

# Service Manual

ORDER NO.  
**RRV2753**

AUDIO/VIDEO MULTI-CHANNEL RECEIVER

# VSX-C301-S

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Type	Power Requirement	Remarks
VSX-C301-S	KUCXU	AC120V	

For details, refer to "Important symbols for good services".

**PIONEER CORPORATION** 4-1, Meguro 1-chome, Meguro-ku, Tokyo 153-8654, Japan

# SAFETY INFORMATION

**This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.**

**A** WARNING

**B** This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

**C** NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

**D** REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

**C** Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

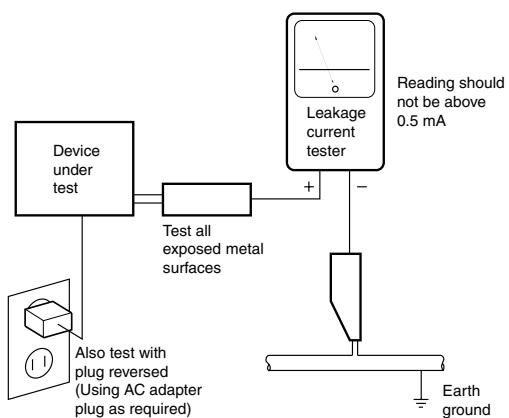

**(FOR USA MODEL ONLY)**

**1. SAFETY PRECAUTIONS**

The following check should be performed for the continued protection of the customer and service technician.

**LEAKAGE CURRENT CHECK**

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

AC Leakage Test

**ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.**

**2. PRODUCT SAFETY NOTICE**

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

**[ Important symbols for good services ]**

In this manual, the symbols shown below indicate that adjustments, settings or cleaning should be made securely. When you find the procedures bearing any of the symbols, be sure to fulfill them:

**1. Product safety**

You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

**2. Adjustments**

To keep the original performances of the product, optimum adjustments or specification confirmation is indispensable. In accordance with the procedures or instructions described in this manual, adjustments should be performed.

**3. Cleaning**

For optical pickups, tape-deck heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

**4. Shipping mode and shipping screws**

To protect the product from damages or failures that may be caused during transit, the shipping mode should be set or the shipping screws should be installed before shipping out in accordance with this manual, if necessary.

**5. Lubricants, glues, and replacement parts**

Appropriately applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount. For replacement parts or tools, the prescribed ones should be used.

# 1. SPECIFICATIONS

## Amplifier section

**Continuous average power output of 28 watts\*** per channel, min., at 6 ohms, from 20 Hz to 20,000 Hz with no more than 0.9 %\*\* total harmonic distortion (front).

## Continuous Power Output (STEREO mode)

Front ..... 28 W + 28 W  
(FTC 20–20 kHz, THD 0.9 %, 6 Ω)

## RMS Power Output

Front ..... 75 W/ch (DIN 1 kHz, THD 10 %, 6 Ω)  
Center ..... 75 W (DIN 1 kHz, THD 10 %, 6 Ω)  
Surround ..... 75 W/ch (DIN 1 kHz, THD 10 %, 6 Ω)

## Audio section

Input (Sensitivity/Impedance) ..... 200 mV/47 kΩ  
Output (Level/Impedance) .....  
DVR/VCR ..... 200 mV/2.2 kΩ

\* Measured pursuant to the Federal Trade Commission's Trade Regulation rule on Power Output Claims for Amplifiers.

\*\* Measured by Audio Spectrum Analyzer.

## Video section

Input (Sensitivity/Impedance) ..... 1 Vp-p/75 Ω  
Output (Level/Impedance) ..... 1 Vp-p/75 Ω

Manufactured under license from Dolby Laboratories.  
"Dolby", "Pro Logic", and the double-D symbol are trademarks of Dolby Laboratories.

"DTS" and "DTS Digital Surround" are trademarks of Digital Theater Systems, Inc.

## FM tuner section

Frequency Range ..... 87.5 MHz to 108 MHz  
Usable Sensitivity ..... Mono: 13.2 dBf, IHF (1.3 μV/75 Ω)  
50 dB Quieting Sensitivity ..... Mono: 20.2 dBf  
Stereo: 38.6 dBf  
signal to noise ratio ..... Mono: 76.0 dB (at 85 dBf)  
Stereo: 72.0 dB (at 85 dBf)  
Distortion ..... Stereo: 0.6 % (1 kHz)  
Alternate Channel Selectivity ..... 60 dB (400 kHz)  
Stereo Separation ..... 40 dB (1 kHz)  
Frequency Response ..... 30 Hz to 15 kHz (±1dB)  
Antenna Input (DIN) ..... 75 Ω unbalanced

## AM tuner section

Frequency Range ..... 530 kHz to 1,700 kHz (10kHz step)  
Sensitivity (IHF, Loop antenna) ..... 350 μV/m  
Selectivity ..... 30 dB  
Signal-to-Noise Ratio ..... 50 dB  
Antenna ..... Loop antenna

## Miscellaneous

Power Requirements ..... AC 120 V, 60 Hz  
Power Consumption ..... 130 W  
In standby ..... 0.3 W  
Dimensions ..... 16 9/16(W) x 2 13/16(H) x 15 1/8 (D) in.  
Weight (without package) ..... 14 lb 6 oz

## Furnished parts

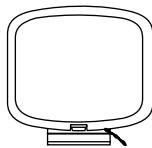

AM loop antenna	..... 1
FM wire antenna	..... 1

• Power Cable  
(ADG7021)

Speaker cable labels  
(ARW7163)

• Remote Control Unit  
(AXD7350)

• Dry Cell Battery (R6P, AA)  
(VEM1030)

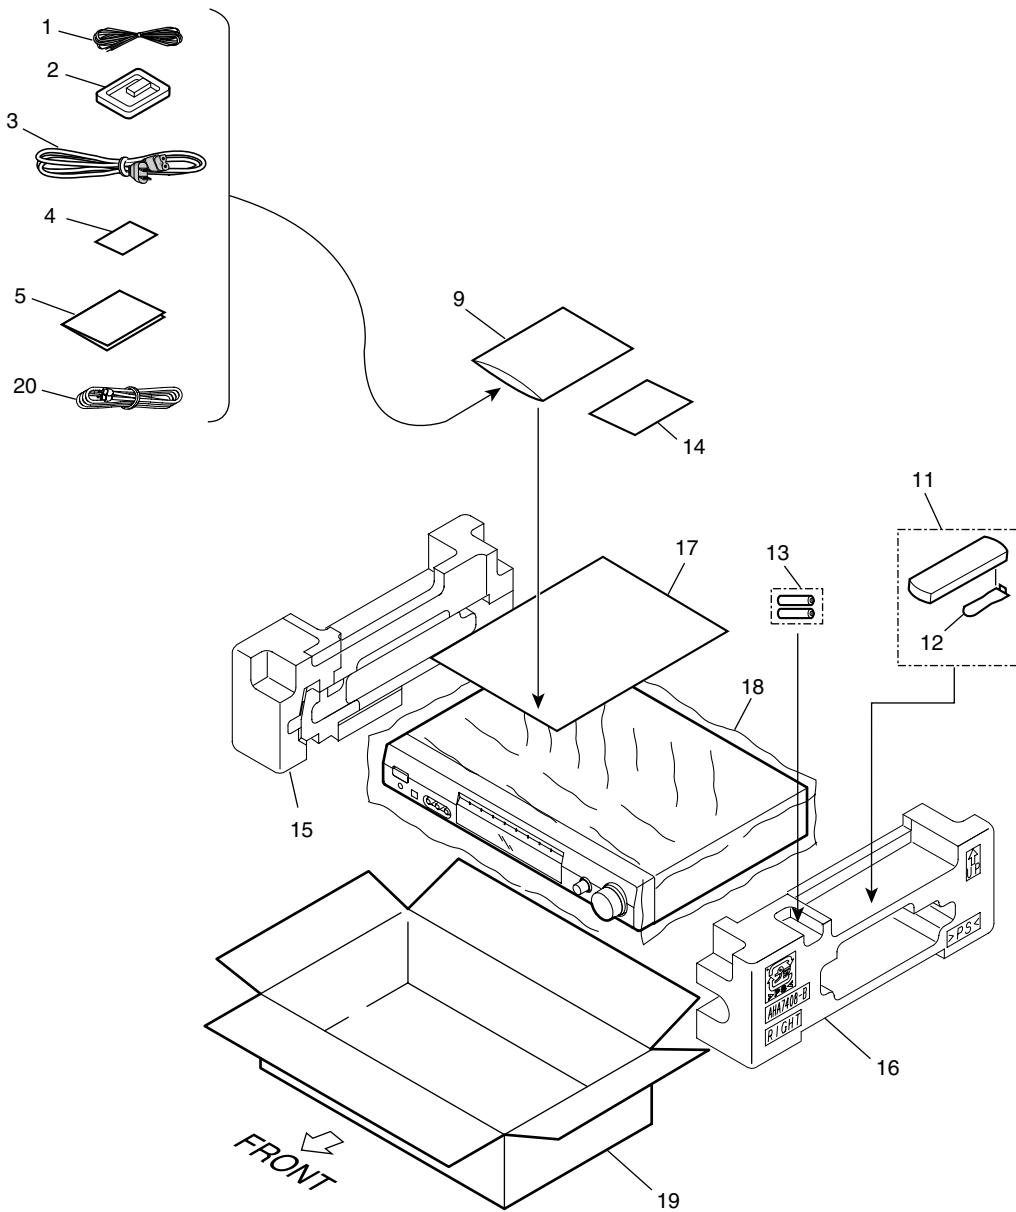

## 2. EXPLODED VIEWS AND PARTS LIST

**A** NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The  $\triangle$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Screws adjacent to  $\nabla$  mark on product are used for disassembly.
- For the applying amount of lubricants or glue, follow the instructions in this manual.  
(In the case of no amount instructions, apply as you think it appropriate.)

## 4. PCB CONNECTION DIAGRAM

### A NOTE FOR PCB DIAGRAMS :

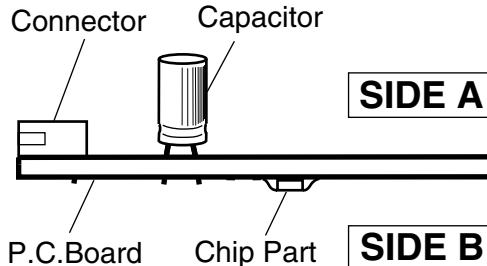

1. Part numbers in PCB diagrams match those in the schematic diagrams.
2. A comparison between the main parts of PCB and schematic diagrams is shown below.

Symbol In PCB Diagrams	Symbol In Schematic Diagrams	Part Name
		Transistor
		Transistor with resistor
		Field effect transistor
		Resistor array
		3-terminal regulator

3. The parts mounted on this PCB include all necessary parts for several destinations.

For further information for respective destinations, be sure to check with the schematic diagram.

4. View point of PCB diagrams.

## 5. PCB PARTS LIST

- NOTES:**
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
  - The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
  - When ordering resistors, first convert resistance values into code form as shown in the following examples.
- Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 $\Omega$	$\rightarrow$	56 $\times 10^1$	$\rightarrow$	561	.....	RD1/4PU [5 6]1J
47k $\Omega$	$\rightarrow$	47 $\times 10^3$	$\rightarrow$	473	.....	RD1/4PU [4 7]3J
0.5 $\Omega$	$\rightarrow$	R50	.....			RN2H [R 5]0K
1 $\Omega$	$\rightarrow$	IRO	.....			RS1P [I R]0K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k $\Omega$	$\rightarrow$	562 $\times 10^1$	$\rightarrow$	5621	.....	RNI/4PC [5 6 2]1F
----------------	---------------	-------------------	---------------	------	-------	-------------------

# 6. ADJUSTMENT

## 6.1 TUNER SECTION

### ■ AM Tuner Section

- There is no adjustment in the AM tuner.

### ■ FM Tuner Section

- Set the mode selector to FM BAND.
- Connect the wiring as shown in Fig. 1.

Step No.	Adjustment Title	ANT. Input level and signal condition			Adjustment	
		Frequency (MHz)	Modulation	Input Level (dB $\mu$ V)	Adjust point	Contents
1	T-METER Adjustment	98	OFF	80	L201	Adjust L201 so that the DC voltage between Pin 21 and Pin 23 of IC201 (Test point Vtm) gets within $0 \pm 50\text{mV}$ .

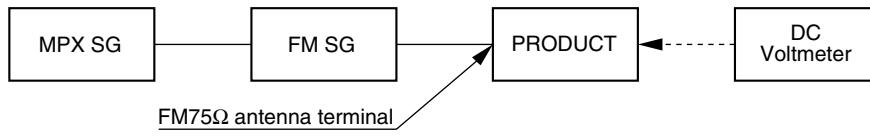

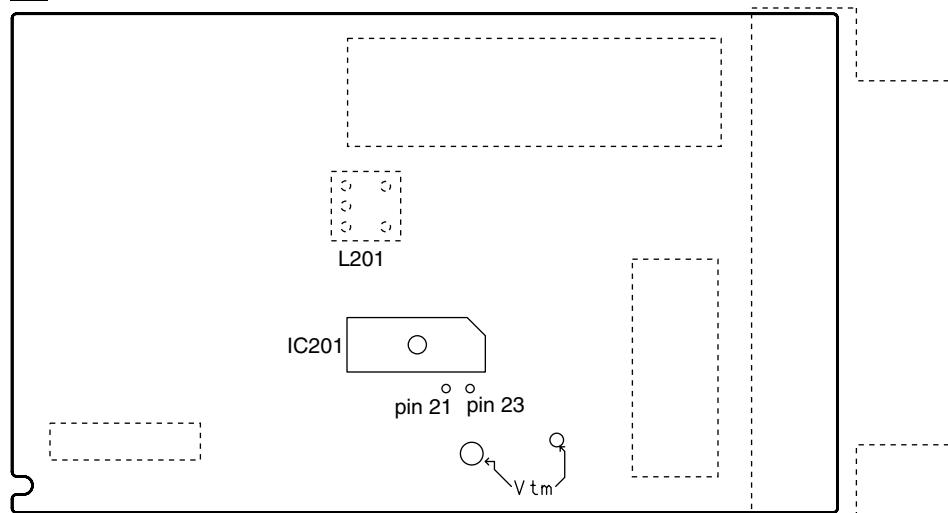

Fig.1 Adjustment Wiring Diagram

### A FM/AM TUNER MODULE

SIDE B

Fig.2 Adjustment Point

# 7. GENERAL INFORMATION

## 7.1 DIAGNOSIS

### 7.1.1 Test Mode

- How to Enter the Test Mode

With the attached Remote Control Unit

#### 1. Test mode ON

#### "MENU" key

When Test mode is entered, "TEST" is indicated for 5 seconds. Settings other than those described below return to the factory-preset values.

- Function: TV/SAT
- Signal select: AUTO
- Settings for the speakers: All large, SW ON
- No automatic speaker detection
- PRO LOGIC2 EMU mode
- The tuner is preset for Test mode.
- SOUND MODE: OFF

The Protection process (Key Mask for 1 min.) is canceled.

#### 2. Test mode OFF

#### "9" key

When the code is received, Test mode is terminated, and all settings return to the factory-preset values.

With "RECEIVER ⌂" key, Test mode is also terminated, and all settings return to the factory-preset values.

#### 3. FL/LED check

#### "0" key

Each time the remote control code is received, the indications on the FL and LED change cyclically, as shown below.

All segments on the FL and LED light. → All segments on the FL and LED go off. → "ABCDEFGHI" are displayed on the FL, and 1, 3, 5, 7 are displayed on the LED. → "IJKLMNOP" are displayed on the FL, and 2, 4, 6, 8 are displayed on the LED. → Usual display → . . .

When the code is first received, all segments light.

#### 4. SP relay change

#### "1" key

Each time the remote control code is received, the SP relay is turned off then back on. When the code is first received, the SP relay is turned off.

#### 5. DOLBY Pro Logic2 mode

#### "2" key

When the code is received, settings other than those described below return to the factory-preset values.

- Function: DVD/LD
- Signal select: AUTO
- Distance of Rear speaker: 5 feet
- STANDARD PRO LOGIC2 EMU mode
- Speaker setting: LLLLY

#### E 7. MASTER VOL CHANGE

#### "4" key

Each time the remote control code is received, the master volume is changed as follows: minus infinity → 0 dB → . . .

Each trim becomes 0 dB.

When the code is first received, the master volume becomes minus infinity (MUTE.)

#### F 8. 9K/10K CHANGE

#### "5" key

For the FL (international) model only, when the code is received, 9K and 10K can be switched.

When the code is first received, 10K is selected.

#### 9. Automatic detection of speakers

#### "7" key

When the remote control code is received, detection of speakers starts automatically. The results (C\_S\_W\_) will be displayed for 5 seconds. The symbol "O" means the speaker is connected, and "X" means the speaker is not connected.

C301: CxSx Wx

#### 10. Analog input check

#### "8" key

When the remote control code is received, Forced Analog Input, and 2-channel STEREO mode are set for all functions.

- Settings for the speakers: All large, SW ON
- When Analog Input Check mode is entered, "SIG:ANA" is displayed for 5 seconds.

#### 11. Digital input check

#### "3" key

When the remote control code is received, Forced Digital Input, and 2-channel STEREO mode are set for all functions.

- Settings for the speakers: All large, SW ON
- When Digital Input Check mode is entered, "SIG:DIG" is displayed for 5 seconds.

#### 12. Version display

#### "1" key

When the code is received, the versions of the main microcomputer, display microcomputer, and DSP are displayed. After the versions of microcomputers are displayed for 5 seconds, DSP version is displayed for 5 seconds.

Examples:

"M011F001": Main microcomputer: Ver. 011, display microcomputer: Ver. 001  
"PPP. 031": DSP: Ver. 031

Note : Test mode of No. 1-12 is Preset ID 150.

Test mode of No. 13, 14 is Preset ID 156.

## 7.1.2 Protection Circuit

### ● DC detection

<b>Detection method</b>	XPROTECT port (A/D)R397: 56 K-ohms Less than 0.6-0.8 Vdd
<b>Detection start time</b>	2.8 sec after
<b>Process</b>	Mute: On Speaker Relay: Off Shifting to STBY after 3 sec
<b>Display</b>	"AMP ERR" flashes for 3 sec
<b>Recovery</b>	Hold the STANDBY key pressed for 10 sec.
<b>Remarks</b>	The unit will recover if the duration of detection is 3 sec or less.

A

### ● Overload detection

<b>Detection method</b>	XPROTECT port (A/D)R363: 27 K-ohms 0.4-0.6 Vdd
<b>Detection start time</b>	2.8 sec after
<b>Process</b>	Mute: On Speaker Relay: Off Shifting to STBY after 3 sec
<b>Display</b>	"OVERLOAD" flashes for 3 sec
<b>Recovery</b>	Press the STANDBY key.
<b>Remarks</b>	

B

C

### ● Fan (temperature) and short-circuit of the power supply circuit

<b>Detection method</b>	XPROTECT port (A/D) 0.4 Vdd or less
<b>Detection start time</b>	1.0 sec after
<b>Process</b>	Mute: On Speaker Relay: Off Shifting to STBY
<b>Display</b>	No display
<b>Recovery</b>	Hold the STANDBY key pressed for 10 sec.
<b>Remarks</b>	

D

### ● Fan stop

<b>Detection method</b>	XPROTECT port (A/D) 0.4 Vdd or less
<b>Detection start time</b>	1.0 sec after
<b>Process</b>	Mute: On Speaker Relay: Off Shifting to STBY
<b>Display</b>	No display
<b>Recovery</b>	Hold the STANDBY key pressed for 10 sec.
<b>Remarks</b>	

E

F

## 7.1.3 Specifications of Speaker Detection

### 1. Purposes

A Automatic detection of connected speakers and automatic selection of settings appropriate for the detected speakers allow you to easily play surround-sound without your making cumbersome speaker settings.

### 2. Speaker detection method

Automatic detection of connected speakers starts 1120 ms after the power is turned on.

- **Detection of the center and surround speakers**

The microcomputer sends a detection signal and reads the logic of the response signal to judge whether the speaker is connected or not. The response signal is read at A/D input, and a voltage of 3 V or more is judged as no speaker connected.

- **Detection of the subwoofer**

The logic of the signal from the phono jack with a switch is read by the microcomputer to judge whether a speaker is connected or not.

### 3. Speaker settings

According to the results of detection, speaker settings are made as shown below.

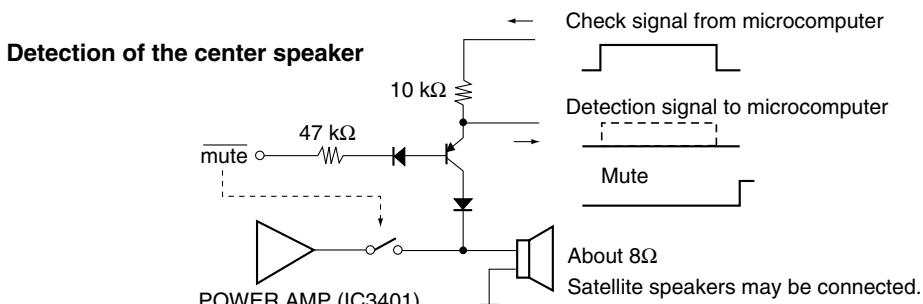

**Rules:** The setting for the front speakers depends on whether a subwoofer is connected or not. If a subwoofer is connected, the setting for the front speakers is "small." Settings for other speakers are "small" or "not connected" depending on the results of detection. Settings for the rear surround speakers are in effect only when surround speakers are connected.

Results of the Detections			Speaker Setting			
Center SP	Surround SP	Sub-woofer	Front SP	Center SP	Surround SP	Sub-woofer
Connected	Connected	Connected	Small	Small	Small	ON
Connected	Connected	Not connected	Large	Small	Small	OFF
Connected	Not connected	Connected	Small	Small	Not connected	ON

## 4 User's settings

More detailed speaker settings can be made in Setup mode. Once the user's settings are made in Setup mode, those settings have priority. However, if the configuration of connected speakers changes, then the detection results become valid and have priority over the user's settings until new user's settings are made.

## 5 Detection circuit for the center speaker

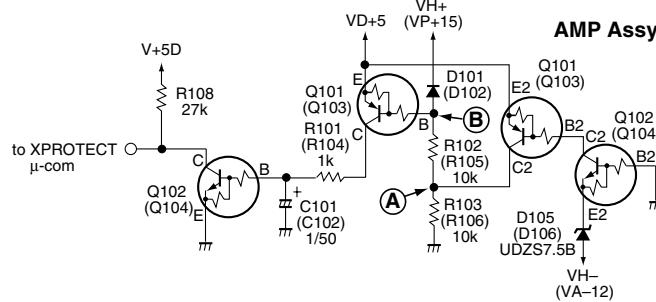

## 7.1.4 Circuit Description

Note: Refer to the Schematic Diagram about the actual circuit.  
(The □ number corresponds to the □ marked circuits.)

### 1 Short-circuit-detection circuit for the amplifier power circuit (+15 V[VP+15], VD+5, -12 V [VA-12])

Circuit for shutting the power off when VP+15, VD+5, or VA-12 is short-circuited to ground (GND)

- In Normal mode, as Q101 (Q103) (E2, B2, C2) and Q102 (Q104) (E2, B2, C2) are on, the voltage at Point A is about 5 V. The voltage at Point B is therefore about the same. As Q101 (Q103) (E, C, B) is off, Q102 (Q104) (E, C, B) is also off.

#### (1) When VH+(VP+15) is short-circuited to GND

As the voltage at Point B becomes almost ground potential, and Q101 (Q103) (E, C, B) then Q102 (Q104) (E, C, B) are turned on, the level of XPROTECT becomes low.

→ The microcomputer detects the XPROTECT level and shuts the power to the unit off.

#### (2) When VH-(VA-12) is short-circuited

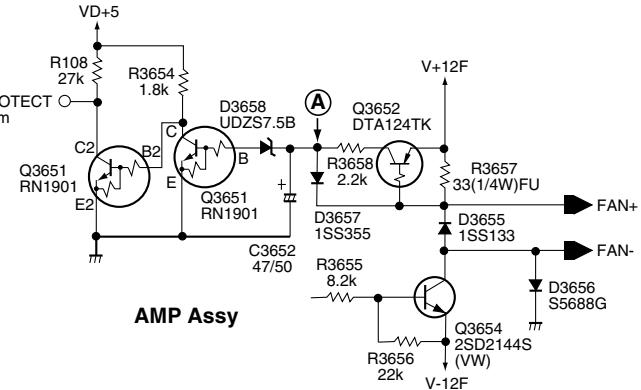

As the electric potential of VE at Q102 (Q104) (E2, C2, B2) becomes the same as that at VB, Q102 (Q104) (E2, C2, B2) is turned off. Following this, Q101 (Q103) (E2, B2, C2) is turned off, which changes the voltage at Points A and B to a value other than 5 V. Therefore, Q101 (Q103) (E, C, B) then Q102 (Q104) (E, C, B) are turned on, the level of XPROTECT becomes low.

→ The microcomputer detects the XPROTECT level and shuts the power to the unit off.

#### (3) When VD+5 is short-circuited

The level of the XPROTECT line becomes low. The microcomputer detects the XPROTECT level and shuts the power to the unit off.

### 2 FAN Detection Circuit

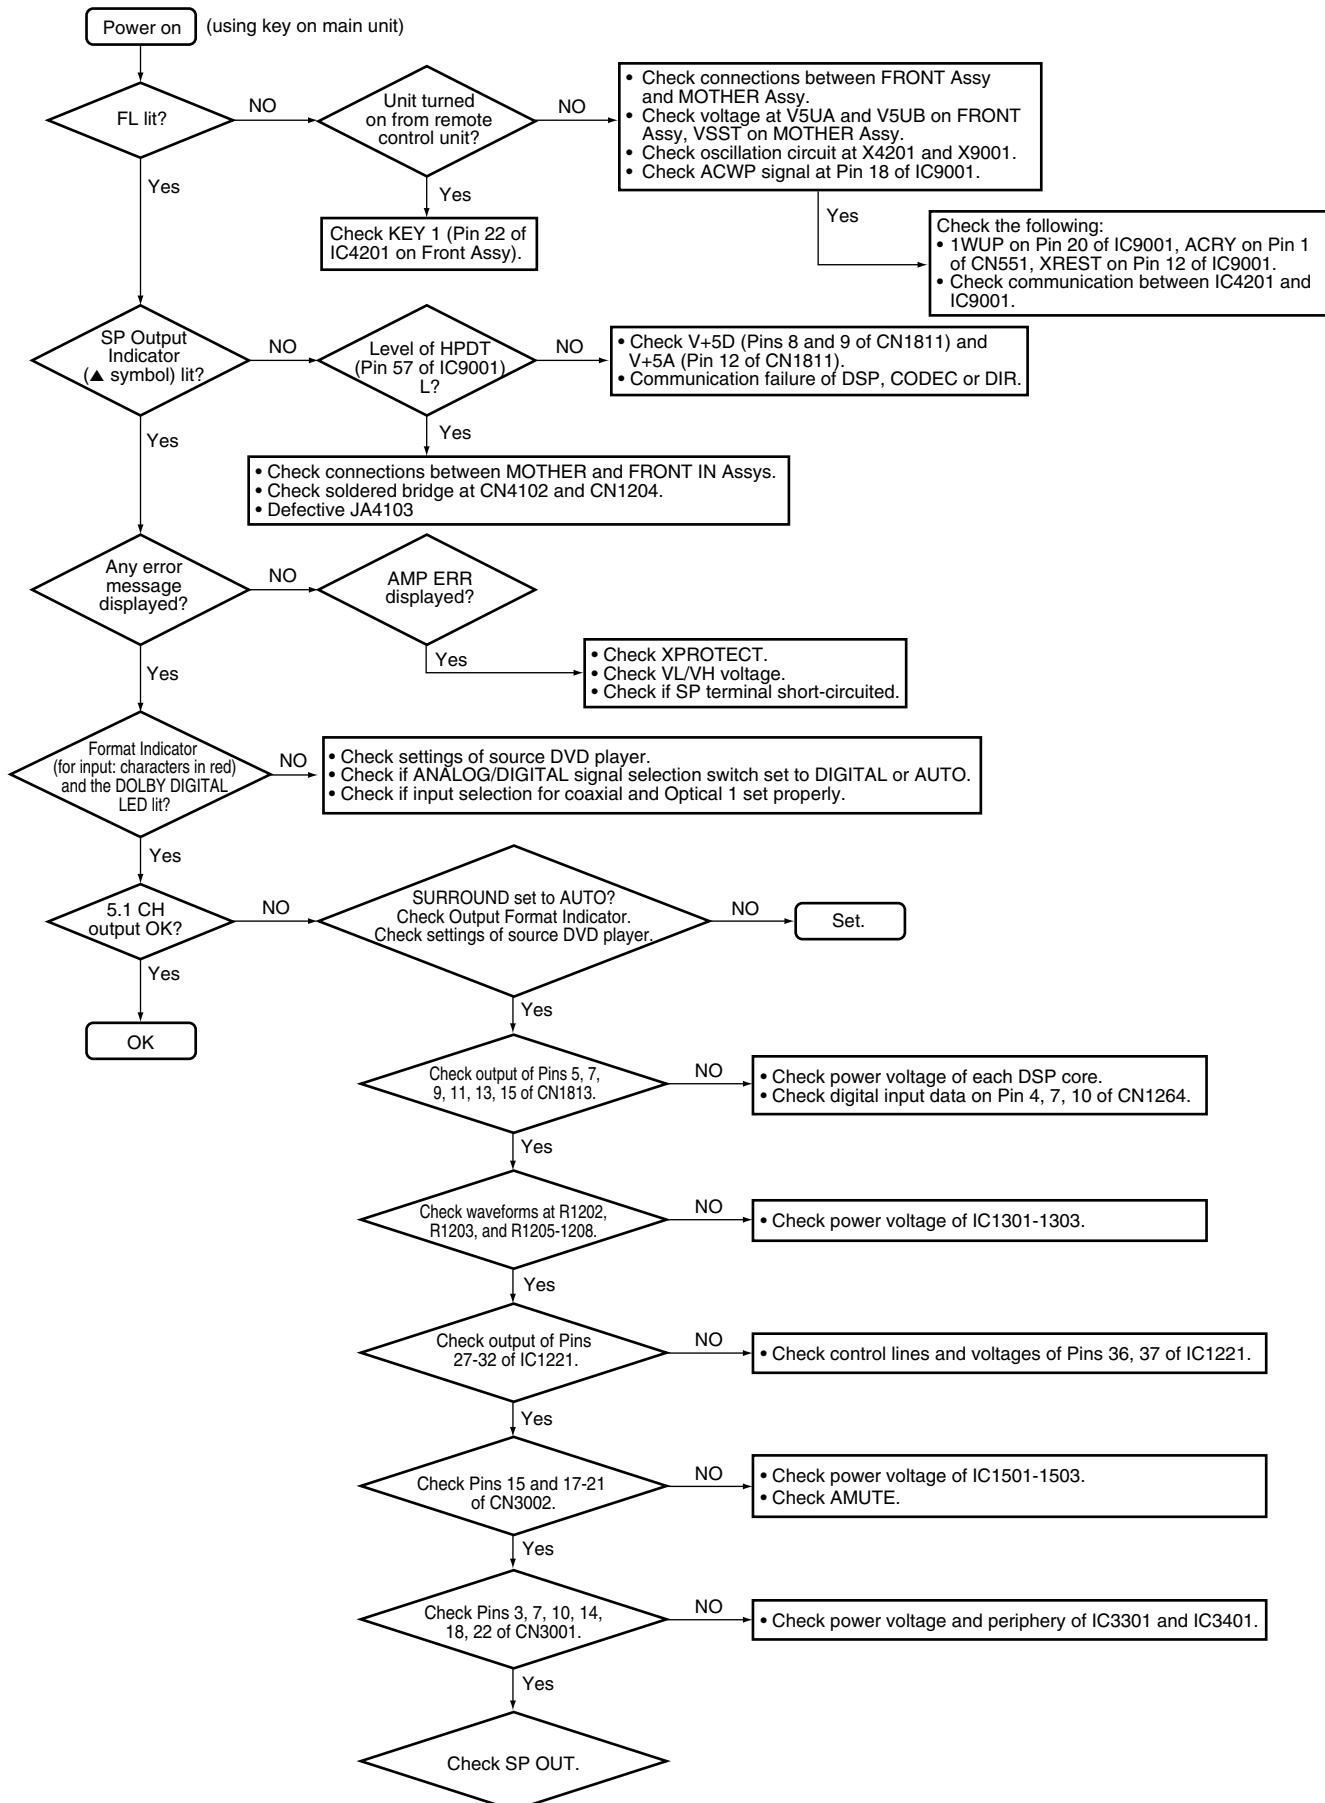

If no fan is connected between FAN+ and FAN-, or when the fan cannot rotate because of a foreign object caught in the blades, the BASE of Q3652 becomes OPEN, and Q3652 and Q3651 (E, C, B) are turned off. Then Q3651 (E2, B2, C2) is turned on, and the level of XPROTECT becomes low.

→ The microcomputer detects the XPROTECT level and shuts the power to the unit off.

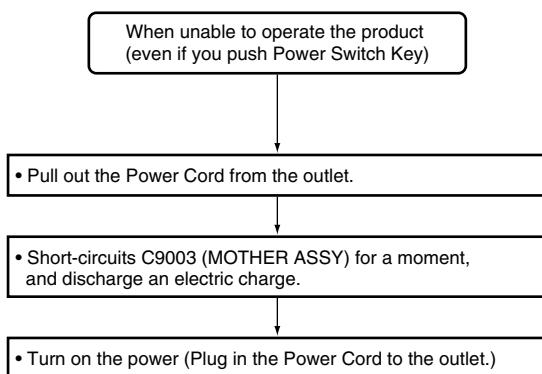

When FAN+ and FAN- are short-circuited, the electric potential at Point (A) becomes higher than GND level by the addition of the values at D3656 and D3657. As this value is lower than that at D3658, Q3651 (E, C, B) is turned off, Q3651 (E2, B2, C2) is turned on, and the level of XPROTECT becomes low.

## 7.1.5 Troubleshooting

## Troubleshooting 2

- This troubleshooting is the repair method when the Microcomputer is hanged up by unexpected use environment.

### 7.3 CLEANING

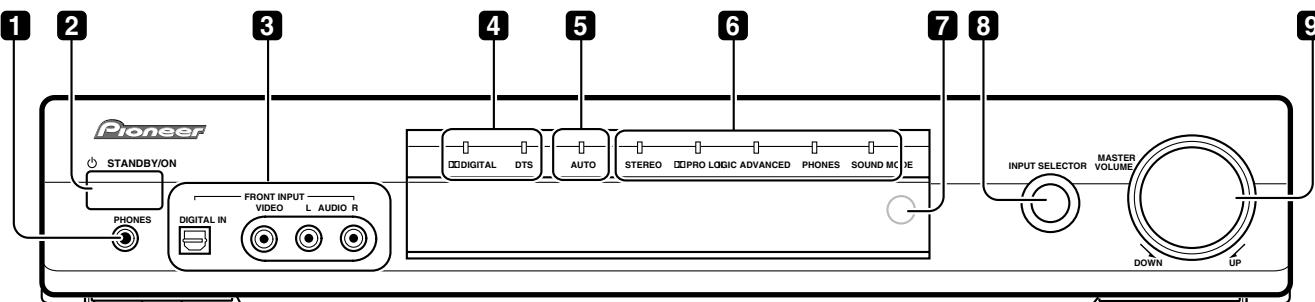

Before shipping out the product, be sure to clean the following positions by using the prescribed cleaning tools:

Position to be cleaned	Cleaning tools
Fans	Cleaning paper : GED-008

## 8. PANEL FACILITIES

### A Front panel

#### 1 PHONES jack

When headphones are connected there is no sound output from the speakers.

#### 2 ⏪ STANDBY/ON button

Press to switch the receiver on or into standby.

#### 3 FRONT INPUT jacks

Use to connect an audio/video component.

#### 4 Digital surround format indicators

##### DIGITAL indicator

Lights when the current source is Dolby Digital.

##### DTS indicator

Lights when the current source is DTS.

#### 5 AUTO indicator

Lights when Auto audio format decoding is selected.

#### 6 Listening mode indicators

##### STEREO indicator

Lights when the source is stereo and/or the listening mode has been set to **STEREO**.

##### PRO LOGIC II indicator

Lights when one of the Dolby Pro Logic II surround modes is active with a 2 channel (stereo) source.

##### ADVANCED indicator

Lights when one of the Advanced Surround modes is active.

##### PHONES indicator

Lights when phones surround mode is active.

##### SOUND MODE indicator

Lights when one of the Sound Modes is active.

#### 7 Remote control sensor

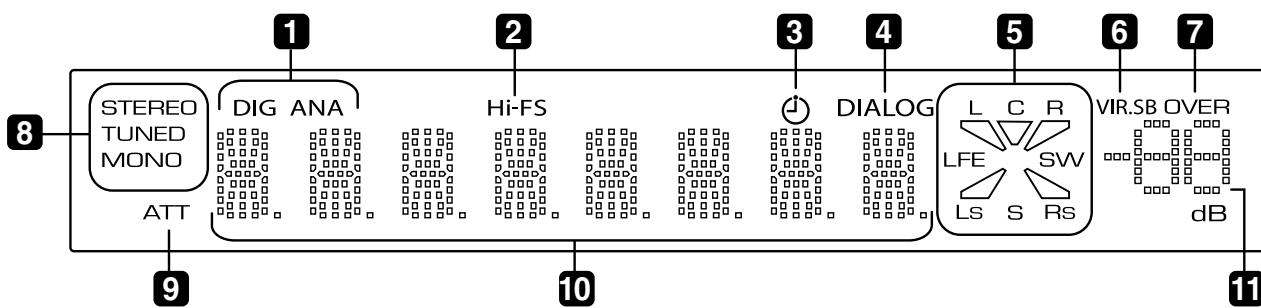

#### 8 INPUT SELECTOR knob

Turn to cycle through the various inputs. The current input is shown in the front panel display.

#### 9 MASTER VOLUME knob

Use to adjust the volume.

## Display

### 1 DIG (digital) / ANA (analog)

Indicates whether the current input source is analog or digital.

### 2 Hi-FS

Lights when the current input signal is 88.2/96 kHz digital.

### 3 Sleep timer indicator

Lights when the sleep timer has been set.

### 4 DIALOG indicator

Lights when Dialog Enhancement is on.

### 5 Input/output channel indicators

The letters **L**, **C**, **R**, **LFE**, **LS** and **Rs** indicate the input channels coming into the receiver. The segments and **SW** (subwoofer) indicate the active speaker output channels. **S** lights in Dolby Surround or Surround Monoaural.

### 6 VIR.SB indicator

Lights when the Virtual Surround Back effect is on.

### 7 OVER

Lights when the input signal is too high, risking distortion. Use the input attenuator to reduce the level.

### 8 Tuner indicators

#### STEREO

Lights when listening to a stereo FM broadcast in auto/stereo mode.

#### TUNED

Lights when tuned to a broadcast.

#### MONO

Lights when the tuner MPX mode is set to mono.

### 9 ATT

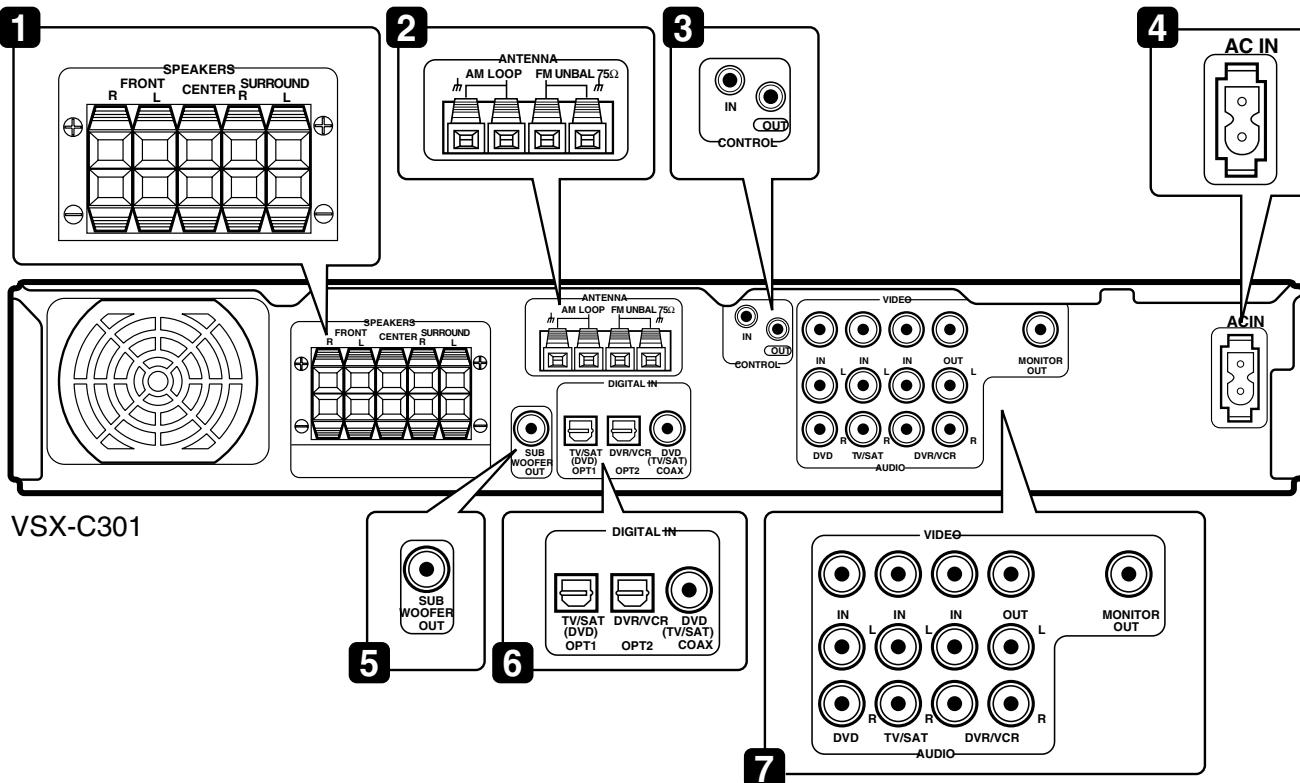

Lights when the input attenuator is on.

### 10 Character display

### 11 Volume level indicator

Indicates the volume level in dB.

## Rear panel

### Important

- Before making or changing the connections, switch off the power and disconnect the power cable from the power outlet.

#### 1 SPEAKERS terminals

FRONT L/R, CENTER and SURROUND L/R speaker terminals.

#### 2 Antenna connections

##### AM LOOP

Connect the supplied AM loop antenna or an outdoor antenna if reception is bad.

##### FM UNBAL 75Ω

Connect the supplied FM wire or an outdoor antenna if reception is bad.

#### 3 CONTROL IN / CONTROL OUT jack

Use to link Pioneer components together to enable all components in the chain to use just one remote control sensor.

#### 4 AC IN

Connect the supplied AC power cable.

#### 5 SUBWOOFER OUT jack

Connect a powered (active) subwoofer.

#### 6 Digital connections

The three digital audio jacks are all inputs. Connect to the digital outputs of digital source components such as DVD, CD and DVR players, satellite receivers, etc.

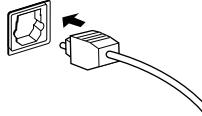

##### TV/SAT(DVD) OPT1 jack

Optical digital audio jack for the **TV/SAT** input (although it is possible to reassign it to the **DVD** input).

#### DVR/VCR OPT2 jack

Optical digital audio jack for the **DVR/VCR** input.

- When connecting optical cables, be careful when inserting the plug not to damage the shutter protecting the optical socket.

- When storing optical cable, coil loosely. The cable may be damaged if bent around sharp corners.

#### DVD(TV/SAT) COAX jack

Coaxial digital audio jack for the **DVD** input (although it is possible to reassign it to the **TV/SAT** input).

#### 7 Audio/Video input/output jacks

##### DVD IN jacks

Jack connections for the **DVD** input.

##### TV/SAT IN jacks

Jack connections for the **TV/SAT** input.

##### DVR/VCR IN/OUT jacks

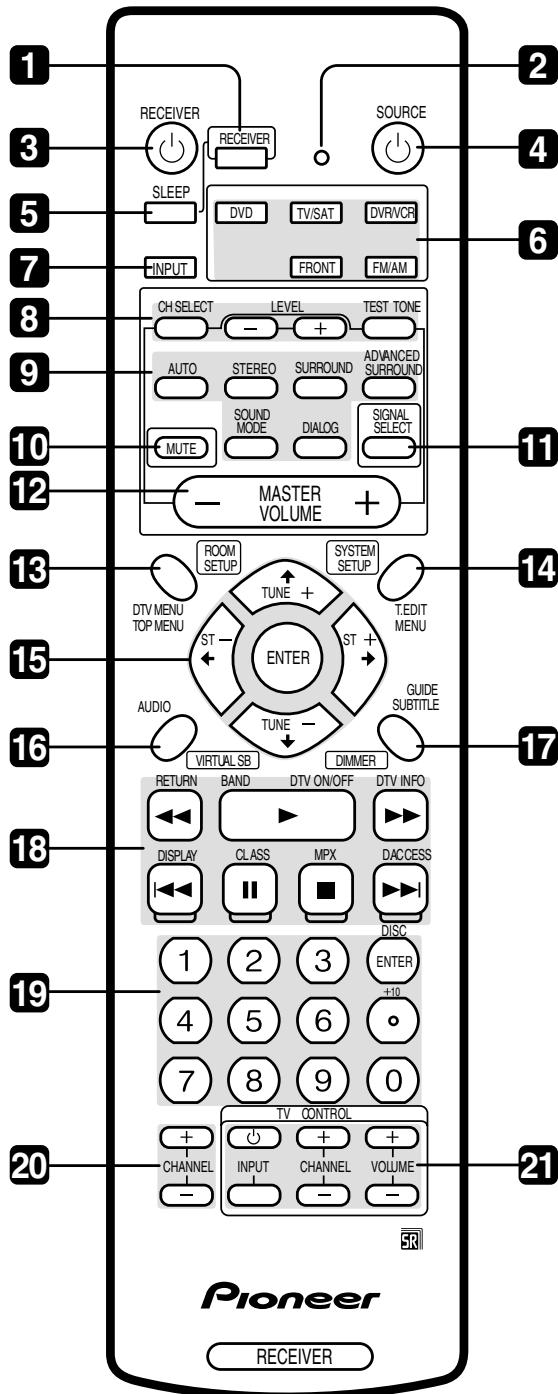

AV connector for the **DVR/VCR** input. When the receiver is set to any other input, that signal is output from the **DVR/VCR IN/OUT** jacks.

##### MONITOR OUT video jack

Jack connection for your TV.

## Remote control

Function names printed in green on the remote control are receiver-related functions. Function names printed in blue are for the built-in tuner (see Using the tuner). Other functions relate to other equipment that you can control using this remote. See also Controlling other equipment.

### 1 RECEIVER

Press to put the remote in 'receiver' mode (i.e., the remote controls the receiver functions).

### 2 LED

Indicates a remote control operation.

### 3 RECEIVER

Press to switch the receiver on or into standby.

### 4 SOURCE

Press to switch the current source component on or into standby.

### 5 SLEEP

Use to set the sleep timer.

### 6 Input/remote control mode select buttons

When the Remote Direct function is set to on, these buttons (except **FM/AM**) change the remote mode and the receiver input simultaneously. When set to off, they only switch the remote mode (see also Remote Direct function).

### 7 INPUT

Press to cycle through the various inputs. The current input is shown in the front panel display.

#### DVD

Press to select **DVD** as the current input.

#### TV/SAT

Press to select **TV/SAT** (set-top box) as the current input.

#### DVR/VCR

Press to select **DVR/VCR** as the current input.

#### FRONT

Press to select **FRONT** (the front panel audio/video inputs) as the current input.

#### FM/AM

Press to select **FM/AM** (the built-in tuner) as the current input.

### 8 Channel setup buttons

#### CH SELECT

Use to select the speaker channel to adjust.

#### LEVEL +/-

Use to adjust the output level of the current speaker channel.

#### TEST TONE

Press to start/stop the test tone.

### 9 Sound buttons

#### AUTO

Press to select the **AUTO** (default) sound for the current source (stereo, Dolby Digital, DTS, etc.) and switch off all other sound processing.

#### STEREO

Press to hear the current source in stereo.

#### SURROUND

Use to select a **SURROUND** mode for the current source.

#### ADVANCED SURROUND

Use to select an **ADVANCED SURROUND** mode for the current source.

**SOUND MODE**

Use to select a **SOUND MODE** for the current source.

**DIALOG**

Press to switch on/off **DIALOG** (dialog enhancement).

**10 MUTE**

Press to mute all output. Press again (or adjust the volume using the **MASTER VOLUME** control) to restore the sound.

**11 SIGNAL SELECT**

Use to select the analog or digital signal for the **DVD**, **TV/SAT**, **DVR/VCR** and **FRONT** inputs.

**12 MASTER VOLUME**

Use to adjust the volume.

**13 ROOM SETUP**

Use to select a preset room setup.

**14 SYSTEM SETUP**

Press to access the **SYSTEM SETUP** menu to make detailed receiver settings.

**15 Cursor keys and ENTER**

Use to navigate menus and select options/execute commands.

**16 VIRTUAL SB**

Press to switch on/off the virtual surround back mode.

**17 DIMMER**

First press **RECEIVER**, then press **DIMMER** repeatedly to change the brightness/switch off the front panel display. The display will light brightly for about two seconds when you operate the receiver with the display off or dimmed. (Note that the master volume indicator always remains lit, even when the rest of the display is off.)

**18 Playback controls**

Playback controls for external components, such as DVD and CD players.

Functions printed in blue control the built-in tuner; other functions control other external equipment.

**19 Number buttons**

Use for numerical input of track numbers, radio frequencies, and so on.

**20 CHANNEL +/–**

Use to change channels on a satellite receiver, cable box, VCR or DVR.

**21 TV CONTROL buttons**

Use to control your TV (after setting up the remote control to work with your TV).

**Clearing preset codes**

This restores all presets to the factory defaults. See Using the remote control with other components for the default remote settings.

- Press **RECEIVER** and number button '0' (zero) at the same time. Keep them pressed for about 3 seconds.

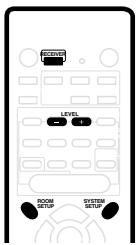

The LED on the remote control blinks three times indicating all the preset codes have been cleared.

The default preset codes are shown in the table.

Input/control mode select button	Preset code	Component (manufacturer)
<b>DVD</b>	020	DVD (Pioneer)
<b>TV/SAT</b>	200	STB (Pioneer)
<b>DVR/VCR</b>	466	DVD recorder (Pioneer)
<b>FRONT</b>	100	LD (Pioneer)
<b>FM/AM</b>	n/a	(built-in tuner)
<b>TV CONTROL</b>	600	TV (Pioneer)

## Resetting the system

Use this feature to reset the system to its factory default settings.

**1 Press RECEIVER.**

**2 In standby, press ROOM SETUP and SYSTEM SETUP at the same time.**

The display prompts you to confirm.

**3 Within 5 seconds, press LEVEL -.**

The display shows **OK**.

**4 Within 5 seconds, press LEVEL +.**

The receiver should now be reset.

### Note

- If the receiver is disconnected from the power outlet for more than a month it will reset to the default settings.
- The above reset doesn't affect the presets that you have programmed into the remote control (see Using the remote control with other components).

## Default receiver settings

The table below shows the factory default settings. When you reset the system, the receiver reverts to these defaults (see Resetting the system).

Setting type	Default setting
Input	DVD
Master volume	— — dB (no sound)
Listening mode	AUTO (all inputs)
Listening mode (w/ headphones)	STEREO (all inputs)
Sound mode	OFF
Dialog	OFF
Virtual Surround Back	OFF
Input signal select	AUTO
Speakers (Front, Center, Surround) Setting	Automatically sensed
Subwoofer setting	200 Hz
LFE Attenuator	0 dB
Front speaker distance	10 ft.
Center speaker distance	10 ft.
Surround speaker distance	10 ft.
Dynamic Range Control	OFF
Dual Mono	ch1
Input Attenuator	OFF (all inputs)
DVD(TV/SAT) COAX jack assignment	DVD
TV/SAT(DVD) OPT1 jack assignment	TV/SAT
Setting the volume level of each channel	Front: 0 dB Center: 0 dB Surround: 0 dB Subwoofer: 0 dB
Room Setup	M / MID

### Note

- The default settings for the remote control to control other components can be found in Using the remote control with other components.
