SHARP ELECTRONICS OF CANADA LTD.

335 Britannia Road East Mississauga, Ontario L4Z 1W9 Canada

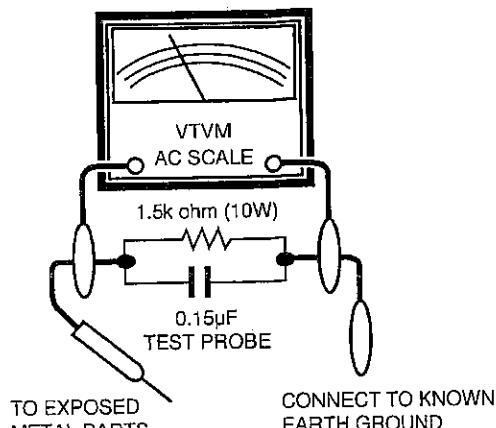

1. IMPORTANT SERVICE NOTES

BEFORE RETURNING THE VIDEO CAMERA RECORDER

Before returning the video camera recorder to the user, perform the following safety checks.

1. Inspect all lead dress to make certain that leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the video camera recorder.
2. Inspect all protective devices such as non-metallic control knobs, insulating materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor/capacitor networks, mechanical insulators etc.
3. To be sure that no shock hazard exists, check for leakage current in the following manner.
 - Plug the AC line cord directly into a 120 volt AC outlet (Do not use an isolation transformer for this test).
 - Using two clip leads, connect a 1.5k ohm, 10 watt resistor paralleled by a 0.15µF capacitor in series with all exposed metal cabinet parts and a known ground, such as a water pipe or conduit.
 - Use a VTVM or VOM with 1000 ohm per volt, or higher sensitivity or measure the AC voltage drop across the resistor (See Diagram).
 - Move the resistor connection to all exposed metal parts having a return path to the chassis (antenna connec-

tions, metal cabinet, screw heads, knobs and control shafts, etc.) and measure the AC voltage drop across the resistor. Reverse the AC plug (a non polarized adaptor plug must be used but only for the purpose of completing these checks) on the set and repeat the AC voltage measurements for each exposed metallic part. Any reading of 0.45V rms (this corresponds to 0.3mA rms AC.) or more is excessive and indicates a potential shock hazard which must be corrected before returning the video camera recorder to the user.

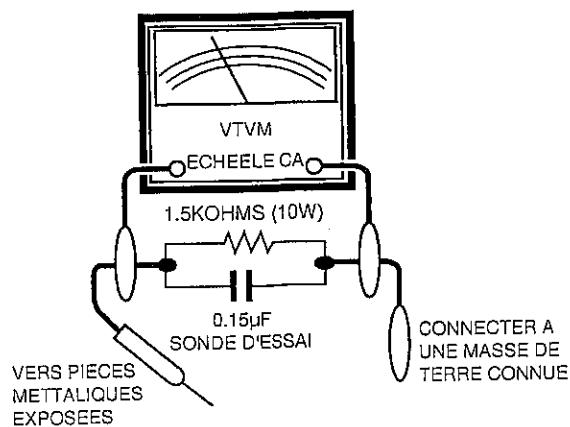

1. NOTES DE SERVICE IMPORTANTES

AVANT DE RENDRE LE MAGNETOSCOPE

Avant de rendre le magnétoscope à l'utilisateur, effectuer les vérifications de sécurité suivantes.

1. Vérifier toutes les gaines de fil pour être sûr que les fils ne sont pas pincés ou que le matériel n'est pas coincé entre le châssis et les autres pièces métalliques dans le magnétoscope.
2. Vérifier tous les dispositifs de protection tels que les boutons de commande non métalliques, les matériaux d'isolement, le dos du coffret, les couvercles de compartiment et ajustement ou les boucliers, les réseaux de résistance/condensateur d'isolement, les isolateurs mécaniques, etc.
3. Pour être sûr qu'il n'y a aucun risque de choc électrique, vérifier le courant de fuite de la manière suivante.
 - Brancher le cordon d'alimentation secteur directement dans une prise de courant de 120 volts. (Ne pas utiliser de transformateur d'isolement pour cet essai).
 - Utiliser deux fils à pinces et connecter une résistance de 10 watts 1,5 kohm en parallèle avec un condensateur de 0,15 µF en série avec des pièces du coffret métallique exposées et une masse de terre connue telle qu'un tuyau ou un conduit d'eau.
 - Utiliser un VTVM ou VOM avec une sensibilité de 1000 ohms par volt ou plus ou mesurer la chute de tension CA entre la résistance (voir diagramme).
 - Déposer la connexion de la résistance à toutes les

pièces métalliques exposées ayant un parcours de retour au châssis (connexions d'antenne, coffret métallique, têtes de vis, boutons et arbres de commande, etc.) et mesurer la chute de tension CA entre la résistance. Inverser la fiche CA (une fiche intermédiaire non polarisée doit être utilisée à seule fin de faire ces vérifications.) sur l'appareil et répéter les mesures de tension CA pour chaque pièce métallique exposée. Toute lecture de 0,45 V rms (ceci correspond à 0,3 mA rms CA) ou plus est excessive et signale un danger de choc qui doit être corrigé avant de rendre le magnétoscope à son utilisateur.

WARNING : TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO WET LOCATIONS.

CAUTION

RISK OF ELECTRIC SHOCK
DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER. NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

This symbol warns the user of uninsulated voltage within the unit that can cause dangerous electric shocks.

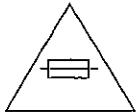

This symbol alerts the user that there are important operating and maintenance instructions in the literature accompanying this unit.

CAUTION

This symbol mark means following.

For continued protection against fire hazard, replace only with same type fuse.
(CP900; 2.5A 72V; CP901; 2.5A 72V,
CP902; 2.5A 72V; CP905; 2.5A 72V)

Camcorder
only

**ATTENTION: POUR REDUIRE LES RISQUES D'INCENDIE OU DE CHOC ELECTRIQUE,
NE PAS EXPOSER CET APPAREIL A LA PLUIE OU A L'HUMIDITE.**

ATTENTION

RISQUE DE CHOC ELECTRIQUE
NE PAS OUVRIR

ATTENTION: AFIN DE REDUIRE LES RISQUES DE CHOC ELECTRIQUE,
NE PAS RETIRER LE COUVERCLE, AUCUN ORGANE
INTERNE NE PEUT ETRE REPARÉ PAR L'UTILISATEUR,
CONFIER L'APPAREIL A UN DÉPANNEUR QUALIFIÉ.

Ce symbole signale à l'utilisateur la présence d'une tension non isolée à l'intérieur de l'appareil qui peut être la cause de secousses électriques dangereuses.

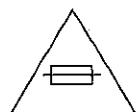

Ce symbole avertit l'utilisateur que des instructions importantes relatives à l'utilisation et à l'entretien se trouvent dans le manuel accompagnant l'appareil.

RECAUTION

Cette marque indique comme suit. Pour la protection continue contre le risque d'incendie, ne remplacer que par le fusible de même type.

(CP900; 2.5A 72V; CP901; 2.5A 72V,
CP902; 2.5A 72V; CP905; 2.5A 72V)

Caméscope
seulement

 **CAUTION**
BEFORE BATTERY DESTROY

■ **NICKEL-CADMIUM BATTERY**

The following program is available in the United States. Please consult local environmental authorities concerning the availability of this or other programs in your area.

The RBRC™ Seal

SHARP participates in the RBRC™ Nickel-Cadmium Battery Recycling Program in the United States. The RBRC™ Seal on our battery pack contained in our product indicates that SHARP is voluntarily participating in an industry program to collect and recycle these batteries. The RBRC™ program provides you with a convenient alternative to placing spent Nickel-Cadmium battery packs into the trash or municipal waste stream, which is illegal in some areas. At the end of their useful life, the Nickel-Cadmium battery can be dropped off at the nearest collection center for recycling. For information on the nearest collection center, call 1-800-8-BATTERY or your local recycling center. If you are located outside the United States, contact your local authorities for information concerning proper disposal and/or recycling of this battery. SHARP's involvement in this program is part of our commitment to protecting our environment and conserving natural resources.

[Footnote] RBRC™ is a trademark of the Rechargeable Battery Recycling Corporation.

- **NICKEL-METAL HYDRIDE BATTERY**
- **LITHIUM or LITHIUM-ION BATTERY**
- **SEALED LEAD BATTERY**

Battery disposal

Contains the above (Rechargeable) Battery. Must be recycled or disposed of properly. Remove the Battery from the products and contact Federal or State Environmental Agencies for information on recycling and disposal options.

2. SPECIFICATIONS

Signal System: NTSC standard
 Recording System: 2 rotary heads, helical scanning system
 Cassette: Digital VCR Mini DV video cassette
 Recording/Playback Time: 60 minutes (DVM60)
 Tape Speed: 18.81 mm/second
 Pickup Device: 1/4" (6.4mm, effective size: 4.5 mm) CCD image sensor (with approx. 410,000 pixels including optical black)
 Lens: 12 × power zoom lens (F1.8, f=4.2-50.4 mm), full-range auto focus
 Lens Filter Diameter: 37 mm
 Monitor: 4" (10.1 cm)—full-color LCD screen (TFT active matrix)
 Microphone: Electret stereo microphone
 Color Temperature Compensation: Auto white balance with white balance lock
 Minimum Illumination: 5 lux* (with gain-up, and digital zoom off)
 Video Output Level: 1.0 Vp-p 75-ohm unbalanced
 Audio Output Level: -8 dBs, impedance less than 2.2k ohms
 Speaker Output: 300 mV
 External Microphone Input: 3.5 mm diameter mini-plug, -66 dBs, output impedance 6.8k ohms, DC4V, for plug-in power microphone use
 Power Requirement: DC 3.6 V
 Power Consumption: 8.9 W (during camera recording in full auto mode with zoom motor off, backlight in normal mode)
 Operating Temperature: 0°C to + 40°C (32°F to 104°F)
 Operating Humidity: 30% to 80%
 Storage Temperature: -20°C to +60°C (-4°F to 140°F)
 Dimensions (approx.): 7 1/8" (W) × 3 7/8" (H) × 3 15/32" (D)
 [181 mm (W) × 99 mm (H) × 88 mm (D)]
 Weight (approx.): 1.52 lbs (690 g)
 (without battery pack, lithium cell, video cassette)

AC Adapter/Battery Charger

Power Requirement: AC 100-240 V, 50/60 Hz
 DC Output: 4.5 V
 Power Consumption: 25 W
 Dimensions (approx.): 4 3/4" (W) × 2" (H) × 4" (D)
 [120 mm (W) × 51 mm (H) × 101.5 mm (D)]
 Weight (approx.): 0.86 lbs (390 g)

Battery Pack BT-L2

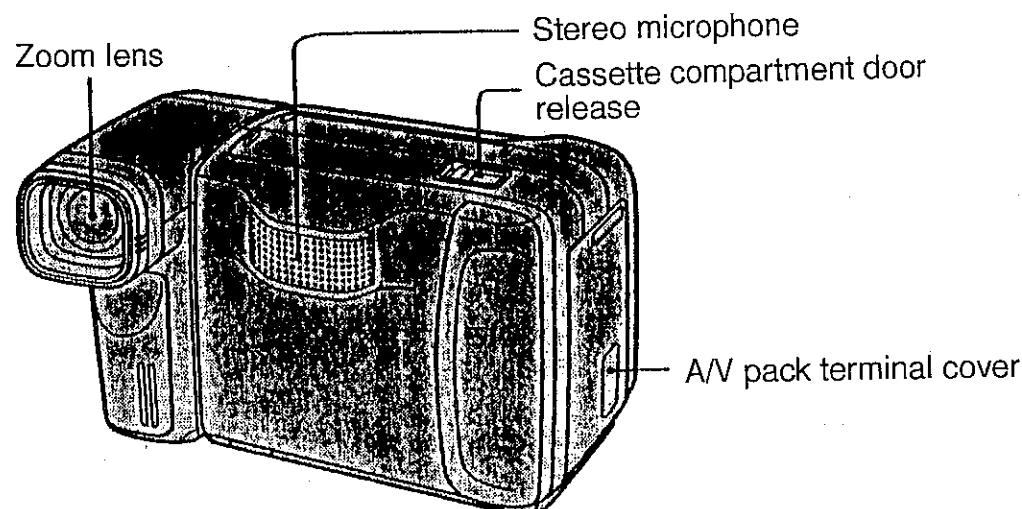

DC Output: 3.6 V
 Dimensions (approx.): 1 1/2" (W) × 1" (H) × 2 13/16" (D)
 [37.4 mm (W) × 25.0 mm (H) × 71.2 mm (D)]
 Weight (approx.): 0.22 lbs (100 g)

Specifications are subject to change without notice.

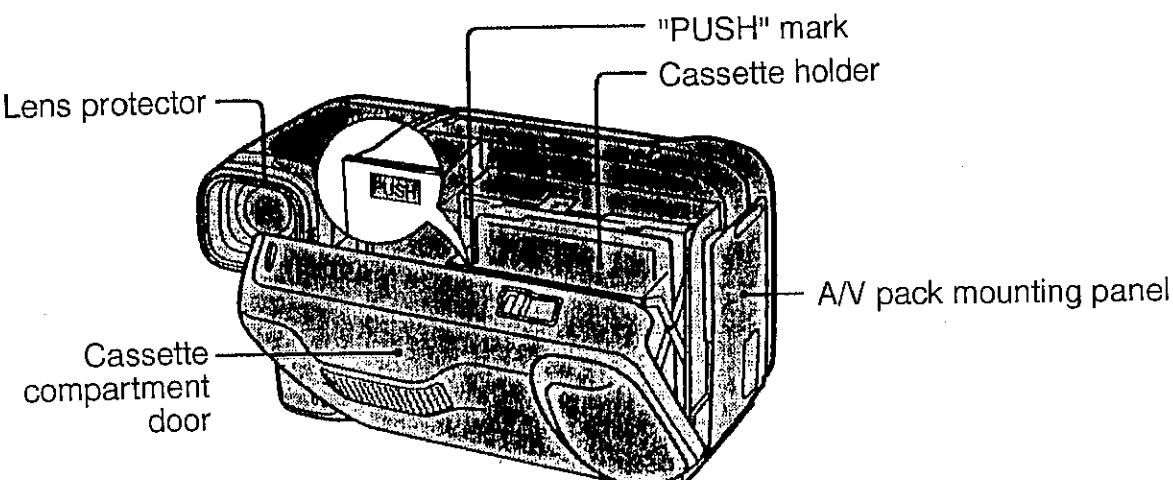

*Minimum illumination: Since there is no widely accepted testing procedure for determining minimum illumination capability, lux ratings are comparable only between models from the same manufacturer.

3. NAMES OF PARTS

Front view

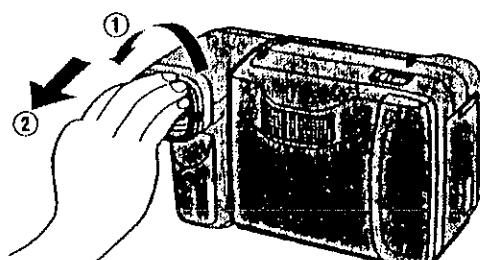

When the cassette compartment door is opened

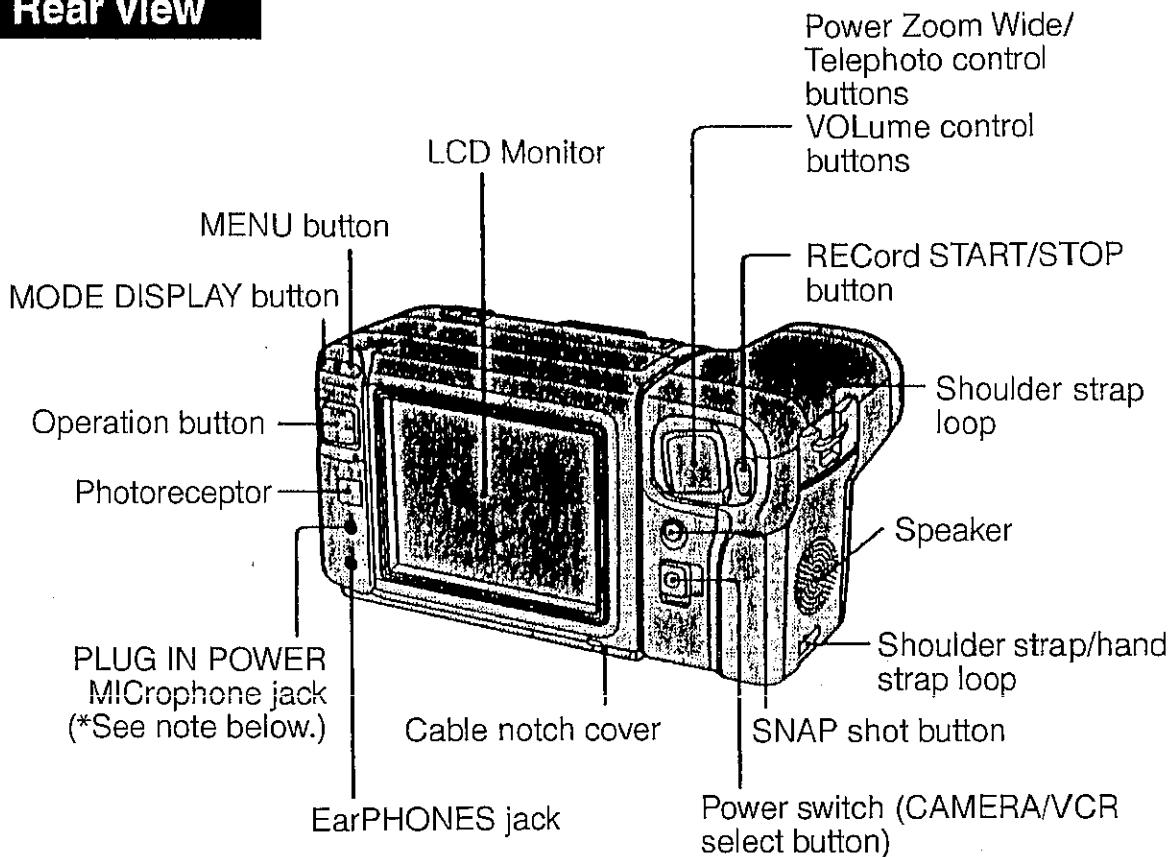

Removing the Lens Protector

Before mounting the optional wide or telephoto conversion lens, remove the lens protector by turning it counter-clockwise.

Rear view

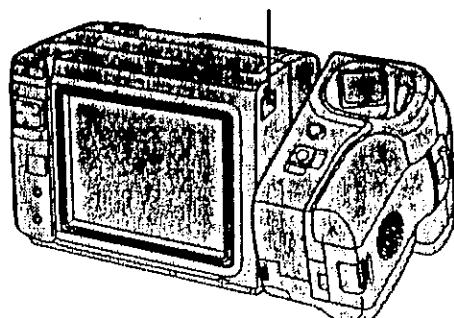

*About the PLUG IN POWER MIC jack

This external microphone jack outputs a DC voltage of 4.0V. It is for use with the microphone supplied with sports case optional accessory for this VIEWCAM, or with any 2.5 – 4.0 volt DC use condensertype microphone with a 3.5 mm diameter plug. The use of other types of microphones may result in damage to the microphone or the VIEWCAM.

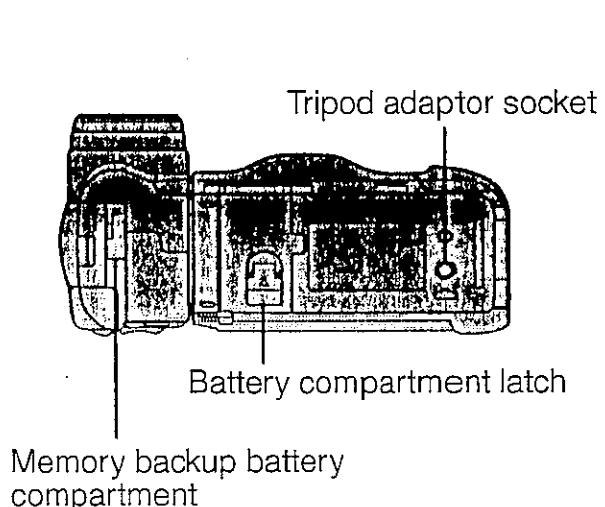

Side view

When camera module is rotated

Fluorescent lamp compartment

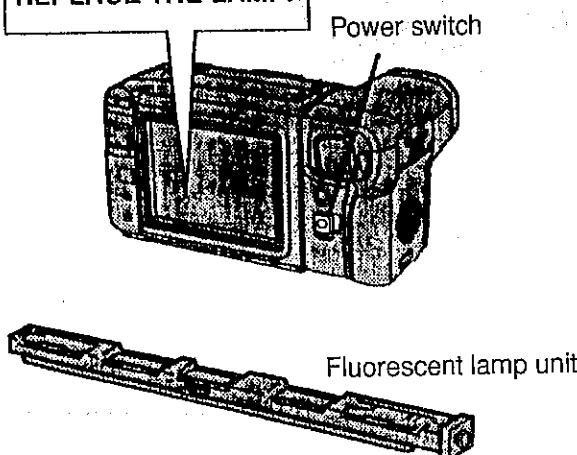

Bottom view

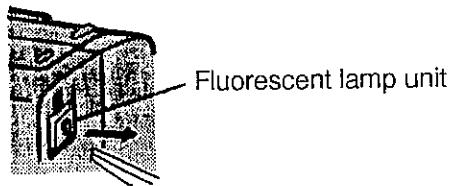

Fluorescent Lamp Backlight

The fluorescent lamp backlight used in this VIEWCAM will eventually need replacing. If you continue to use the VIEWCAM when the fluorescent lamp has almost reached the end of its service life, the "REPLACE THE LAMP" indicator will be displayed on the monitor for approximately one minute. When this occurs, purchase a replacement lamp (KLAMPV0018TAZZ) from your dealer or SHARP Full Line Parts Distributor, and replace the old lamp.

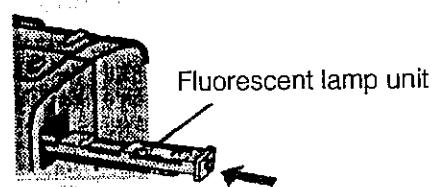

REPLACE THE LAMP.

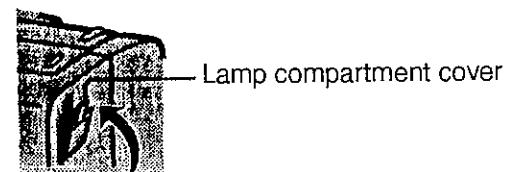

- 4** Carefully hold the end (white knob) of the lamp unit with tweezers, and pull it out.

- 5** Insert the replacement lamp unit into the compartment. See note below.

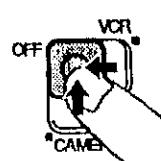

- 6** Replace the fluorescent lamp compartment cover.

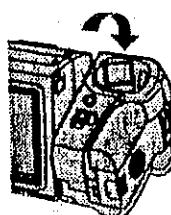

Replacing the Fluorescent Lamp Backlight

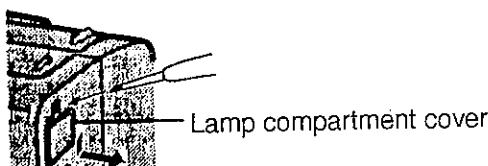

- 1** Set the Power switch to OFF to turn off the VIEWCAM, and wait about 15 minutes for the lamp unit cool down.

- 2** Rotate the camera module of the VIEWCAM halfway forward as shown.

- 3** Remove the lamp compartment cover: insert a pointed object such as the point of a pen into the opening above the cover, push the cover release "□" down, and then pull off the cover.

Notes:

- In step 5 above, be sure to insert the replacement fluorescent lamp straight in, in the direction of the arrow, into the compartment. Do not press diagonally as it may cause contact failure.
- The fluorescent light may flicker when first turned on. Should this occur, turn off the VIEWCAM, and then turn it on again.
- When used in cold locations, the fluorescent lamp may lose some of its brightness.
- Remove the battery pack before replacing the fluorescent lamp.

Caution:

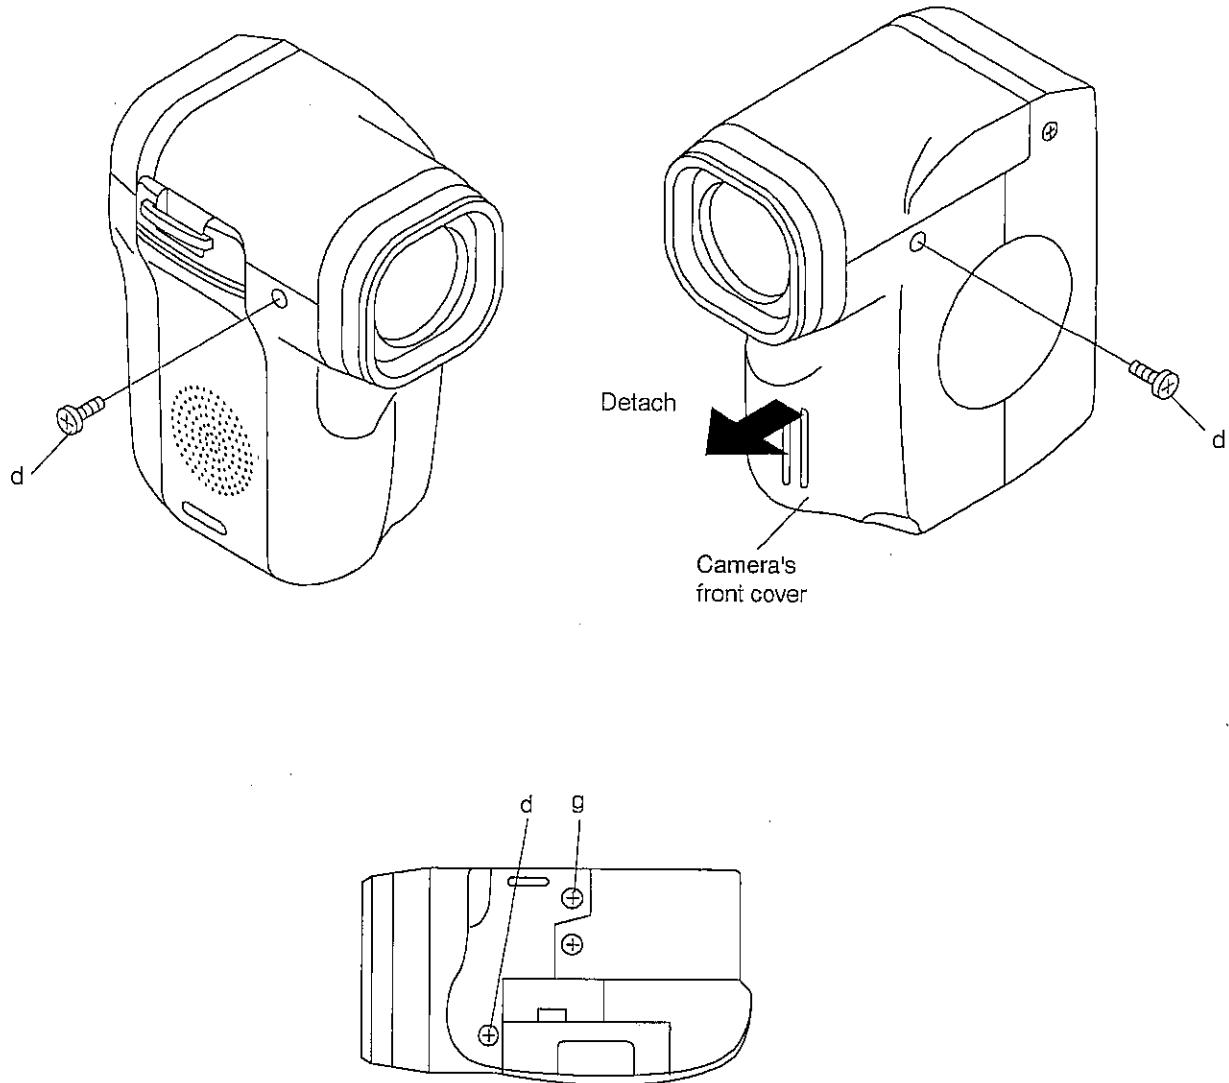

- The fluorescent lamp is hot during and immediately after use of the VIEWCAM. Wait at least 15 minutes after turning the power off before attempting to change the lamp, to allow time for it to cool down. Attempting to change the lamp unit while it is still hot may result in burns or other injuries.

4. DISASSEMBLING THE SET

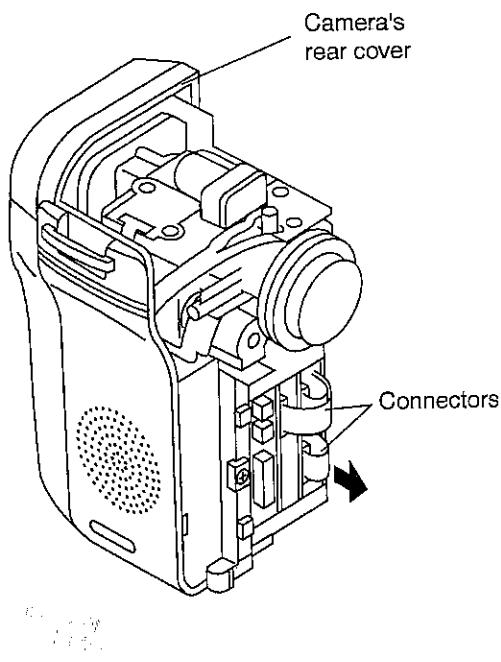

4-1. Removing the camera unit

Caution: Before detaching the covers, be sure to turn off the power and make sure that there is no battery inside.

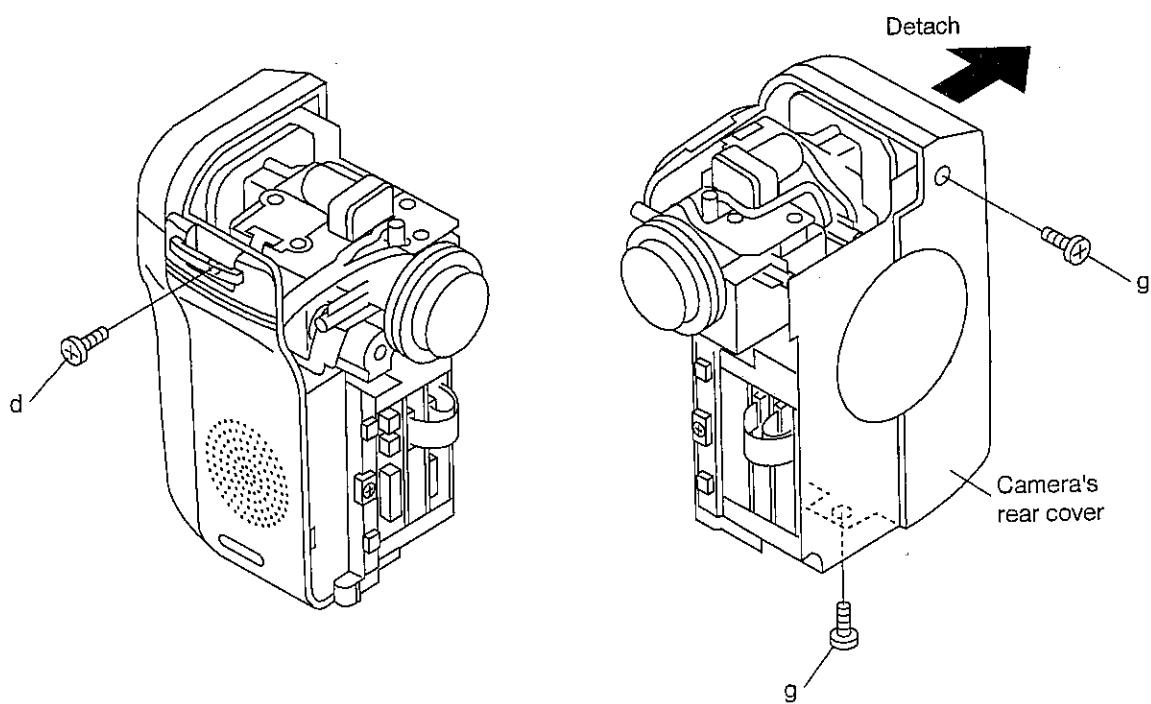

- 1) Remove the four screws and detach the camera's front cover.

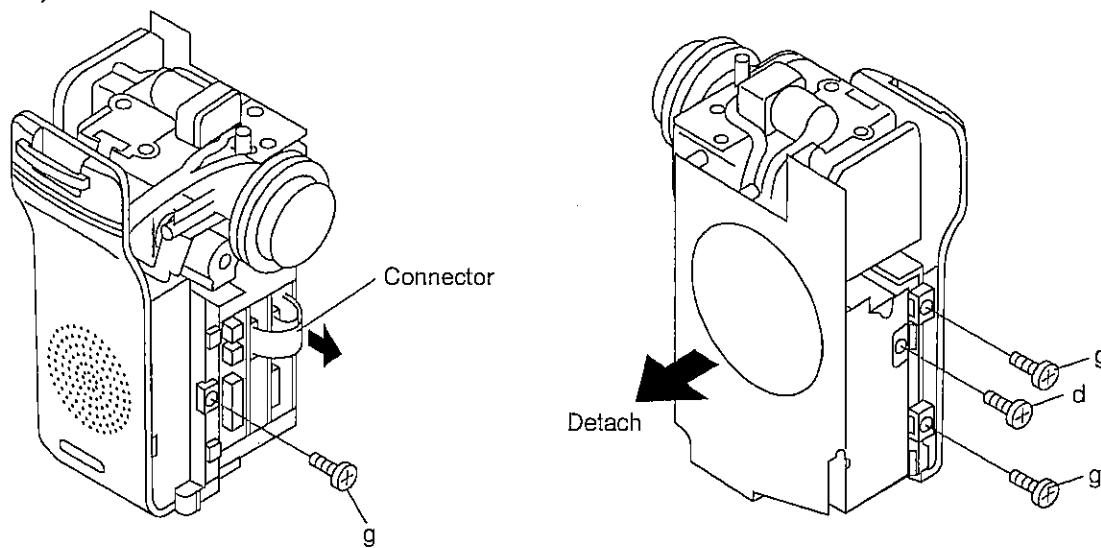

2) Disconnect the lower connector.

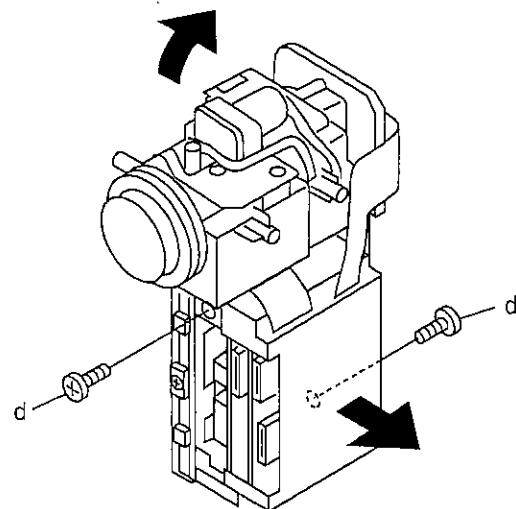

3) Remove the three screws and detach the camera's rear cover.

- 4) Disconnect the upper connector and the four screws.
Detach the side cover off the tilt frame C.

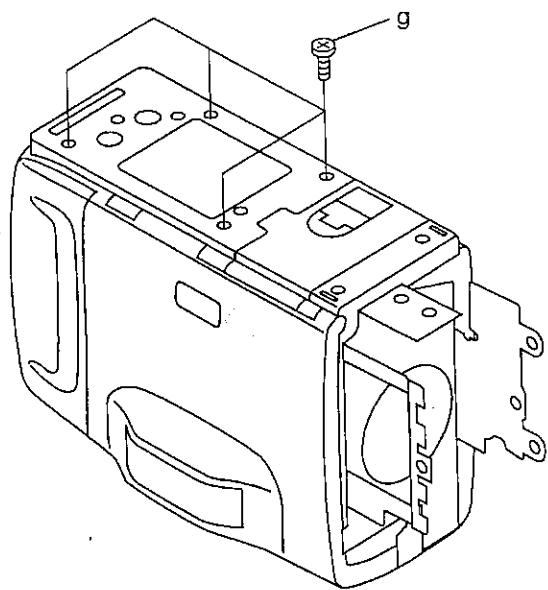

- 5) Remove the two screws, and take out the camera PWB unit and the lens unit together.

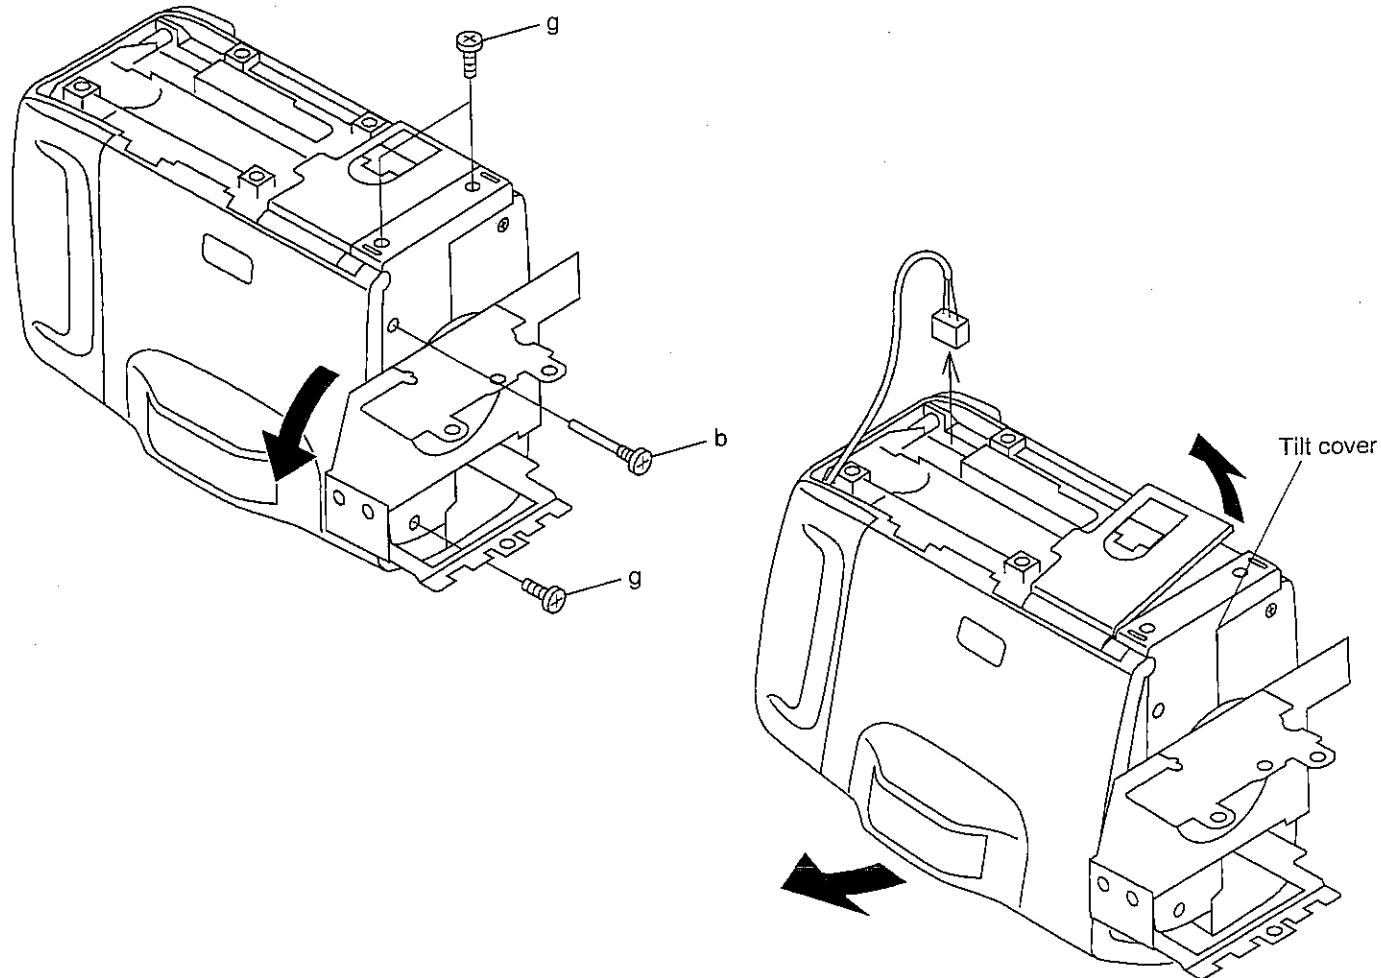

4-2. Disassembling the body**4-2-1. Removing the bottom cover**

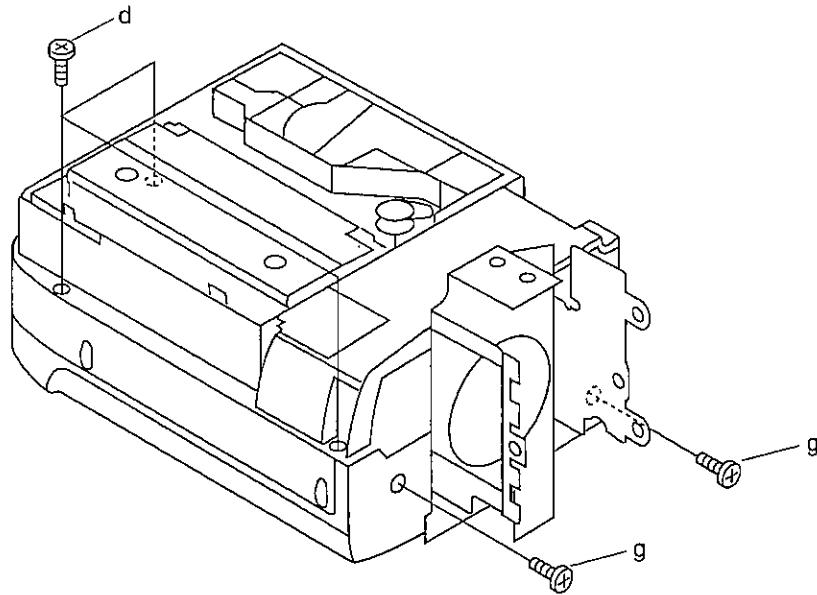

- 1) Remove the four screws and take the bottom cover assembly out of the body.

**4-2-2. Removing the cabinet L**

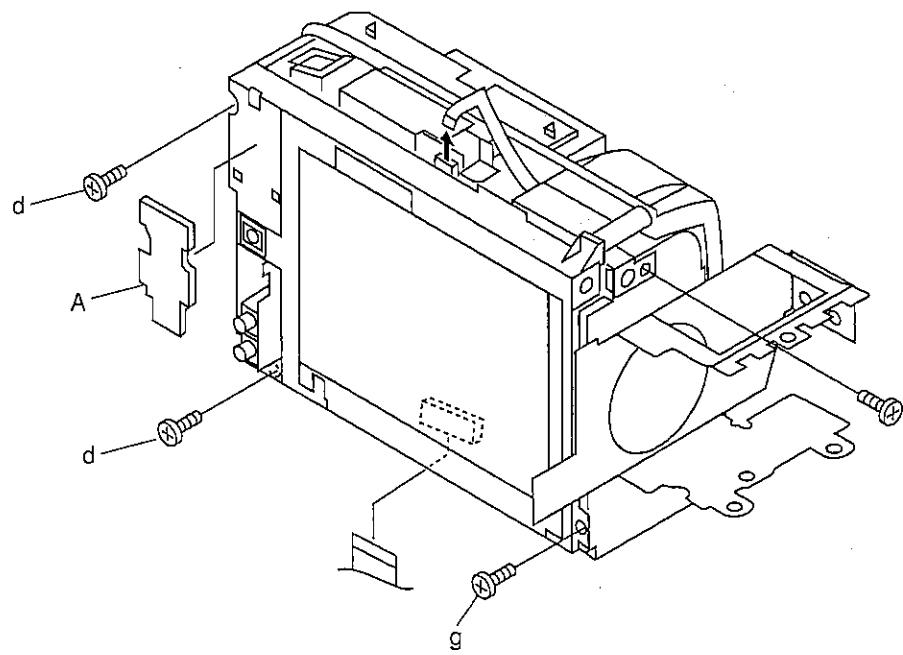

- 1) Remove the four screws, disconnect the connector, and open the VCR cover and the battery cover. Now detach the tilt cover.

2) Remove the five screws and detach the cabinet L.

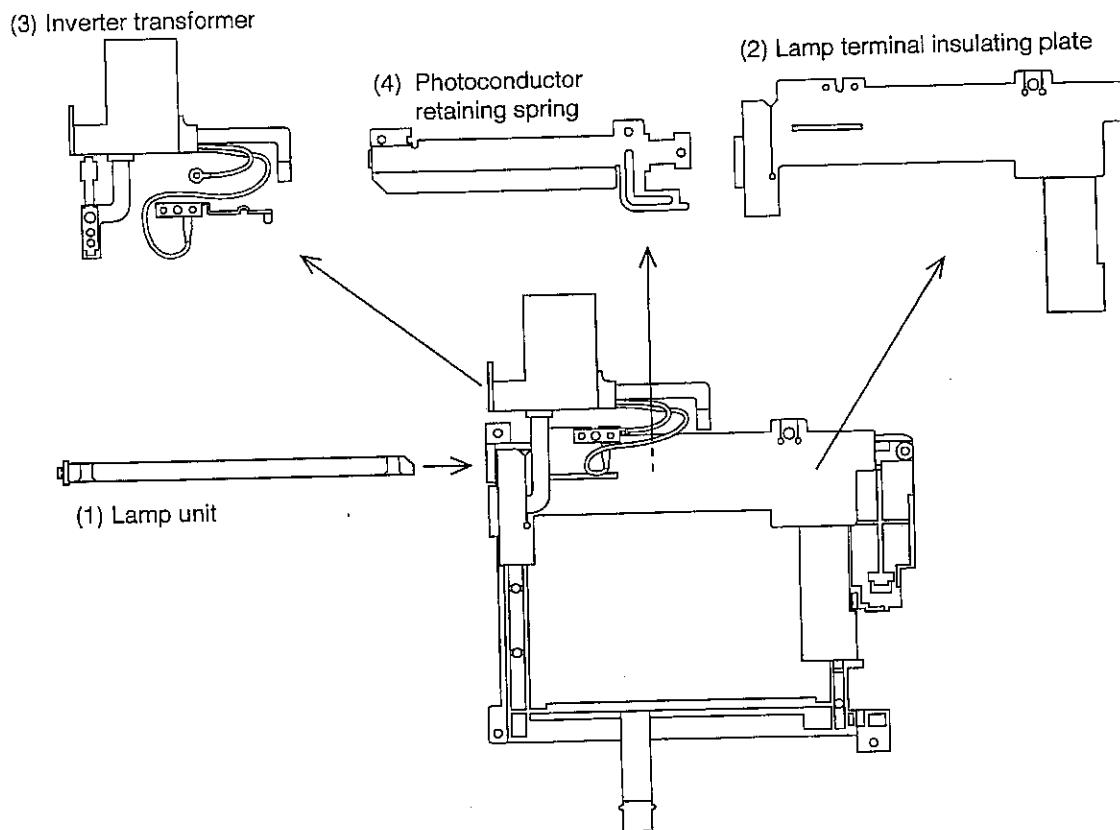

3) Detach the part A, remove the three screws, and disconnect the flexible cable connector. The LCD unit can now be taken out.

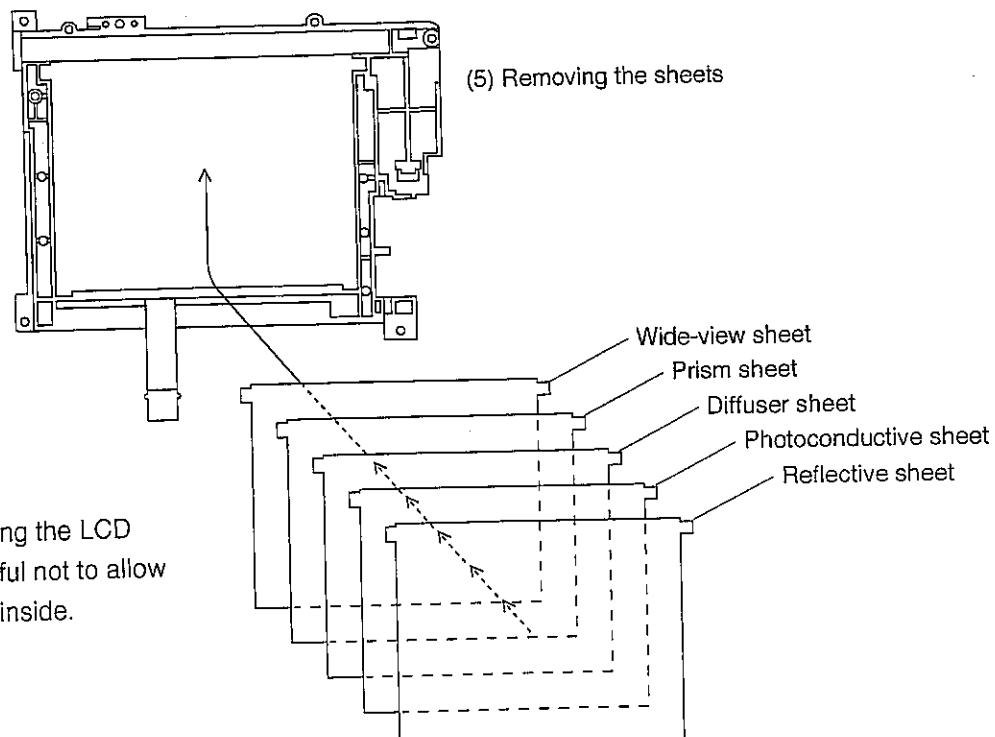

Removing the LCD unit

1. Draw the lamp unit out of the holder.
2. Remove the two screws (LX-HZ0031TAFF) and detach the lamp terminal insulating plate.
3. Remove the screw (LX-HZ0031TAFF) and detach the inverter transformer.
4. Remove the screw (LX-HZ0031TAFF) and detach the photoconductor retaining spring.
5. Finally detach all the sheets and photoconductor off the holder.

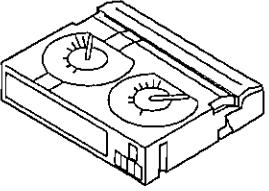

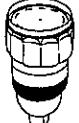

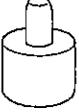

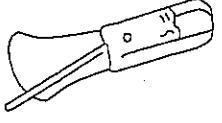

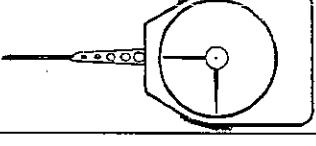

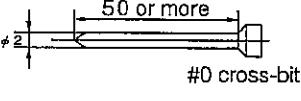

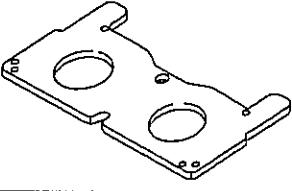

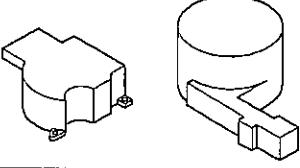

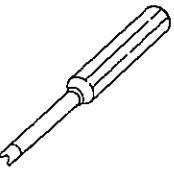

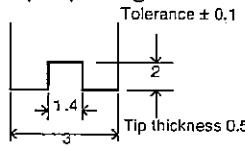

Rear view

Caution: When reassembling the LCD unit, be very careful not to allow any dust and dirt inside.

5. MECHANISM ADJUSTMENT JIGS AND PARTS

5-1. Mechanism check adjustment jigs

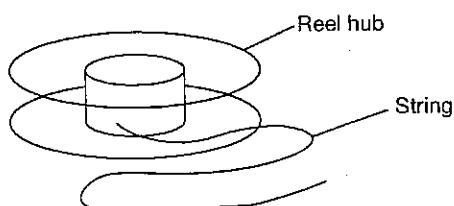

No.	Name	Part code	Shape	Model number and use
1.	PB-use cassette Torque meter	9DASD-1015		• SD-1015
2.	Torque gauge	JiGTG0045		• For use in VS-REW take up torque measurement
3.	Torque gauge head	9EQTGH-DH5000		• For use with the above torque gauge
4.	Tension gauge 4N (400gf)	JIGSG0400		• For measurement of pinch roller pressure.
5.	Dial tension gauge	9DAPTG-10-10W		• PTG-10
6.	Torque screwdriver 150mN·m (1.5kg·cm)	JiGTD1500RTDH		
7.	Master plane	9EQMP-DH5000		• For checking reel base height
8.	Height adjustment jig	9EQHG-DH5000		• For adjusting Tu guide height • For adjusting SI roller height
9.	Height adjustment screwdriver	9EQDRIVER-DH5		• For SI roller adjustment • For guide roller adjustment • For Tu guide adjustment • For reel base adjustment • Bit shape (see figure below) 

No.	Name	Part code	Shape	Model number and use
11.	Alignment tape	90ADVC-TAPE		• For tape running adjustment (color bar)
12.	Miscellaneous (1) Slide caliper (2) Precision screwdrivers (Phillips head and slotted) (3) Radio needle-nose pliers (4) Tweezers			

<How to make jigs for mechanism checking and adjustment>

(1) Reel hub for back tension measurement

- 1) Obtain a commercially available cassette tape reel hub. (Disassemble the cassette tape and remove the tape from the reel hub.)
- 2) Paste one end of a string (about 20cm long) to the reel hub with (for example) cellophane tape.

(2) String for use in pinch roller snap-fit force measurement.

- 1) Obtain an approximately 20cm length of commercially available string (diameter about 0.3mm).
- 2) Tie the 2 ends together to form a loop.

5-2. Parts for regular periodic inspection and maintenance

No.	Name	Part code	Shape	Model number and use
1.	Oil (1) Cosmo Hydro HV22	9EQ-OiL-HV22		* Cosmo Petroleum K.K.
2.	Cleaning paper	JiGDUSPER		• DUSPER (SIGMA) (ozu Co., LTD.)
3.	Extremely thin cotton swab			• Commercially available item
4.	Grease: Moly Coat YM-103	99FGREASE-YM103		• Dow Corning
5.	Screw lock (1401B)			• Three Bond
6.	Cleaning liquid: industrial-use ethyl alcohol			• Commercially available item

6. INSPECTION AND MAINTENANCE ITEMS AND INTERVALS

In order to keep the mechanical section always in good condition, perform the following inspection and maintenance at regular intervals. In addition, after repair, perform the following maintenance items regardless of how long the user has been using the unit.

6-1. List of inspection and maintenance items

	Inspection and maintenance location	Time of use (h)					Symptoms that indicate need for maintenance	Remarks
		500	1,000	1,500	2,000	3,000		
Tape running system	Tape running section (see section 8-1)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<ul style="list-style-type: none"> Block-type noise Head hole clogging Tape damage <p>Note: Replace the drum ass'y if the video is cleaned head but its hole is still clogged.</p>	<Rollers> <ul style="list-style-type: none"> Replace if there is anything abnormal in the rotation, or if there is run-out (that becomes large). <Other than the above> <ul style="list-style-type: none"> Clean the section that contacts the tape (especially the lower drum helical section). Use the specified cleaning liquid.
	Drum section, Video head (see section 8-1)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		
Drive system	Timing belt	—	★	—	★	★	<ul style="list-style-type: none"> The tape fails to run. The tape becomes slack. Block-type noise Abnormal noise 	<ul style="list-style-type: none"> Replace if there is anything abnormal.
	Pinch roller	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/> ○	<input type="checkbox"/>

[Oil] Cosmo Hydro HV22

[Grease] Moly Coat YM-103

[Screw lock] Three Bond 1401B

[Cleaning liquid] Industrial-use ethyl alcohol

○ ••• Replace. □ ••• Clean. △ ••• Lubricate. ★ ••• Check.

6-2. Precautions

- (1) When replacing any part, always replace the cut washer that was removed with a new one.
- (2) This mechanism does not have control adjustment. If the control cannot be set as required, clean and/or replace parts.
- (3) On the oil
 - a) Always use the specified oil. (Using another kind of oil can cause various kinds of trouble.)
 - b) Always use clean oil, without any mixed-in dirt, to lubricate bearings. (Using oil with dirt mixed in can cause the bearings to wear or to stick.)
 - c) One drop of oil is the amount shown in the figure below, on the point of a pin.
- (4) Perform circuit repair, tape running adjustment, etc. with the mechanism attached to the VCR frame.
- (5) To operate the mechanical section alone, apply voltage to the loading motor to drive it. The voltage between terminals must be DC3V or less. (Forcing the gears to turn by hand entails danger of breakage.)
- (6) To install the cassette control, push section A in the figure below. Do not push anything else.
- (7) Do not deform any of the mechanical parts.

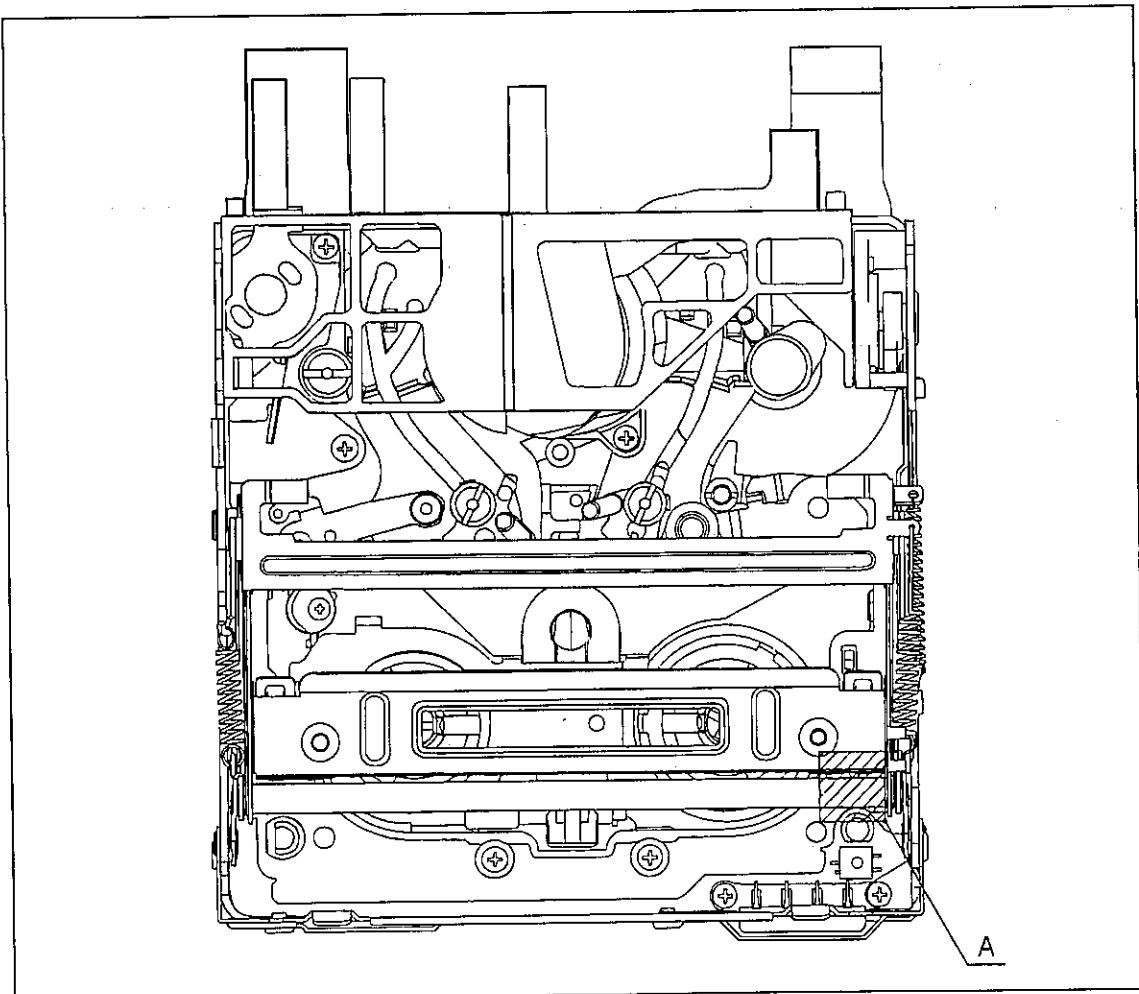

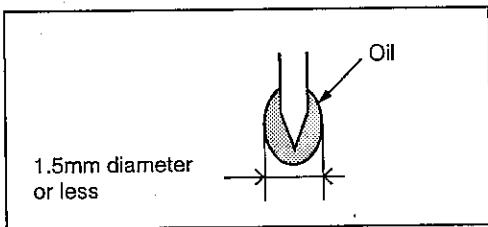

Fig. 1.

7. MECHANICAL ADJUSTMENTS AND CHECKS

The items discussed here relate to general on-site servicing (field servicing). Adjustments and replacements that require sophisticated facilities, jigs and technology are omitted.

In addition, in order to maintain the characteristics that the unit has when it is new, not only are inspection and maintenance necessary, but it is absolutely necessary that, for example, the tape not be damaged, and always use jigs for adjustments that require them.

<Precautions>

- (1) Always set the power supply and state of the unit as follows for mechanism adjustments and checks.

AC adapter used, with cassette control assembly

- 7-1 Check of takeup torque during playback (recording)
- 7-2 Check and adjustment of back tension torque during playback (recording)

AC adapter used, without cassette control assembly (Independent Mechanism)

- 7-3 Check of reverse search (VS-REW) takeup torque

DC3V, without cassette control assembly (Independent Mechanism)

- 7-4 Check of reel base height
- 7-5 Check of tension post position
- 7-6 Check of FF back tension
- 7-7 Check of REW back tension
- 7-8 Check of loading back tension
- 7-9 Check of pinch snap-fit force

(2) When performing checks with a DC3V power supply and independent mechanism, disconnect the loading motor FPC from the connector.

(3) Always run the tape with the cassette control assembly attached.

7-1. Check of takeup torque during playback (recording)

(1) Set the torque cassette with the cassette control assembly attached, then, in recording mode (playback mode if a signal has already been recorded on the tape), confirm that the torque on the takeup side is within the standard.

Takeup Torque Standard During Recording (Playback)

$0.65 \pm 0.35\text{mN}\cdot\text{m}$ ($6.5 \pm 3.5\text{gf}\cdot\text{cm}$),
ripple $0.2\text{mN}\cdot\text{m}$ ($2\text{gf}\cdot\text{cm}$) or less

(If there is torque ripple, read the center value.)

7-2. Check and adjustment of back tension torque during playback (recording)

(1) Checks

With the cassette control assembly attached, set the torque cassette in place; then, in recording mode (in playback mode if a signal has already been recorded on the tape), confirm that the supply side torque is within the standard.

Torque standard $0.54 \pm 0.12\text{mN}\cdot\text{m}$ ($5.4 \pm 1.2\text{gf}\cdot\text{cm}$)
(If there is torque ripple, read its center value.)

(2) Adjustment

If the torque is not within the standard, adjust the position at which the tension spring is attached in Fig. 5.

When the back tension torque is too high, move the spring attachment position in the A direction.

When the back tension torque is too low, move the spring attachment position in the B direction.

<Caution>

After adjusting the back tension torque, always check the tension post position.

7-3. Check of reverse search (VS-REW) takeup torque

(1) Remove the cassette control assembly; then, referring to 9-3 (3) thru (5), insert thick paper between the DOWN switch and the Tu lock release lever; then run the unit in test mode and set the system into reverse search (VS-REW) modes.

(2) Set a torque gauge on the S reel base, then move the tension post tip in the direction of arrow A with a finger. With the tension post released, confirm that the takeup torque is within the standard. (Measure without rotating the torque gauge.)

Reverse search (VS-REW) takeup torque standard

$2.0 \pm 0.6 \text{mN}\cdot\text{m}$ ($20 \pm 6 \text{gf}\cdot\text{cm}$),
ripple $0.4 \text{mN}\cdot\text{m}$ ($4 \text{gf}\cdot\text{cm}$) or less

(If there is torque ripple, read its center value.)

(3) After checking the takeup torque, remove the torque gauge, then remove the thick paper (refer to 8-3) that was inserted in (1). The system will automatically go into standby mode. (Absolutely do not press the EJECT lever on the VCR frame. There is danger that doing so will deform the lever and cams.)

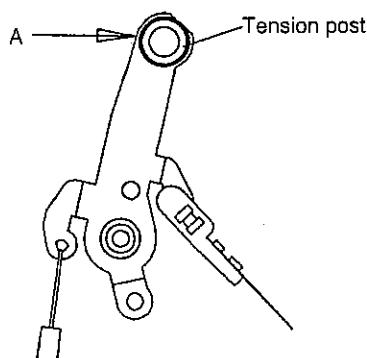

Fig. 2. How to release the tension band when measuring the reverse search (VS-REW) takeup torque.

7-4. Check of reel base height

(1) Remove the cassette control assembly (refer to 9-2).

(2) Referring to 9-1, apply DC3V to the loading motor and put the system into FF (REW) mode.

(3) Taking adequate care so that the master plane does not contact drum, running parts (guide roller, etc.), or the MIC contacts. Fit the master plane holes to the 2 guides (A and B) in Fig. 3.

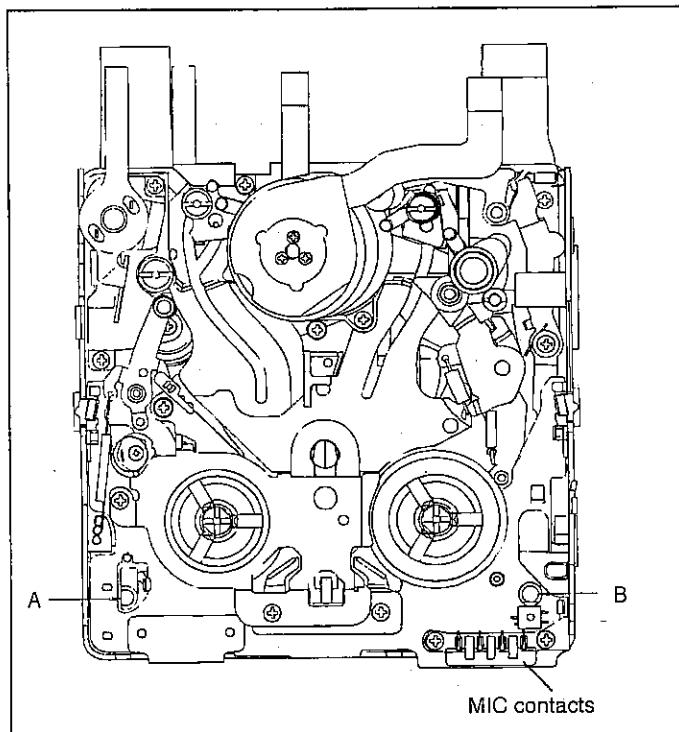

Fig. 3.

(4) Confirm that the heights of the S reel base reel receiving surface and the Tu reel base reel receiving surface below the master plane top surface are within the set values, using, for example, a slide calliper (Fig. 4).

(5) If these heights are not within the set values, turn the reel cap with a height adjustment screwdriver to adjust until they are within the set values.

Note: After the adjustment, make sure that the reel bases rotate smoothly. (To check the Tu reel base, release the down switch and take-up lock release-lever, referring to 9-3-(3) thru (5).)

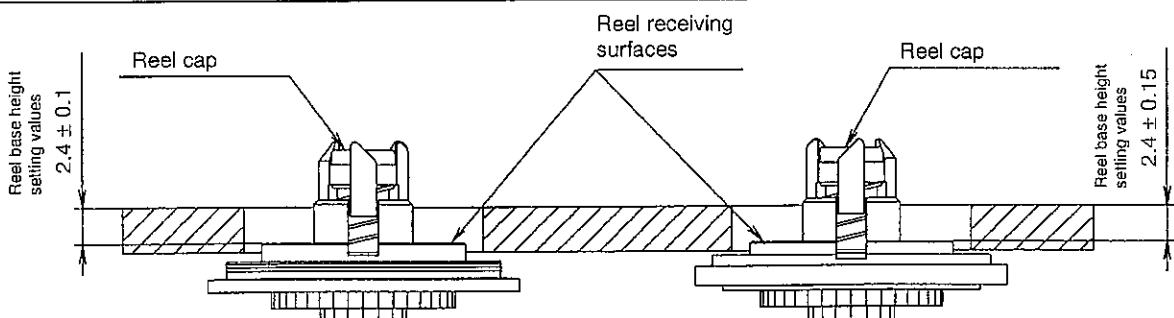

Fig. 4.

7-5. Check of tension post position

(1) Remove the cassette control assembly, then apply DC3V to the loading motor and put the system into PB mode (without tape).

Confirm that the tension post is $8.5^0_{-0.5}$ mm from the inner wall of the main chassis, as shown in Fig. 5.

(2) If it is not at the prescribed position, adjust by turning the eccentric pin.

When the tension post is too far toward the outside, turn the eccentric pin clockwise.

When the tension post is too far toward the mechanism center, turn the eccentric pin counterclockwise.

Distance from the main chassis inner wall to the outer circumference of the tension post upper flange

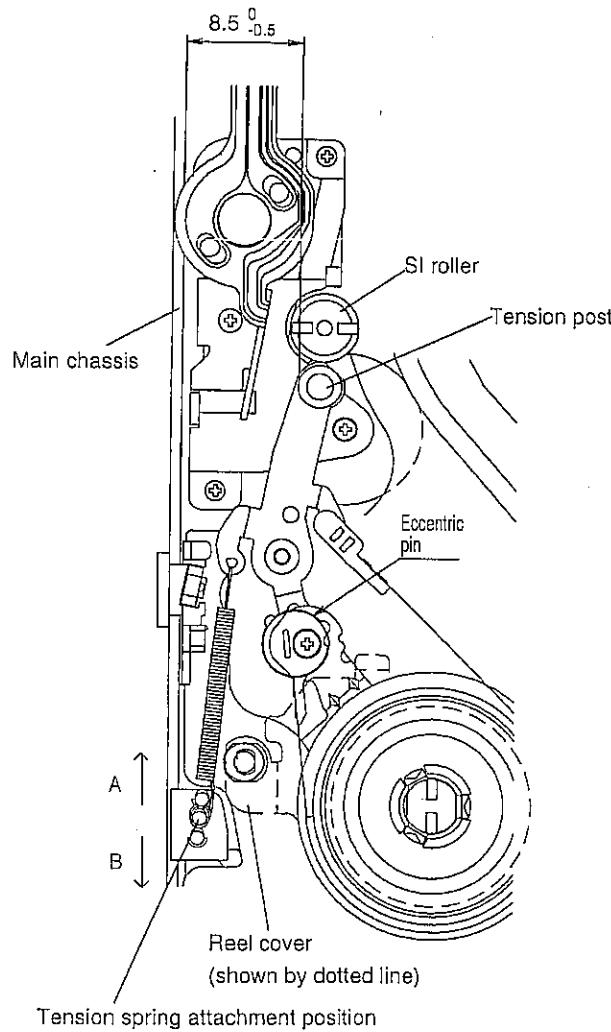

Fig. 5.

7-6. Check of FF back tension

(1) Remove the cassette control assembly, then apply DC3V to the loading motor and put the system into FF mode (refer to 9-1).

(2) Turn the mechanism over, then move the swing arm to the Tu reel base side, for example by using the tip of a screwdriver (refer to Fig. 7).

(3) Set a back tension measurement reel hub on the S reel base.

(4) Using a dial tension gauge, pull the string in the A direction, then confirm that the tension is within the standard.

FF back tension standard

$17 \pm 12\text{mN}$ ($1.7 \pm 1.2\text{gf}$)

(If the tension fluctuates, read its center value.)

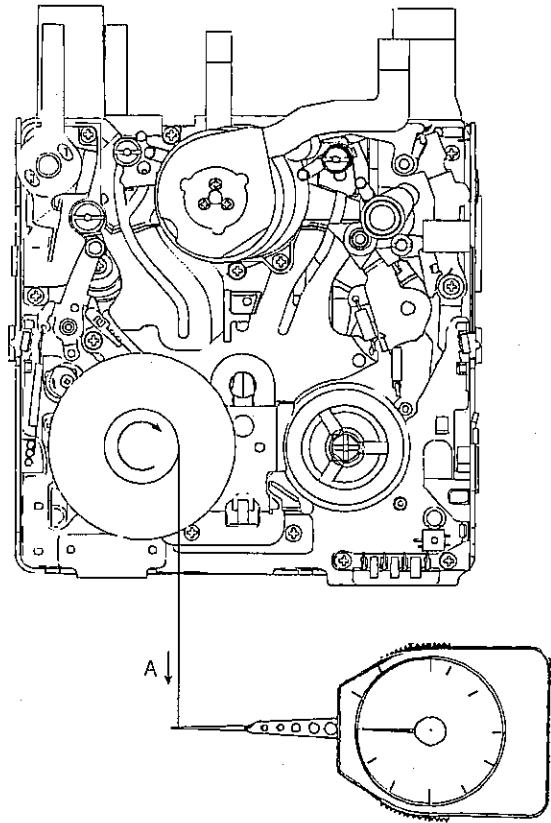

Fig. 6. How to measure the FF back tension.

7-7. Check of REW back tension

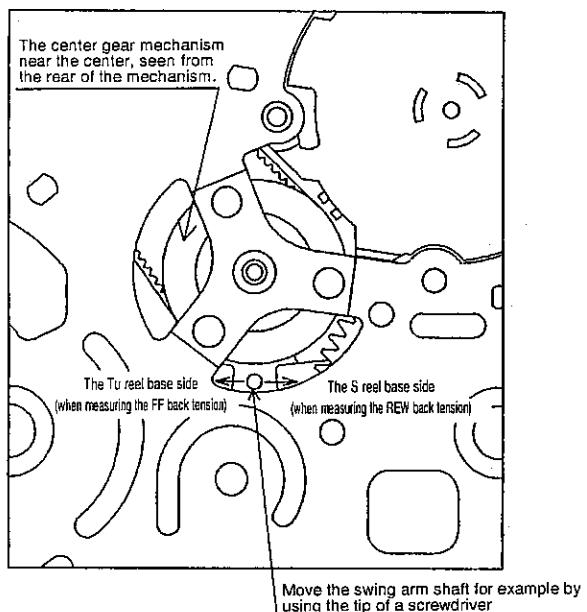

Fig. 7. The swing arm shaft position (seen from the rear of the mechanism) when measuring the FF • REW back tension.

- (1) Remove the cassette control assembly, then apply DC3V to the loading motor and put the system into REW mode (refer to 9-1).
- (2) Referring to 9-3 (3) thru (5), insert thick paper, then release the DOWN switch and the Tu lock release lever.
- (3) Turn the mechanism over, then move the swing arm toward the S reel base side, using for example the tip of a screwdriver (see Fig. 7).
- (4) Set a back tension measurement reel hub on the Tu reel base.
- (5) Using a dial tension gauge, pull the string in the A direction, then confirm that the tension is within the standard.
- (6) Remove the paper that was inserted in (2).

REW back tension standard

$17 \pm 12\text{mN}$ ($1.7 \pm 1.2\text{gf}$)

(If the tension fluctuates, read its center value.)

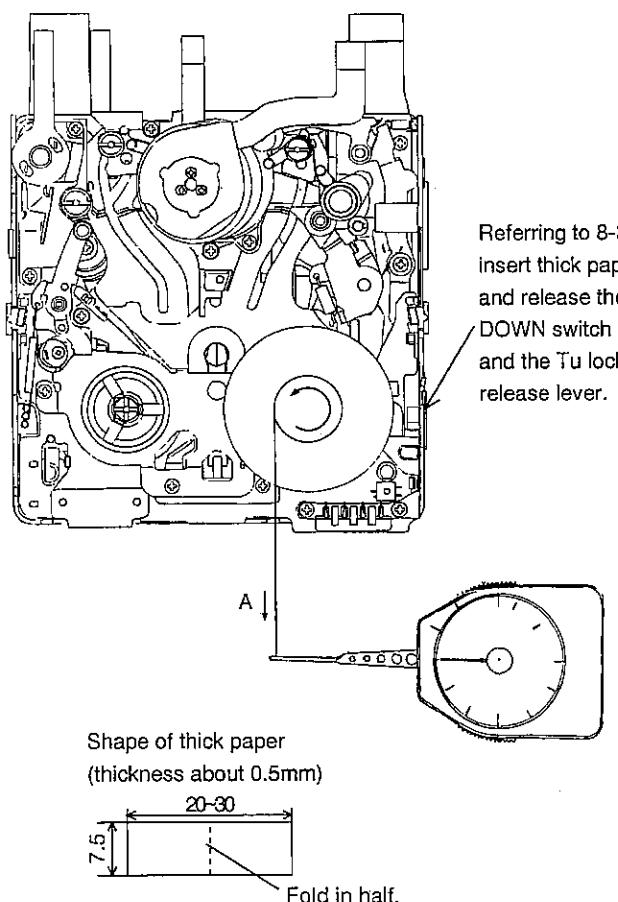

Fig. 8. How to measure the REW and loading back tension.

7-8. Check of loading back tension

- (1) Remove the cassette control assembly, then apply DC3V to the loading motor and put the system into standby mode (refer to 9-1).
- (2) Referring to 9-3 (3) thru (5), insert thick paper, and release the DOWN switch and the Tu lock release lever.
- (3) Turn the mechanism over, then move the swing arm to the S reel base side, for example with the tip of a screwdriver (see Fig. 7).
- (4) Set a back tension measurement reel hub on the Tu reel base.
- (5) With the dial tension gauge, pull the string in the A direction and confirm that the tension is within the standard. (If the tension fluctuates, read the center value.)
- (6) Remove the paper that was inserted in (2).

Loading back tension standard value

$40 \pm 30\text{mN}$ ($4 \pm 3\text{gf}$)

7-9. Check of pinch snap fit force

- (1) Remove the cassette control Assembly.
- (2) Attach a pinch roller snap fit force measurement string to the pinch roller.
- (3) Apply DC3V to the loading motor and put the system into playback mode, then snap-fit the pinch roller onto the capstan shaft.
- (4) Hook a tension gauge onto the pinch roller snap fit force measurement string, then, as shown in Fig. 9, pull the string in the direction of the light guide to gradually remove the pinch roller from the capstan.
- (5) When the pinch roller has come off of the capstan shaft, read the tension gauge value.

<Standard>

$2.2 \pm 0.6\text{N}$ ($220 \pm 60\text{gf}$)

<Caution>

After making this measurement, quickly release the system from playback mode and remove the pinch roller from the capstan shaft. (If the pinch roller is left fitted onto the capstan shaft for a long time, the pinch roller will be deformed.)

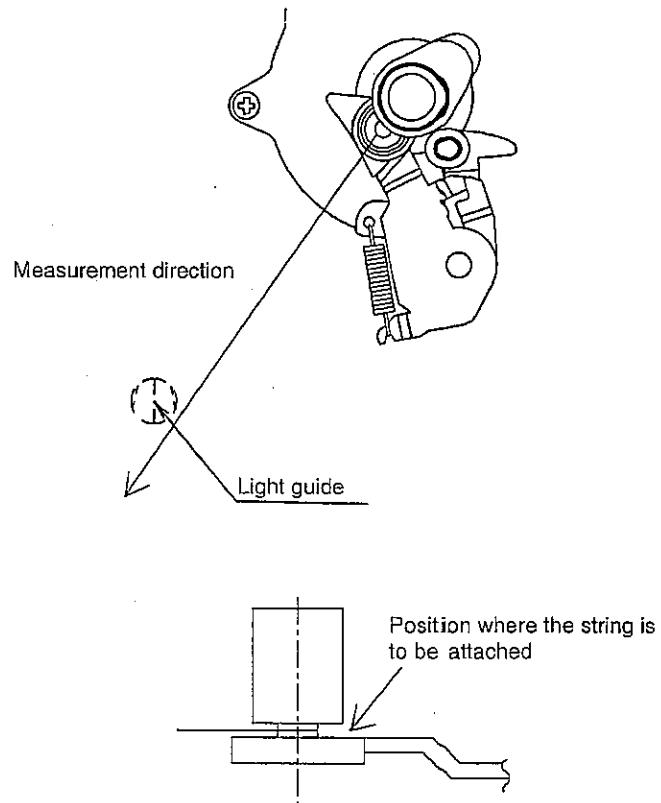

Fig. 9.

8. TAPE RUNNING ADJUSTMENT

Always make the tape running adjustment with the VCR frame and the cassette control ass'y attached to the mechanical section.

8-1. Adjustment locations

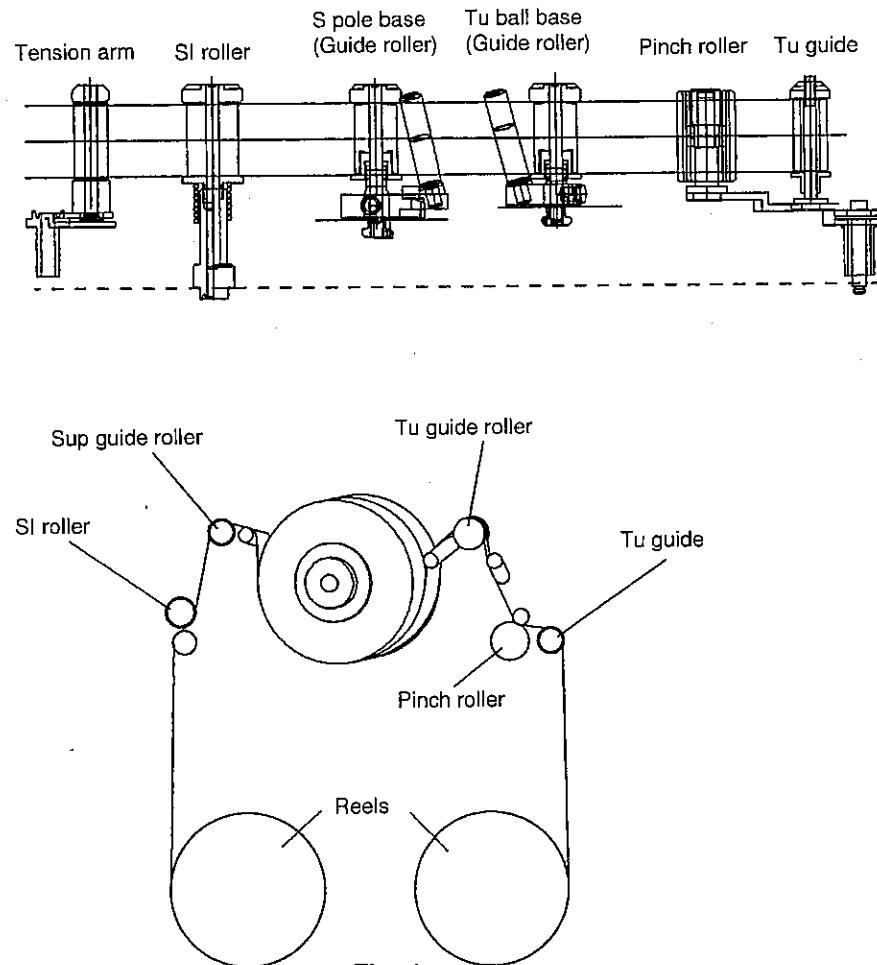

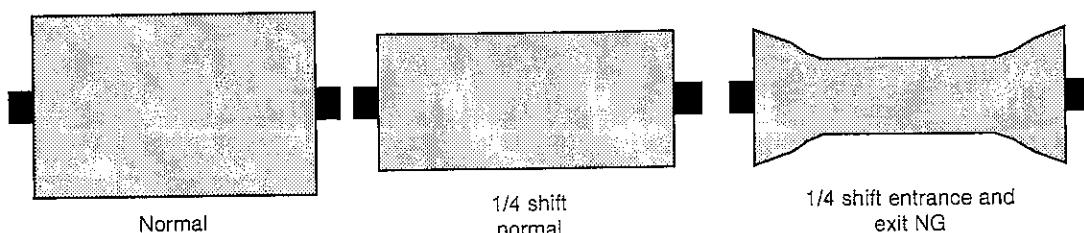

Fig. 1.

8-2. Preparation for adjustment

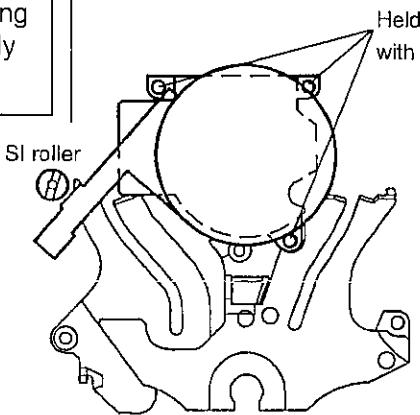

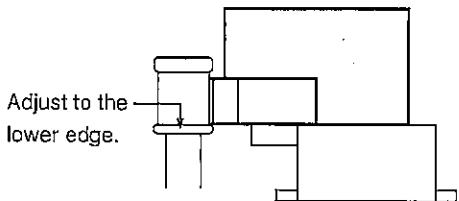

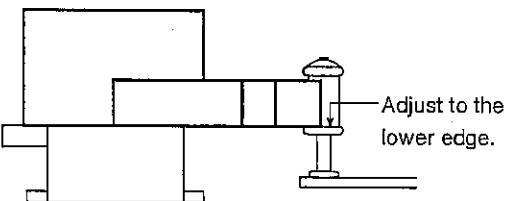

- (1) Clean the tape running surface (Fig. 1) (especially, adequately clean the drum surface and the lower drum helicam surface).
- (2) Connect an oscilloscope to each TP on the relay circuit board.
- (3) Turn the AC adapter power ON.
- (4) Using the adjustment remote control unit, put the system into TEST mode T-05.
- (5) Replay a alignment tape for running adjustment.
- (6) Check the oscilloscope playback envelope, then, at +1/4 shift and -1/4 shift, check whether all of it is flat. If it is not, perform the following adjustment so that it becomes flat.

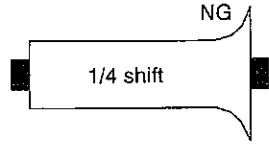

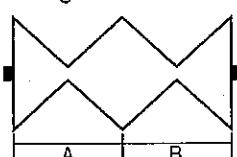

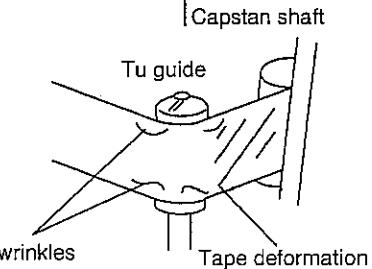

8-3. Steps to perform

- (1)Check and adjust the SI roller and the Tu guide height.
- (2)Adjust the Sup/Tu guide roller height.
- (3)Check the reverse search (VS-REW) envelope waveform.
- (4)Check the tape wrinkles.
- (5)Check the envelope rise.
- (6)Check the playback SWP.

<Checks and Adjustments>

Checks and adjustments	Method	Setting values and precautions	Measuring instruments and jigs					
1) Si roller/Tu guide height Note) Perform adjustment 1) only when replacing that part itself; when replacing other parts, perform only the fine adjustment 4).	<p>(1)Using a height adjustment jig, check whether the heights of each part match the preset positions. If they do not match, adjust so that they match the jig.</p>  <p>Held in place with 3 screws</p>	Setting values	<ul style="list-style-type: none"> • Oscilloscope • Height adjustment jig • Height adjustment Screw-driver 					
When performing the Tu guide adjustment, apply a voltage of 3V to the loading motor, then pull the Tu guide out to the position in Fig. 3.	<p>Fig. 2.</p>  <p>Adjust to the lower edge.</p> <p>Fig. 3.</p>  <p>Adjust to the lower edge.</p>							
2) Sup guide roller height	<p>(1)Loosen the guide roller lock screw, then tighten loosely so that the roller turns easily.</p> <p>(2)Replay a alignment tape, and adjust the Sup guide roller so that the envelope entrance side is flat.</p> <p>(3)Perform a 1/4 shift, then, as in the above case, adjust until the envelope becomes flat.</p> <p>(4)Tighten up the Sup guide roller lock screw.</p>	<p>Setting values</p> <table border="1"> <tr> <td>Entrance side</td> <td>Exit side</td> </tr> <tr> <td>Normal</td> <td></td> </tr> </table> <p>NG</p> <table border="1"> <tr> <td>1/4 shift</td> </tr> </table>	Entrance side	Exit side	Normal		1/4 shift	<ul style="list-style-type: none"> • Oscilloscope • Adjustment remote control • Height adjustment screw-driver • Alignment tape
Entrance side	Exit side							
Normal								
1/4 shift								

Checks and adjustments	Method	Setting values and precautions	Measuring instruments and jigs
Tu guide roller height	(1) As in the case of Sup, adjust the guide roller height so that the envelope becomes flat.	Setting values 	
3) Check of reverse search (VS-REW) envelope waveform	(1) Confirm that the envelope waveform peaks in reverse search (VS-REW) mode are uniform. (2) If they are not uniform, fine-adjust the guide roller and the Tu guide.	Setting values  Adjust so that A = B.	• Oscilloscope • Height adjustment screwdriver • Alignment tape
4) Check of tape wrinkles SI roller height fine adjustment	(1) In PB mode, confirm that there are no wrinkles in the SI roller tape running section. (2) If there are wrinkles, perform fine adjustment of the height.	Setting values	• Height adjustment screwdriver • Alignment tape • Screw lock
Tu guide height fine adjustment	(1) In PB mode, check whether tape is being deformed between the Tu guide and the pinch roller, and whether the tape is becoming wrinkled on the upper or lower flange. (2) In reverse search (VS-REW) mode, check for deformation and wrinkles, as above. (3) If the tape is becoming wrinkled, perform fine adjustment of the Tu guide height. (4) Apply screw lock to the Tu guide upper flange.		
5) Check the rising edge of the envelope.	(1) Check the rising edge of the envelope when switching from reverse search (VS-REW) mode to PB mode. (2) Check the rising edge of the envelope when switching from STOP mode to PB mode.	Setting value: Rising edge width within 1 second.	
6) Adjustment of playback SWP	(1) Replay an alignment tape. (2) Using the adjustment remote control unit, enter SWP automatic adjustment mode.		• Alignment tape

9. MECHANICAL SECTION ASSEMBLY AND PARTS REPLACEMENT (DISASSEMBLY AND REASSEMBLY)

Mechanical section disassembly and reassembly are explained in this section.

For removal of the cabinet, etc., refer to 4 DISASSEMBLING THE SET.

<Precautions>

1. Always replace cut washers that have been removed, for example in parts replacement, with new ones.
2. Turn the mechanical section over; do not place it on, for example, a desk. Deformation and scratching of mechanical parts can cause trouble.
3. When reassembling, be careful not to allow screws, washers or foreign matter to enter. They can cause mechanical misoperation.
4. Use the cleaning liquid, oil, grease and screw lock that are specified below. Use of any other kind can cause mechanical misoperation.

Oil: Cosmo Petroleum : Cosmo Hydro HV22

Grease: Dow Corning : Moly Coat YM-103

Screw lock: Three Bond :1401B

Cleaning liquid: Industrial-use ethyl alcohol

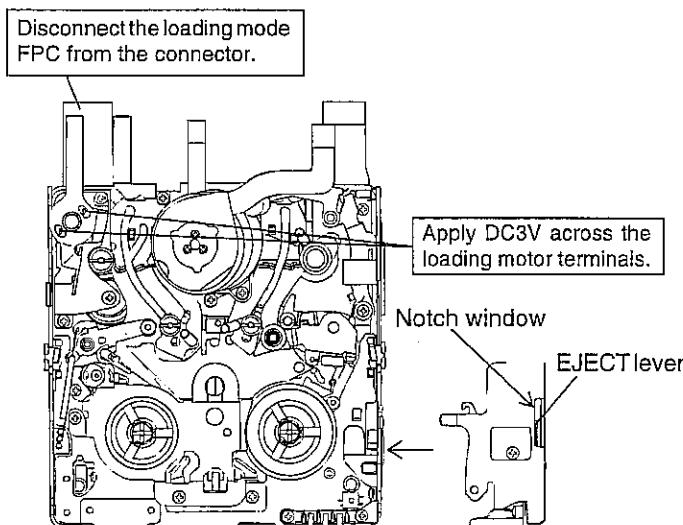

9-1. On the mechanical modes

To operate the mechanism, apply DC3V to the loading motor.

At this time, disconnect the loading motor FPC from the connector.

(1) EJECT mode

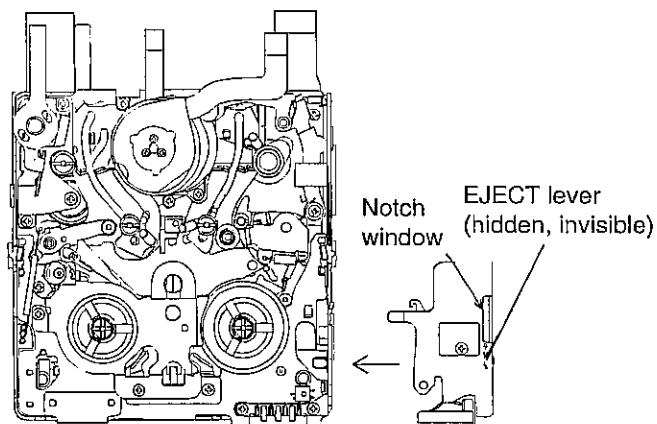

In the mechanical position in which a cassette is ejected, the EJECT lever, which is not visible through the notch window at the bottom of the chassis right side in standby mode, moves to a position where it is visible in this mode.

EJECT mode diagram

(2) STANDBY mode

In the mechanical position in which the cassette is loaded, the EJECT lever, which was in a position where it was visible through the notch window at the bottom of the chassis right side in EJECT mode, becomes invisible in this mode, so that it can be locked when the cassette control assembly is moved down.

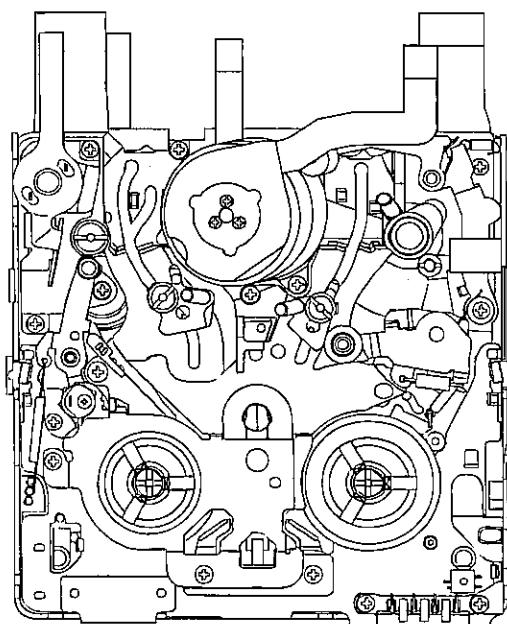

STANDBY mode diagram

(3) MIDDLE POINT mode

This is the mode where the tape is wound around the take-up reel when a cassette with visible wind start leader tape is loaded.

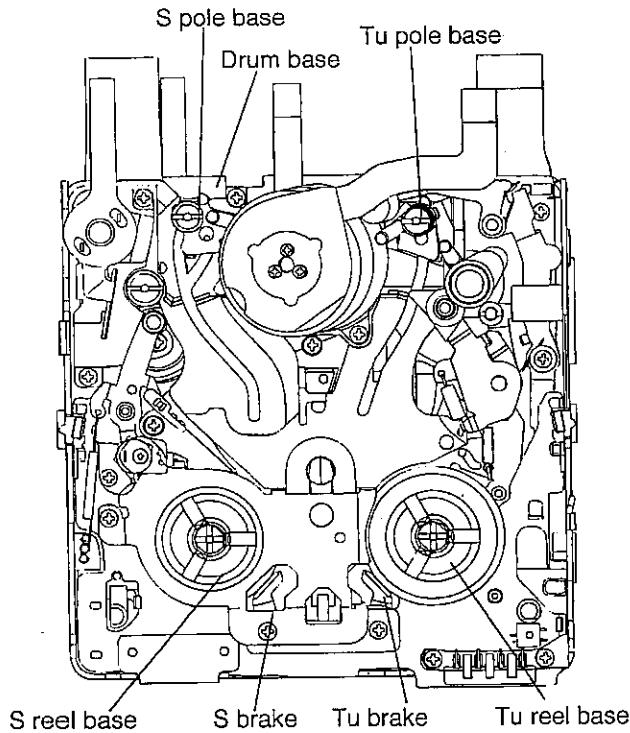

MIDDLE POINT mode diagram

VL-DC1U

(4) STOP mode

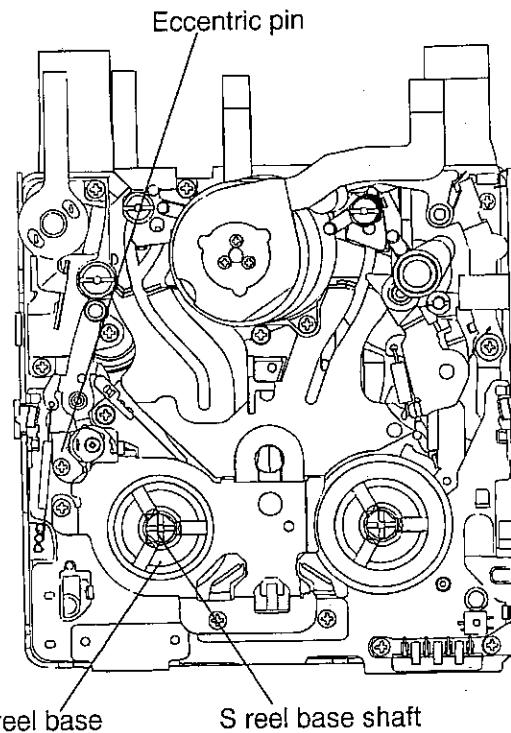

The system is in the STOP (Rec Lock in CAMERA mode) position; the S side and the Tu side pole bases are snap-fitted to the drum base, the S side brake is in contact with the S reel base, and the Tu side brake is in contact with the Tu reel base.

STOP mode diagram

(6) FF (REW) mode

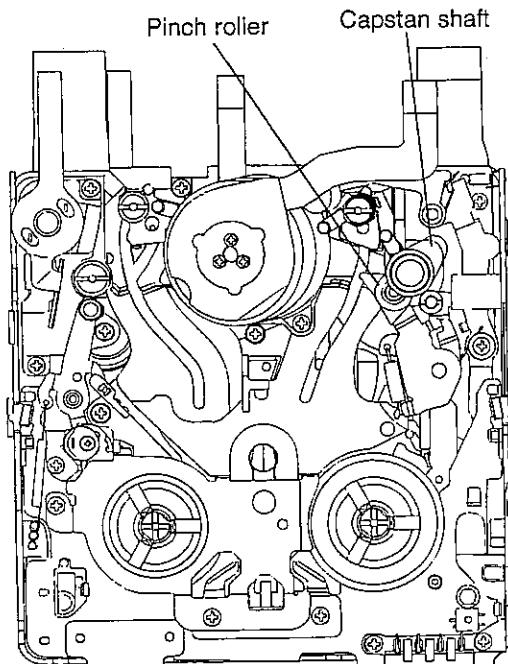

This is the mechanical position for tape fast forward and rewind; compared to STOP mode, the eccentric pin rotates counterclockwise, centered on the S reel base shaft.

FF (REW) mode diagram

(5) PB-(Rec) mode

This is the mechanical position for playback and recording; the pinch roller is snap-fitted onto the capstan shaft.

PB (REC) mode diagram

9-2. Cassette control assembly

Cassette control assembly (see Fig. 2)

<Removal>

- (1) Remove the cassette control cover.
- (2) Press the EJECT lever of the VCR frame to raise the cassette control. Or, in STANDBY mode, push the lock lever in the direction of the arrow to raise the cassette control. (See Fig. 1; direction (a) or direction (b).) (When pushing in direction (a), lift the cassette control lightly by hand to release it.)

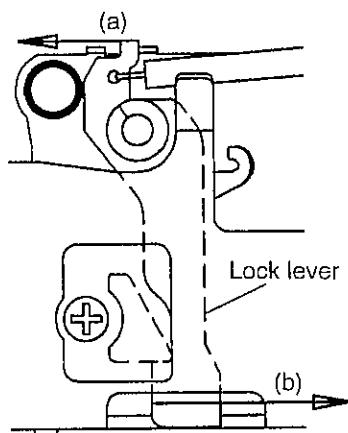

Fig. 1 Lock lever.

- (3) Remove the drum cover.
- (4) Remove the 4 screws (c), then remove the DOWN guide (d).
- (5) Remove the screw (e), then slide the damper (f) to remove it, then remove the auxiliary spring (g) from the main chassis.

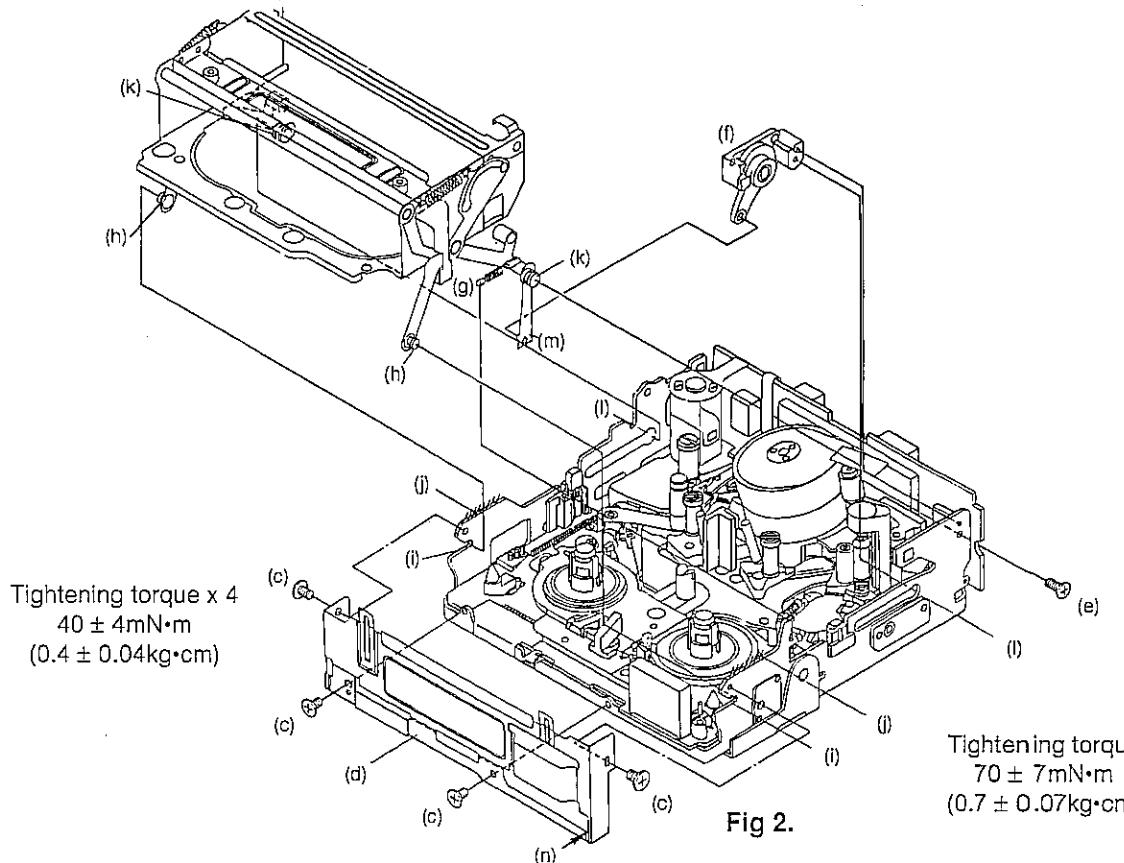

Fig. 2.

- (6) Remove the cassette control outer ring shafts (2 locations (h)) from the main chassis grooves (2 locations (i)), then place them on section (j) (shown by slanting lines).
- (7) While holding the cassette control in the down position, slide the inner arm shaft (k) to the rear of the main chassis groove (round hole (l)). (At this time be careful that the damper lever (m) does not catch on the AHC release spring.)
- (8) While bending the inner arm shaft (k) slightly toward the inside, release it from the main chassis groove. (At this time be careful not to deform the inner arm.)

<How to attach>

- (1) Put the system into STANDBY mode (refer to 9-1 (2)).
- (2) Insert the inner arm shaft (k) into the main chassis groove (l) (as when it was removed, be careful not to deform the inner arm).
- (3) Place the outer link shaft (h) on section (j) of the main chassis, then, while pressing slowly on the cassette control from above, slide the shaft (h) forward and hook it on section (i) of the main chassis.
- (4) Attach the auxiliary spring (g) and the damper (f). Tightening torque $70 \pm 7\text{mN}\cdot\text{m}$ ($0.7 \pm 0.07\text{kg}\cdot\text{cm}$)
- (5) Attach the DOWN guide. (When attaching it, press on section (n) while tightening the screw.) Tightening torque $40 \pm 4\text{mN}\cdot\text{m}$ ($0.4 \pm 0.04\text{kg}\cdot\text{cm}$)
- (6) Attach the drum cover and the cassette control cover.

9-3. How to operate with the circuit board with the cassette control assembly removed

In this method, if the procedure is followed incorrectly there is danger of damaging the mechanism and the tape, so except in special cases, such as when measuring the reverse search (VS-REW) torque, do not perform this procedure. Normally operate this unit with the cassette control assembly attached.

Be sure to follow each caution mentioned.

- (1) Put the system into EJECT mode.
- (2) Connect the mechanical section to the main circuit board with the FPC jig for relay use. (Refer to 10-1.)
- (3) Remove the lock cam (1).

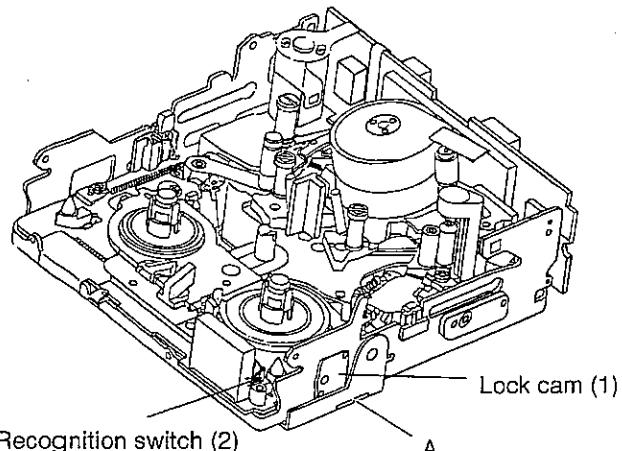

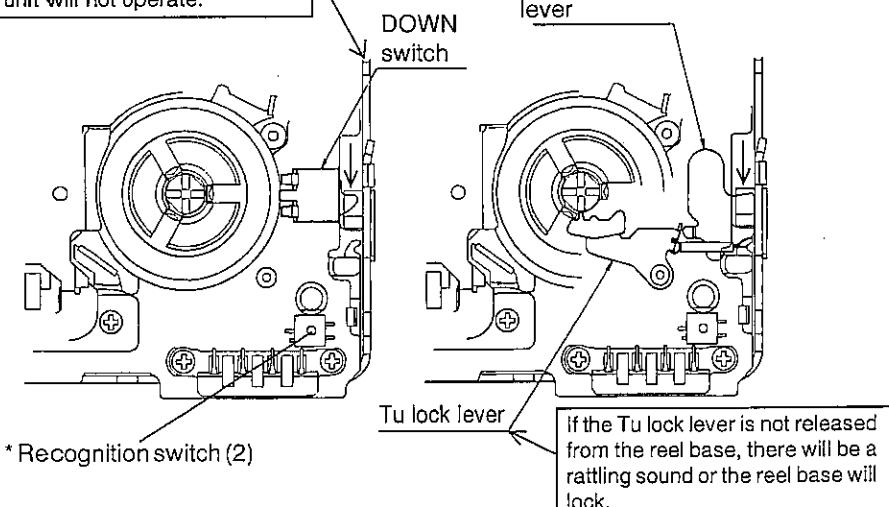

Fig. 3.

If the DOWN switch is not turned ON, a "no cassette" message will appear on the liquid crystal screen and the unit will not operate.

(4) From the front side of the mechanism, while pushing the DOWN switch and the Tu lock release lever in the direction of the arrow in Fig. 5, for example with a slotted screwdriver, insert the thick paper (about 0.5mm thick) shown in Fig. 4 from the rear side of the mechanism as shown in Fig. 5, then release the DOWN switch and the Tu lock release lever (do this in such a way that the switch will come ON). At this time, be careful not to deform the Tu lock release lever.

(5) After releasing the Tu lock release lever, confirm that the Tu reel base rotates smoothly in both directions.

Note) If the Tu lock release lever has not been released, There will be a rattling sound; If the tape is loaded in this condition, the reel base will lock, damaging the tape and the mechanism.

Note) When putting the system into REC mode, push the pin (shown by the * mark) of the recognition switch (2) (this is not necessary in other modes).

(6) If the system is put into TEST mode (indicator T-01 lights up) with the adjustment remote control without inserting a tape, it becomes possible to operate the mechanism with the MODE key.

(7) When ejecting, remove the thick paper inserted in step (4).

Note) Absolutely do not press the EJECT lever of the VCR frame. Doing so can damage the lever and the cams. There will be a rattling sound during the ejection, but this is not abnormal.

(Make from paper about 0.5mm thick.)

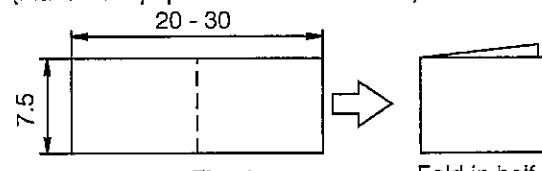

Fig. 4.

DOWN switch
Tu lock release lever

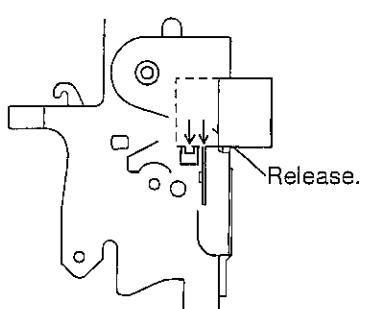

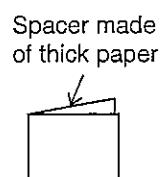

Fig. 5.

9-4. Phase matching

For the parts listed below, match the phases as shown in Fig. 6.

- (1) MODE switch
- (2) Main cam
- (3) Cam coupling gear
- (4) Pinch cam

Note) Before disassembling, check the marker positions carefully.

Note) After phase matching, turn the MODE switch by hand and confirm that it turns almost one complete turn.
(After checking, return it to its original position.)

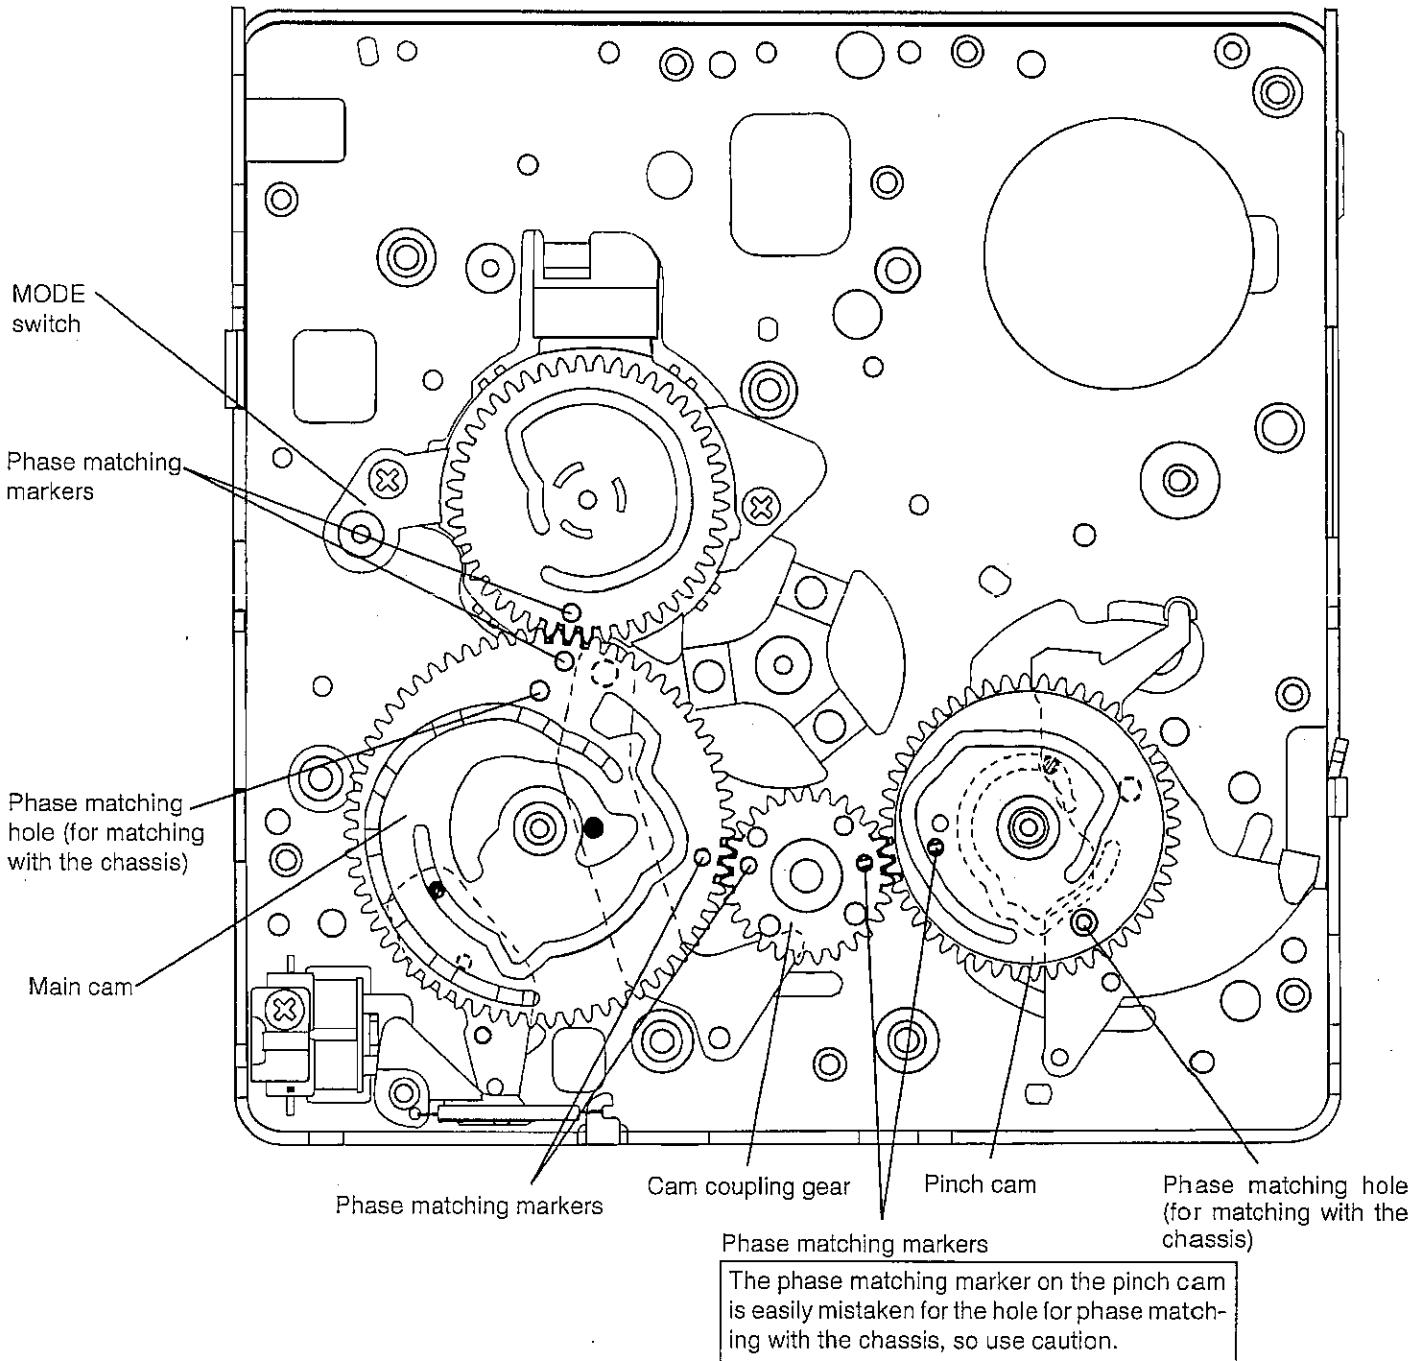

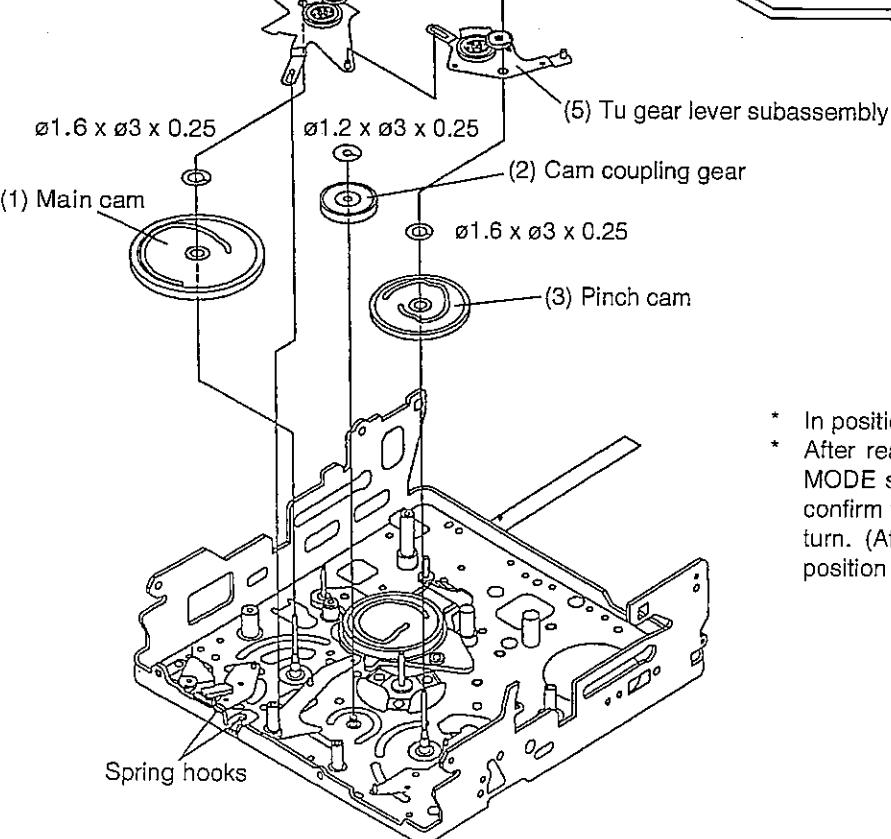

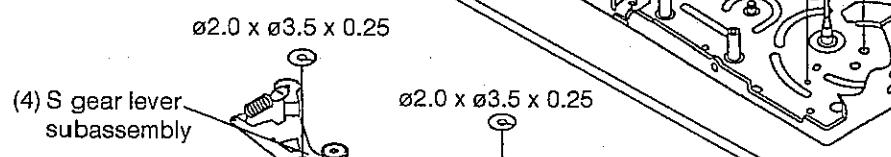

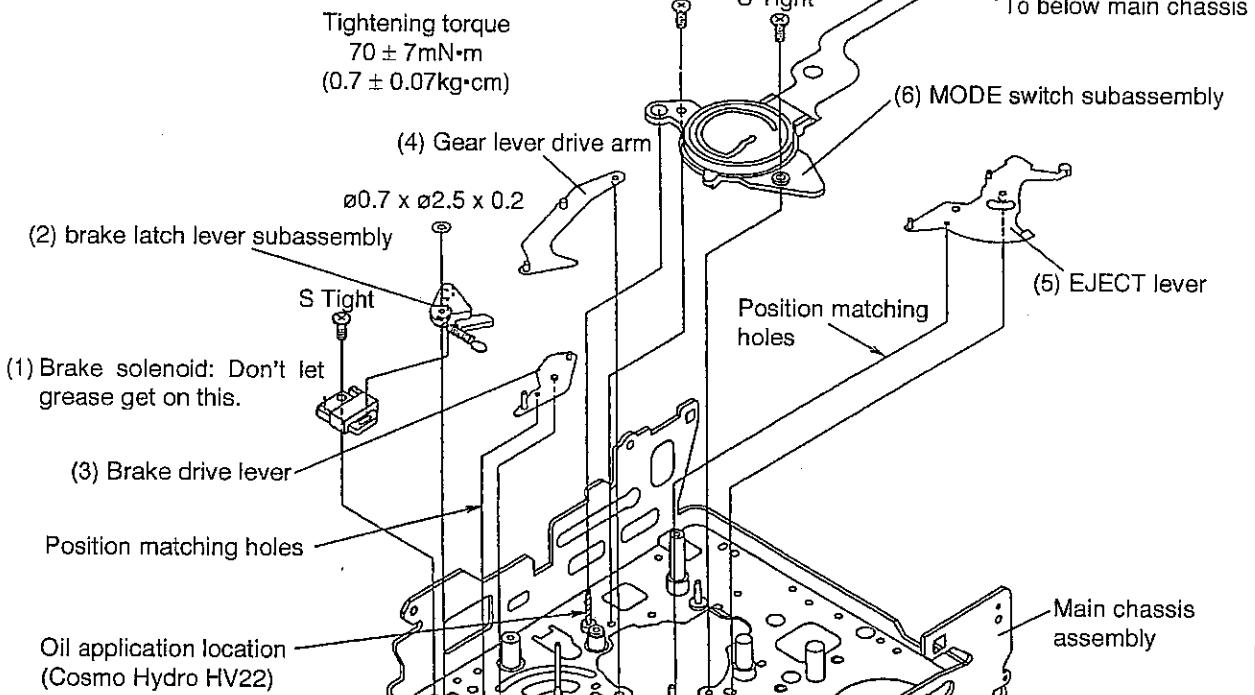

Fig. 6.

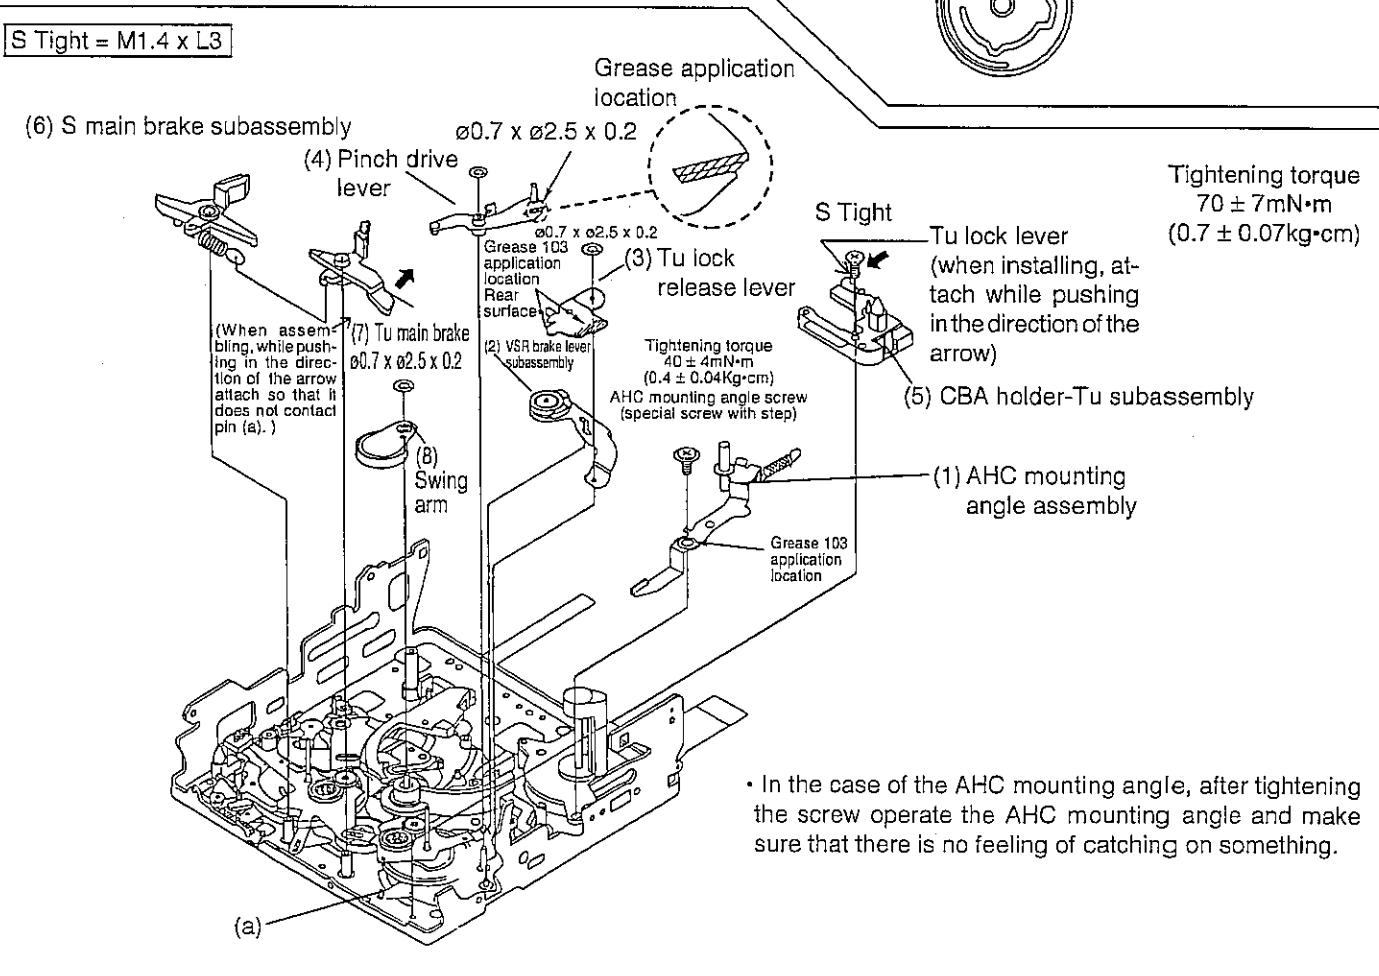

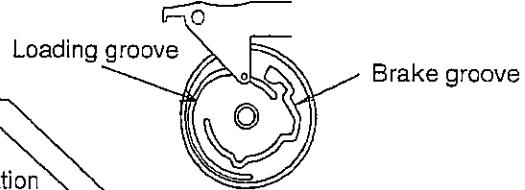

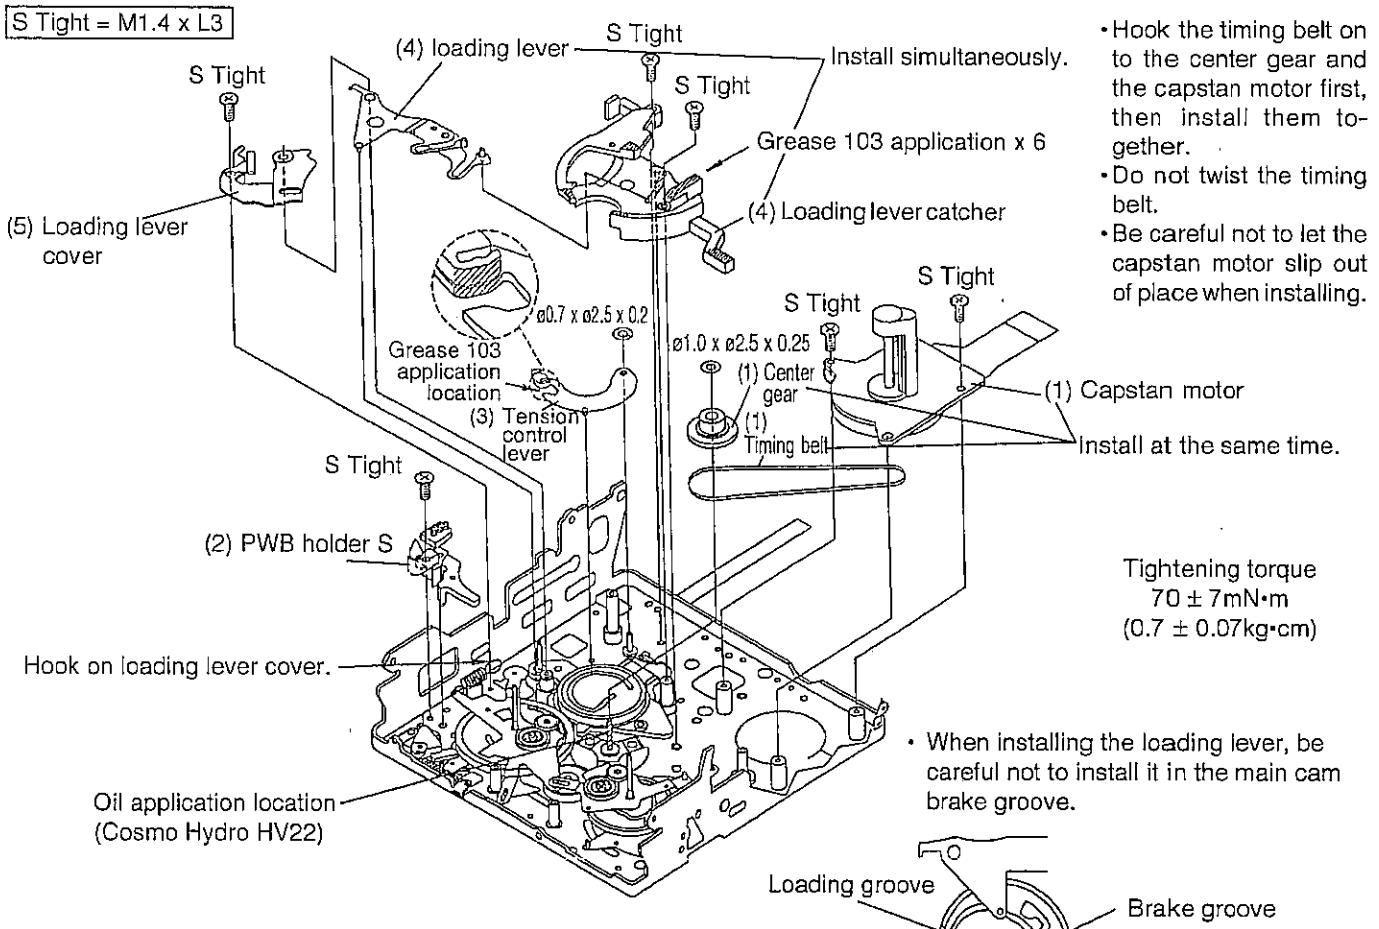

9-5. Reassembly

Note) Numbers before part names are given as a guide to the order of assembly.

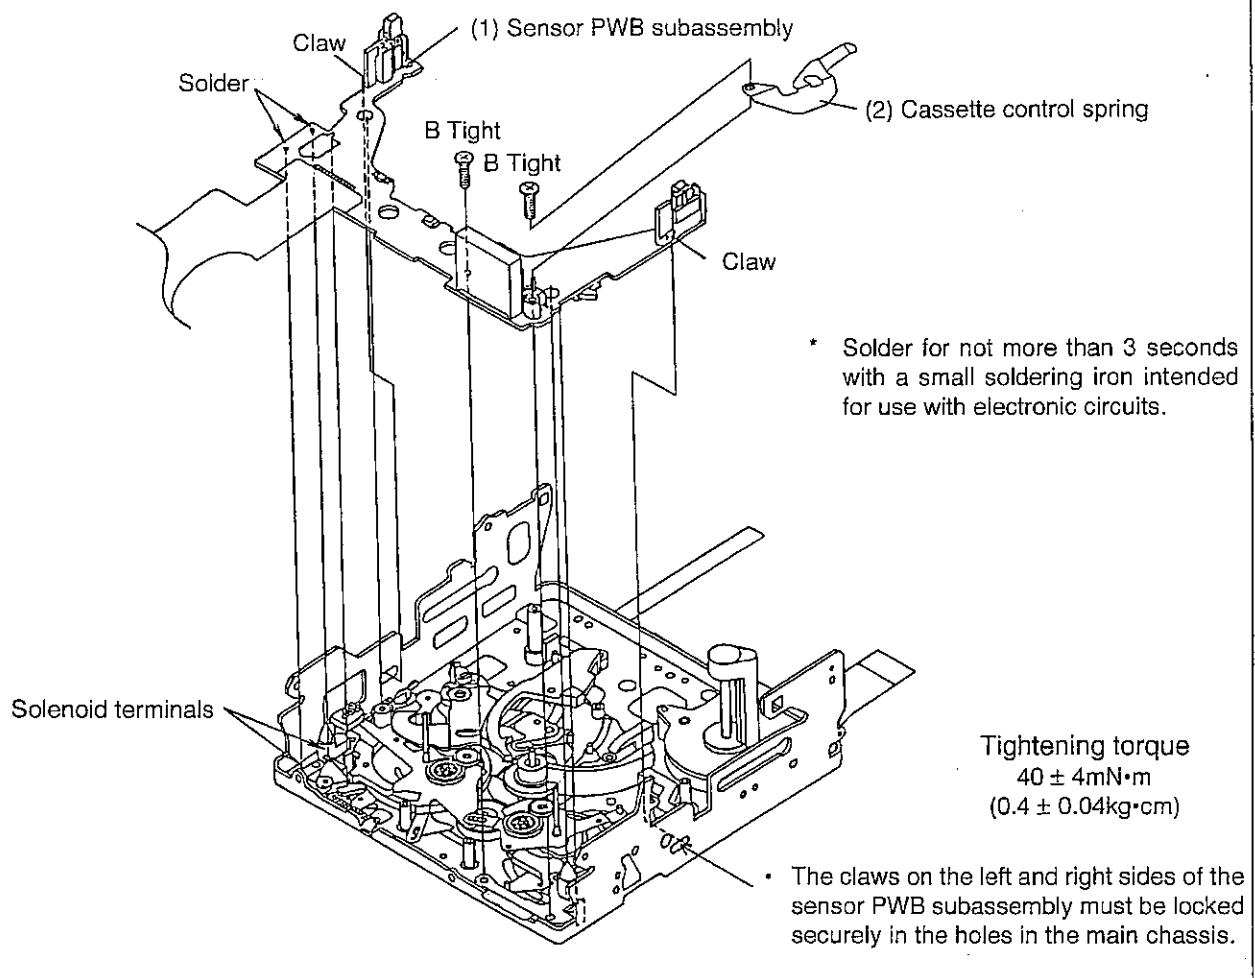

S Tight = M1.4 x L3

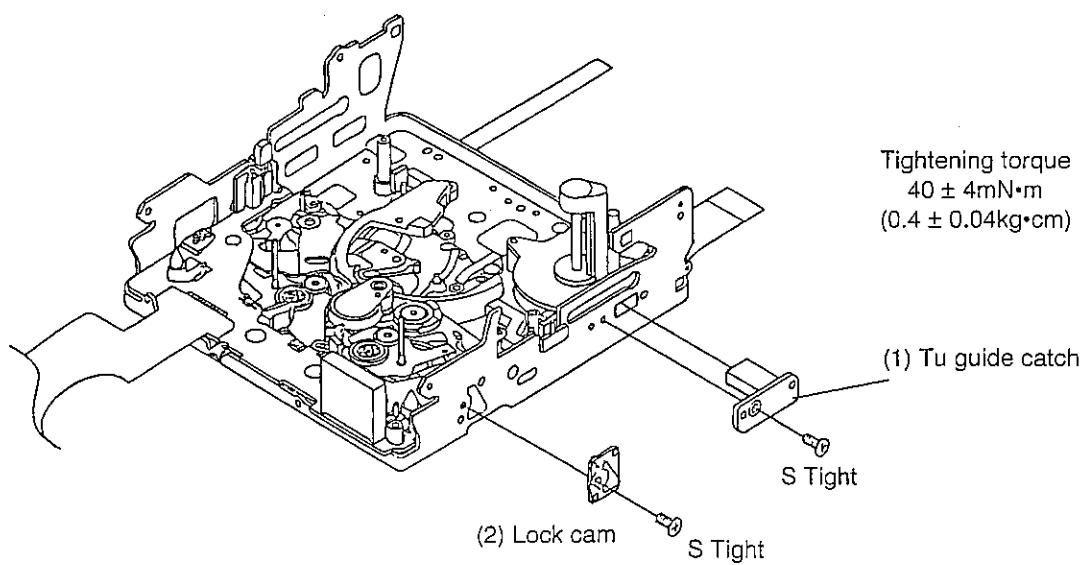

- * In position matching, refer to 9-4 Fig. 6.
- * After reassembling, turn the gear of the MODE switch subassembly by hand and confirm that it turns almost one complete turn. (After confirming this, return it to the position in Fig. 6.)

B Tight = M1.4 x L6

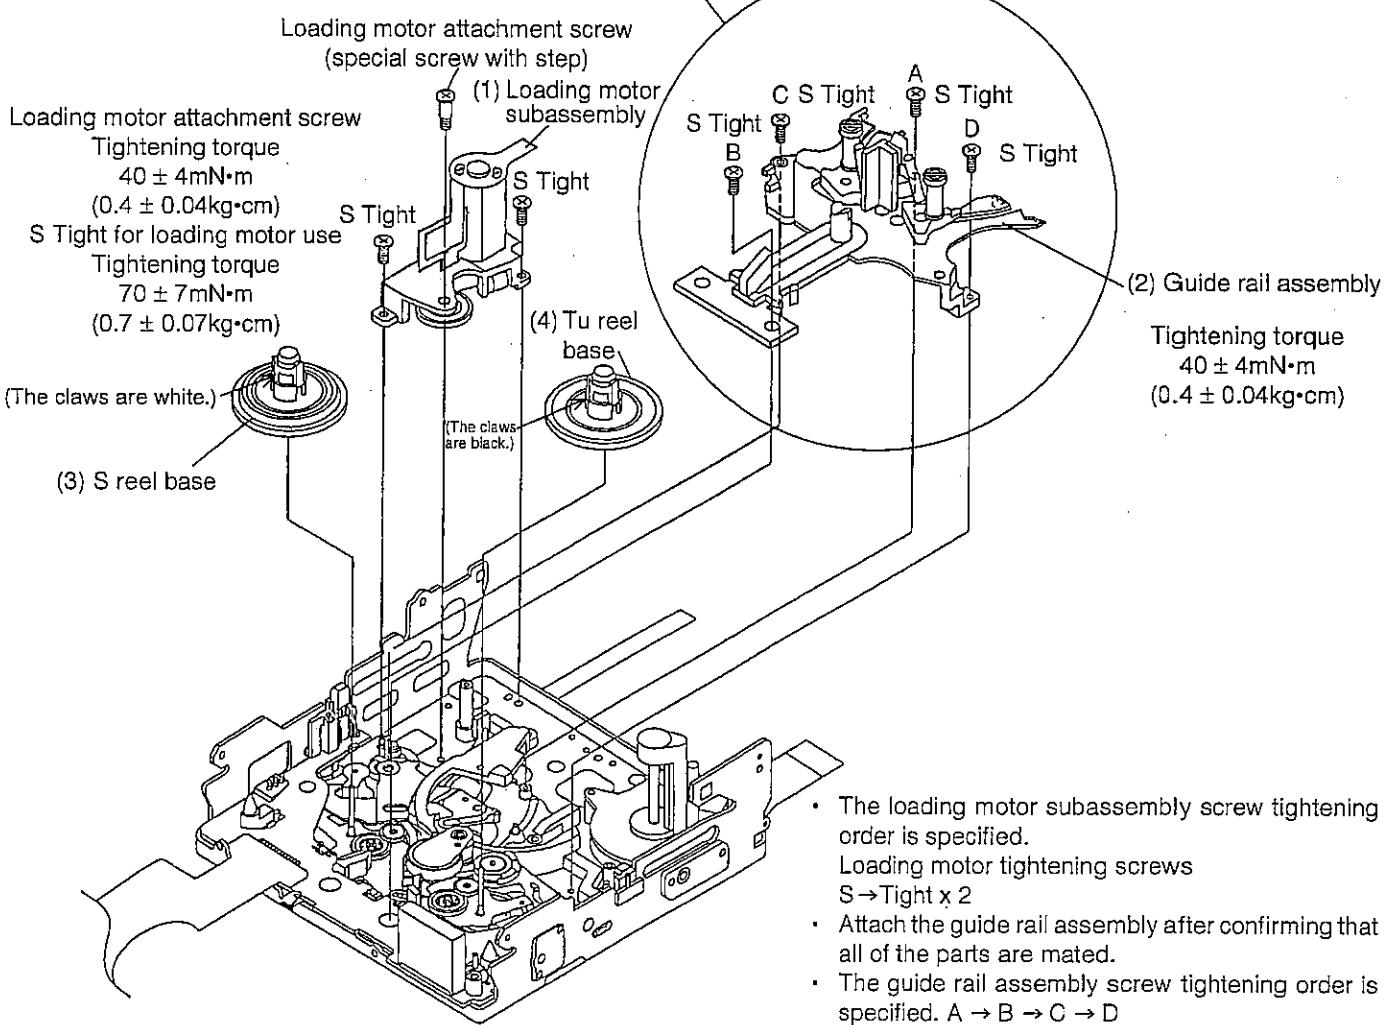

S Tight = M1.4 x L3

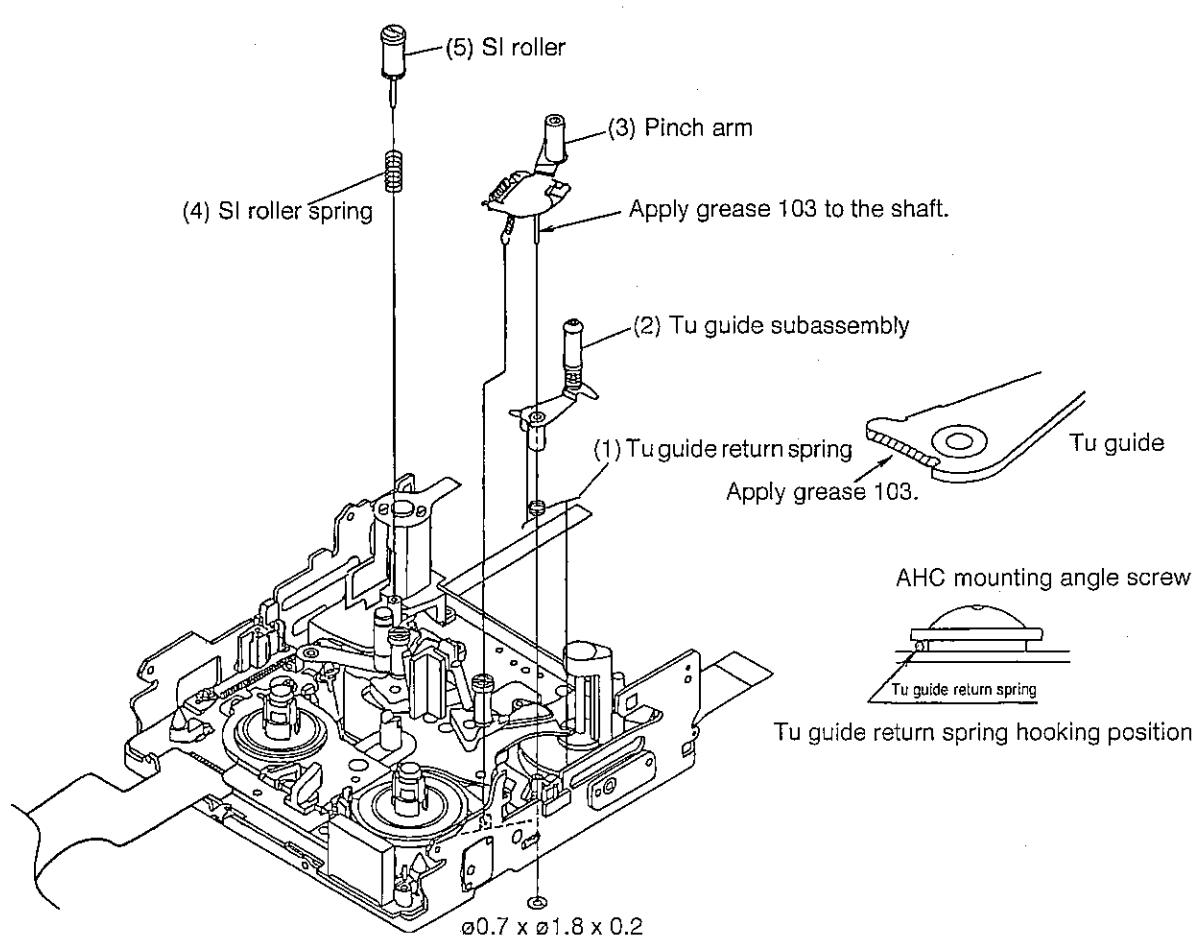

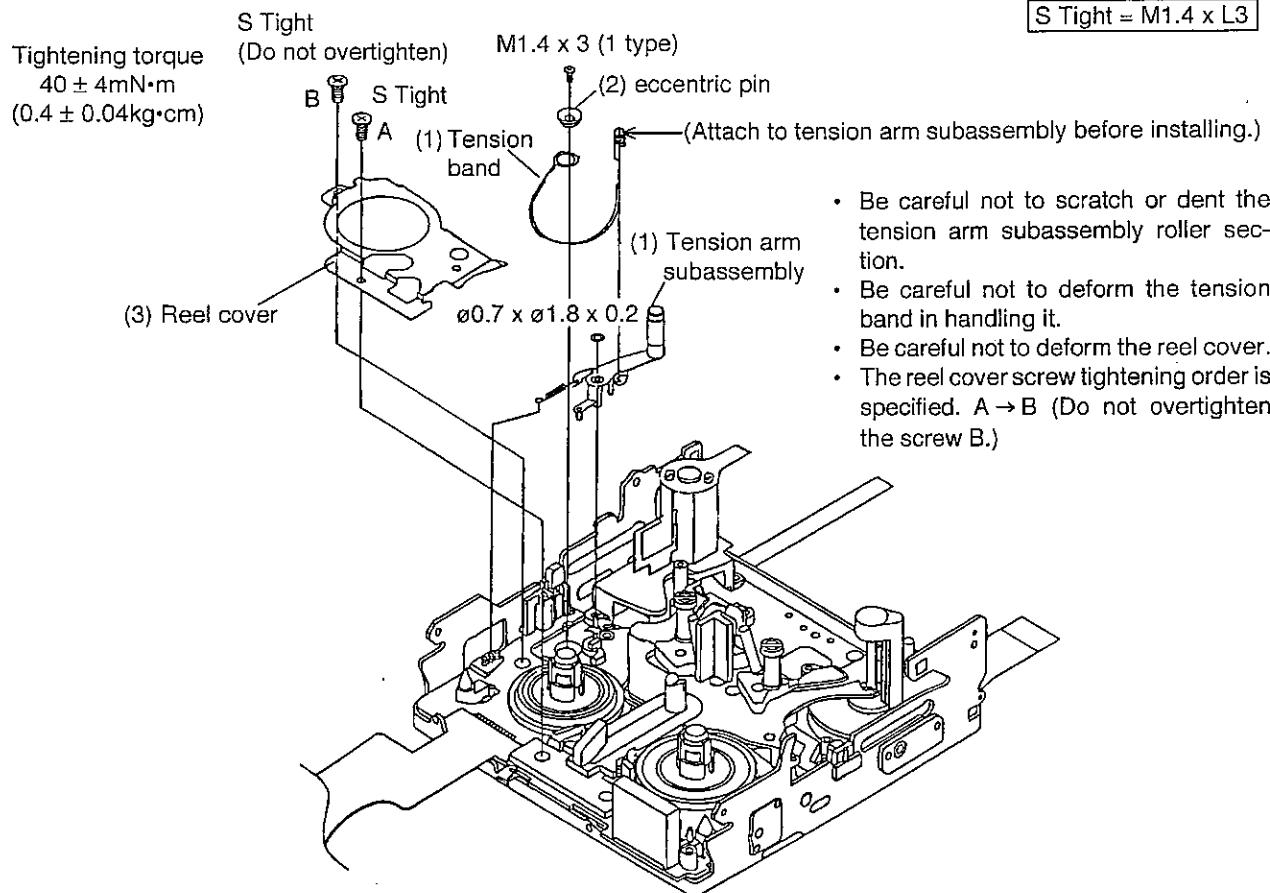

S Tight = M1.4 x L3

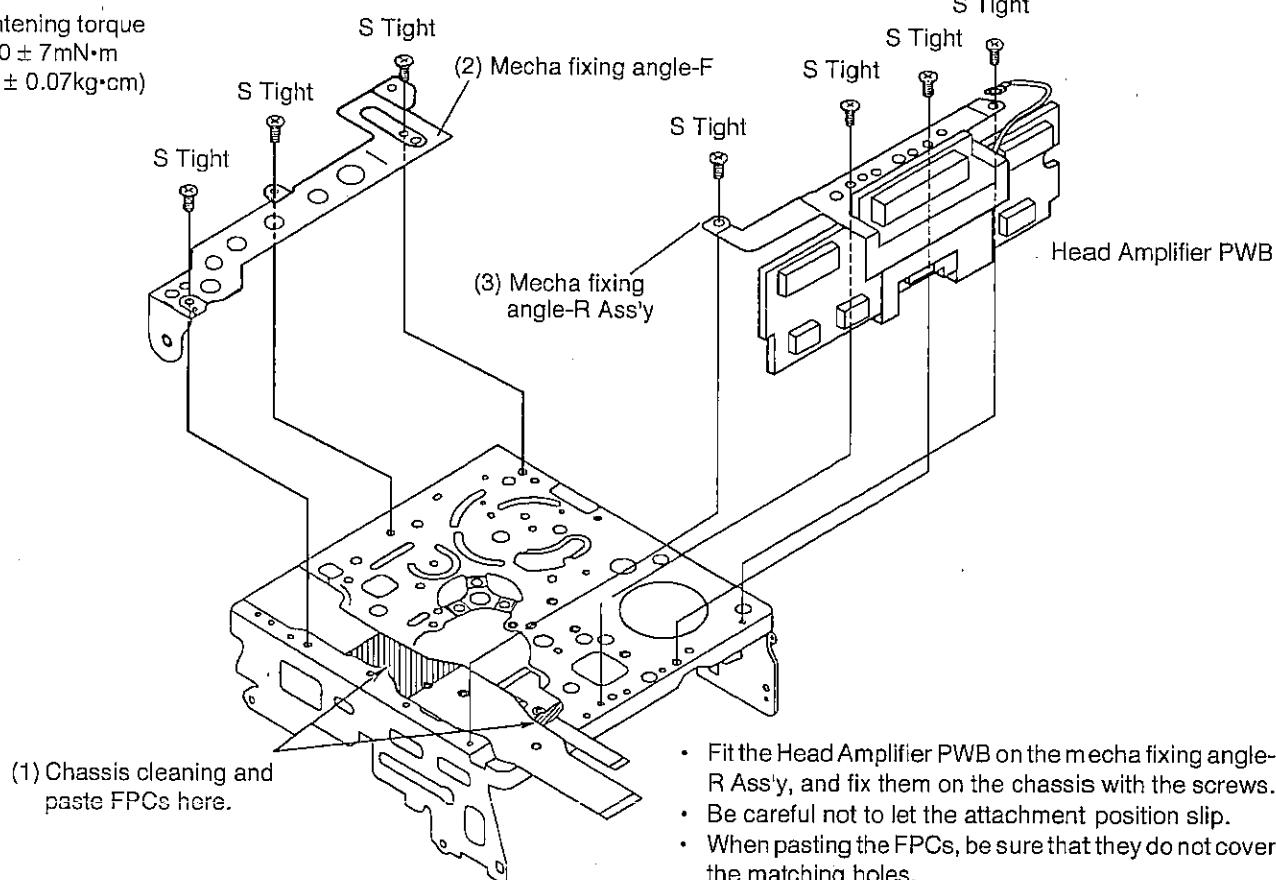

Attach so that the aperture section is on the guide rail side.
 $\phi 0.7\text{--}\phi 1.8\text{--}0.2$

- The loading motor subassembly screw tightening order is specified.
 Loading motor tightening screws
 $S \rightarrow T$ ight $\times 2$
- Attach the guide rail assembly after confirming that all of the parts are mated.
- The guide rail assembly screw tightening order is specified. $A \rightarrow B \rightarrow C \rightarrow D$

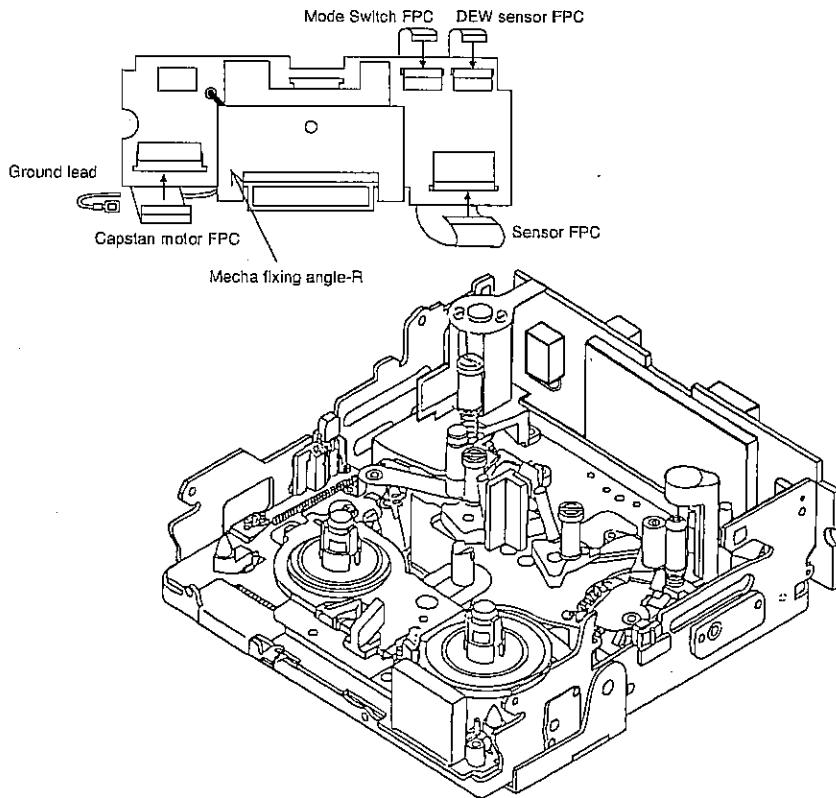

Tightening torque
 $70 \pm 7\text{mN}\cdot\text{m}$
 $(0.7 \pm 0.07\text{kg}\cdot\text{cm})$

- Fit the Head Amplifier PWB on the mecha fixing angle-R Ass'y, and fix them on the chassis with the screws.
- Be careful not to let the attachment position slip.
- When pasting the FPCs, be sure that they do not cover the matching holes.
- Lay the ground lead as shown above.

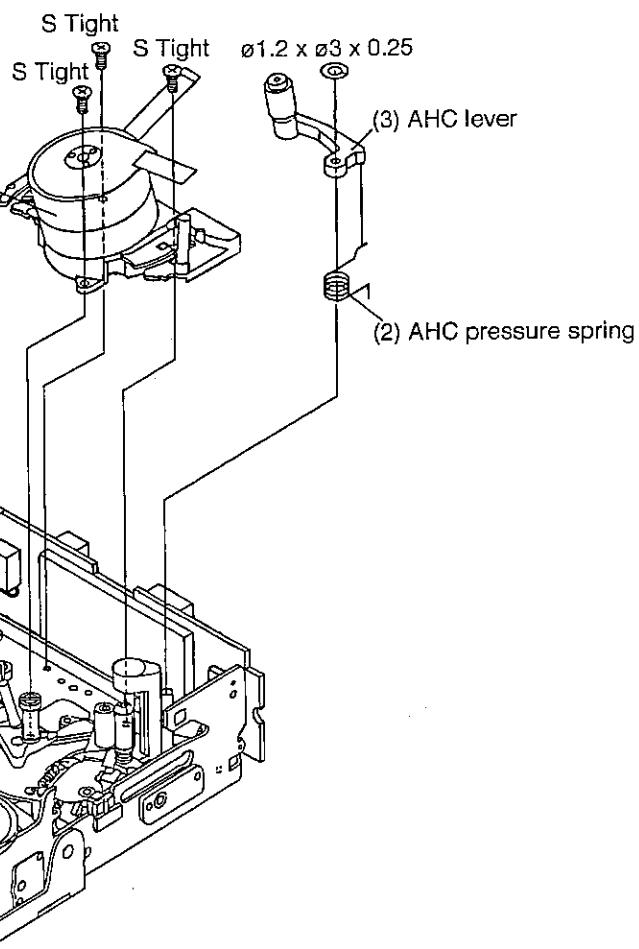

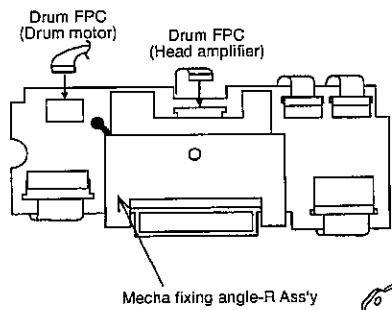

(2) Insert the FPC into the connector.

S Tight = M1.4 x L3

Tightening torque
 $70 \pm 7\text{mN}\cdot\text{m}$
($0.7 \pm 0.07\text{kg}\cdot\text{cm}$)

- (1) Upper/Lower Drum assembly
(4) Insert the FPC into the connector.

10. ADJUSTING THE ELECTRICAL CIRCUITS

— Precautions for making adjustments —

- The adjustment methods described herein are used, in most cases, when the expendable mechanical parts, including the video head, have been replaced, at which time the electrical circuits need to be readjusted. Before adjusting the electrical circuits, make sure that the mechanism works properly (i.e., the mechanism is properly adjusted). In case of the occurrence of any problem to the electrical circuits, be sure to use the specified measuring instruments to locate the area to which the problem is occurring, and then take the necessary action, including repair, replacement or adjustment, exactly as instructed in the electrical adjustment methods that will follow.

Do not attempt to make adjustments without using the proper measuring instruments.

- This machine is configured so that the electrical circuits inside its PWB unit are composed, for the most part, of high-density, small surface-mounted component parts for downsized machine body.

To perform repair service or parts replacement, do so using a soldering iron, but in as short a time as possible; this is because surface-mounted component parts are generally so small in size and susceptible to heat, as compared with the large discrete parts used in TV sets, desk-top video decks, etc., that attempting to heat their electrodes for a longer time than is necessary with a soldering iron may result in their becoming defective.

This applies particularly when replacing the laminated chip capacitors.

For this purpose, ceramic soldering irons with a temperature regulator are recommended (iron tip temperature 250°C and soldering time 5 seconds or shorter).

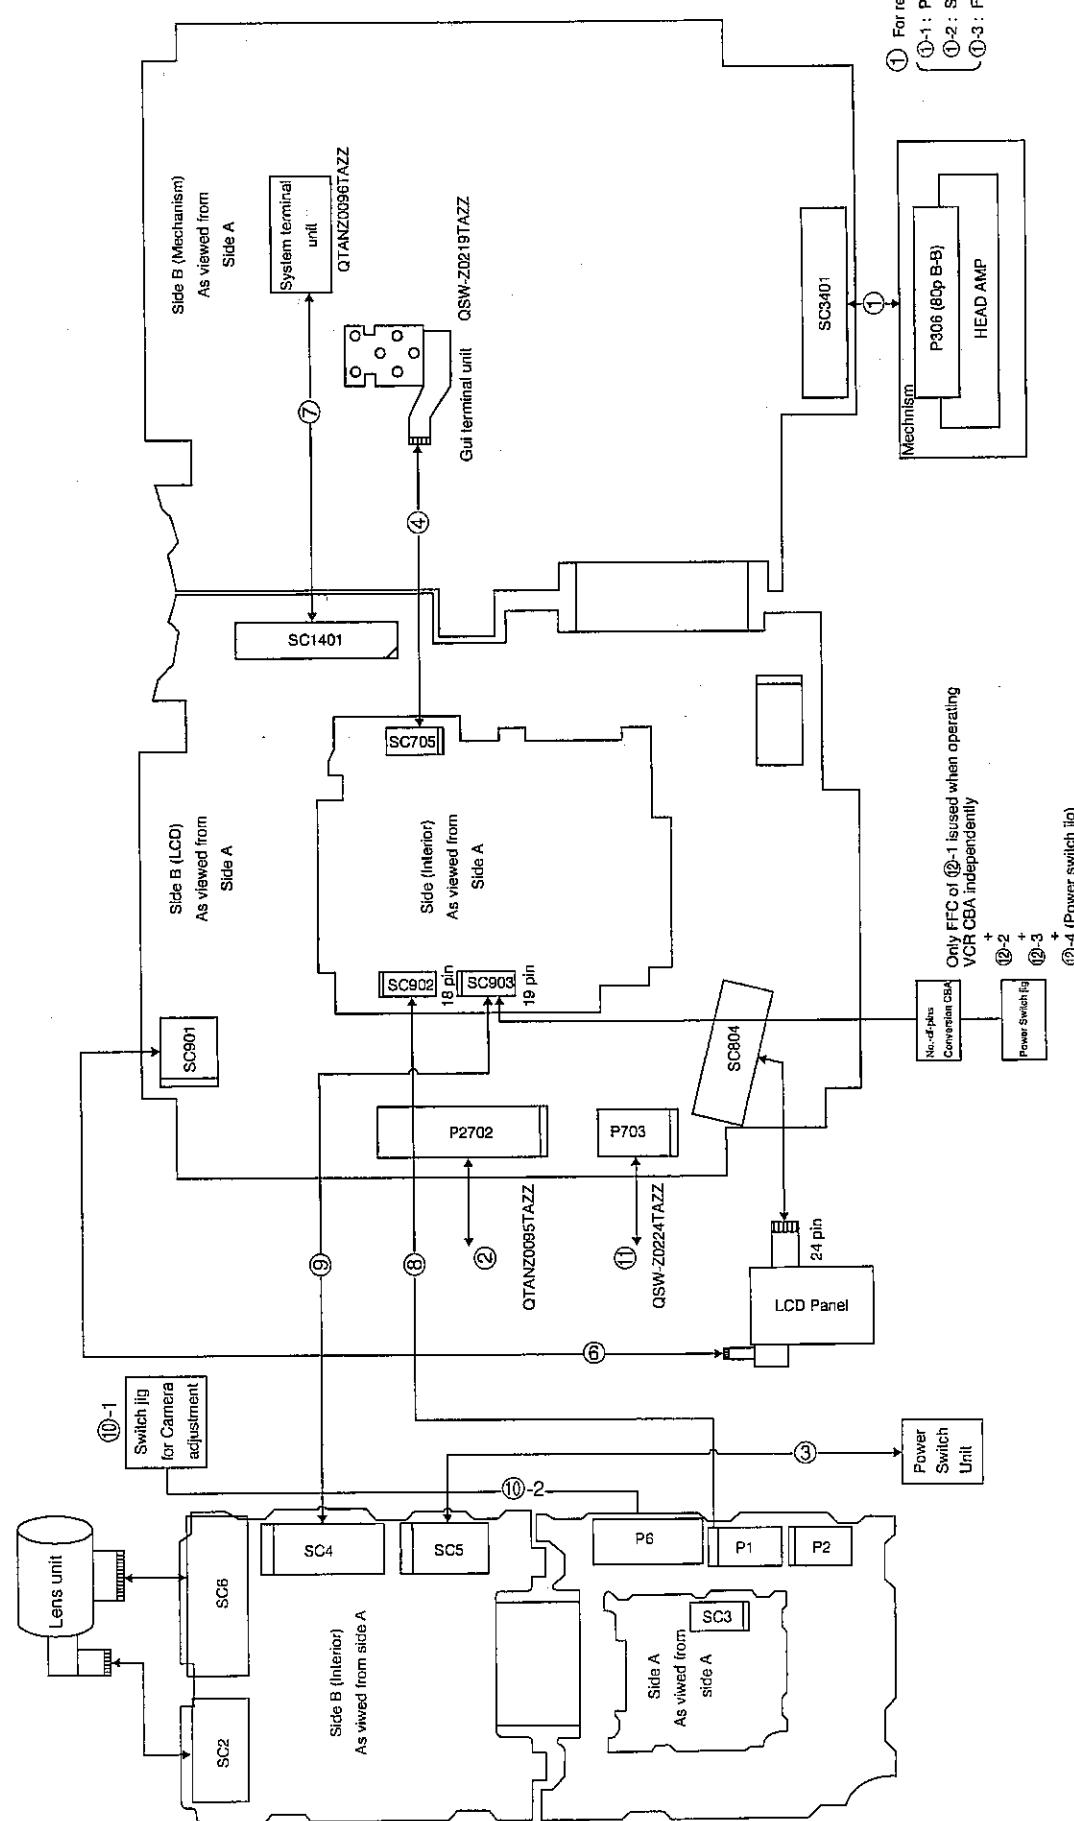

10-1. Adjusting the LCD video screen

• Measuring jigs

- Color monitor screen
- Digital voltmeter
- Signal generator (NTSC pattern generator LCG-401/401YC, made by Leader)
- Audio signal generator (CR generator)
- AC adapter
- Stereo AV output cable (supplied)

- Oscilloscope
- Frequency counter
- Blank video cassette
- DC cable (supplied with AC adapter)
- Extension cable for video section

- Vector scope
- DC power supply
- Alignment tape 90ADVC-TAPE (color bars)
- Adjustment remote control

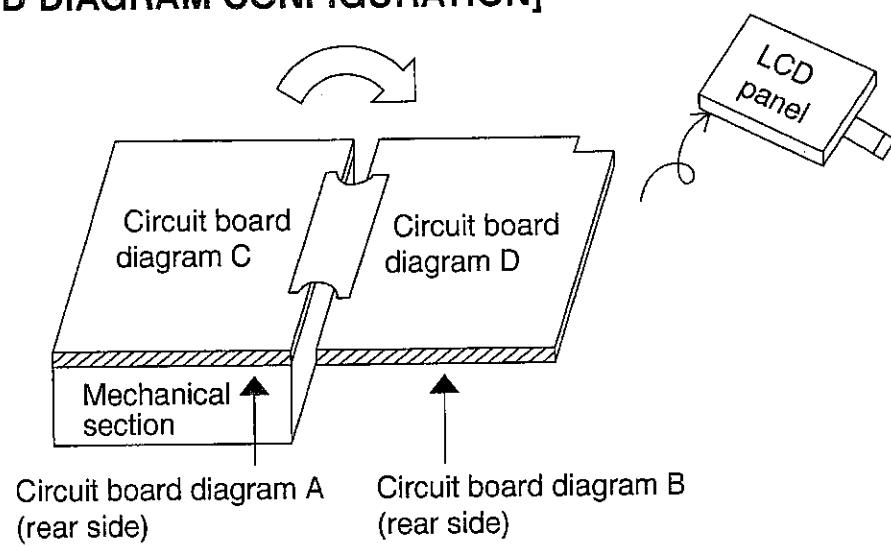

Specifications of VL-DC1U service jigs

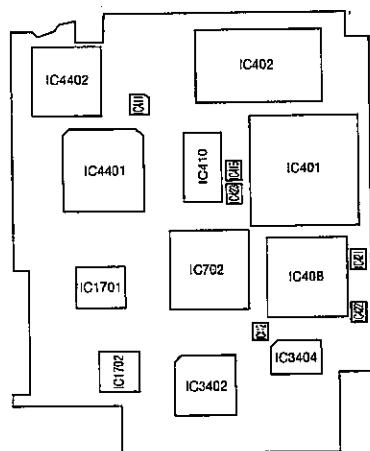

NO.	Connected to or between:	Connector REF. NO.	No. of pins	Pitch	Cable length	Part code
1)	H/A ↔ VCR	P306 ↔ SC3401	80B-B	0.5		QCNW-1398TAZZ
(1)	H/A	P306	↓	↓		QPWBN2582TAZZ
(2)	VCR	SC3401	↓	↓		QPWBN2583TAZZ

12-1)	Power switch (when operating VCR)	SC903 ↔ No.-of-pins conversion	19	0.5		QCNW-1381TAZZ
-2)	CBA independently	Conversion from 18 to 19 pins				QPWBF2612TAZZ
-3)		No.-of-pins conversion	18	0.5		QCNW-1356TAZZ
-4)		↔ power switch jig				QPWBF2550TAZZ
13)	Adjustment remote control					RRMCG0033TASA

- * Jig No. 7 can connect SC1401 directly with the system terminal unit (QTANZ0096TAZZ). [For monitor output, AV pack is required.]
- * Jig No. 12 is used only in the case where the VCR PWB is operated independently for reasons such as because there is no camera or because no camera is required.

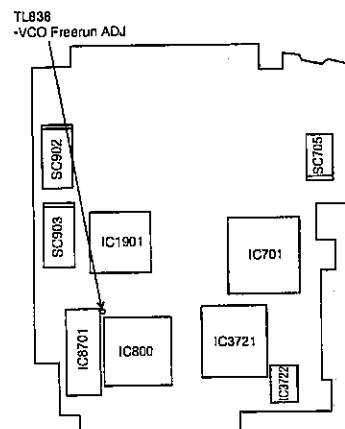

[CIRCUIT BOARD DIAGRAM CONFIGURATION]

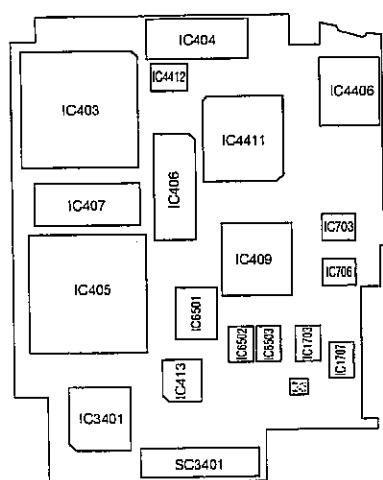

(CIRCUIT BOARD DIAGRAM C)

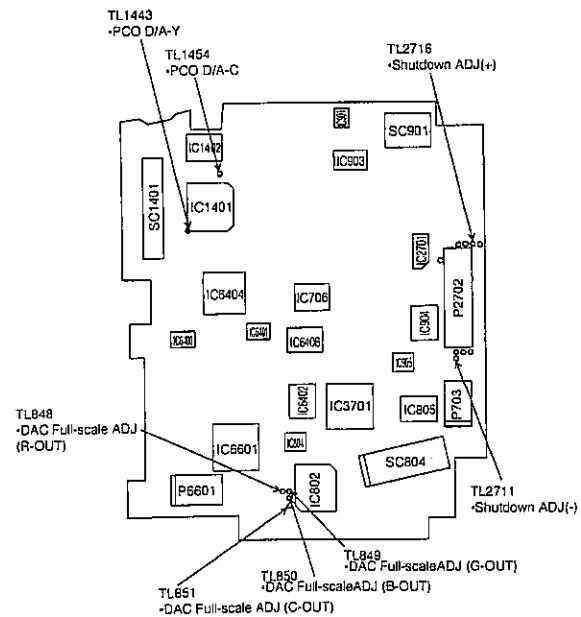

(CIRCUIT BOARD DIAGRAM D)

(CIRCUIT BOARD DIAGRAM A)

(CIRCUIT BOARD DIAGRAM B)

[Making adjustments]

Adjusting the servo system controller and related parts

1. Setting the system codes

Replacement of IC706E²PROM requires the following data to be set in this order.

[Procedure]

Set the unit to the VCR mode and set the data for each address.

	Address	Data
1) Model code	01	00
	09	FF
2) Destination code	02	00
	0A	FF
3) Specifications code	03	00
	0B	FF
4) Menu selection code	04	00
	0C	FF
5) Software switching code	05	00
	0D	FF
6) Calendar switching code	07	96
	0F	69
7) 1/4 track	1F	00

2. Shutdown voltage adjustment

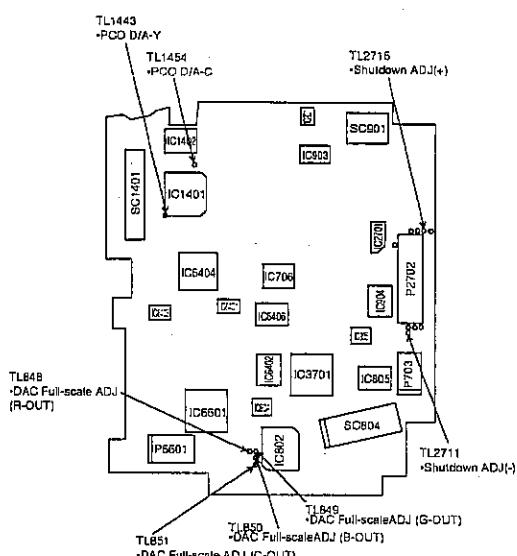

- * Some adjustment step numbers are followed by when to perform the adjustment.

Examples

- 1) During E²PROM replacement
- 2) During circuit board (Main) replacement
- 3) During LCD replacement
- 4) During mechanism replacement

- 1) During E²PROM replacement

(CIRCUIT BOARD DIAGRAM B)

[Procedure]

- 1) Load the blank cassette into the deck.
- 2) Set the unit to the camera mode, and start recording.
- 3) Press the "CONTINUE" and "TEST SEL" keys on the adjustment remote control in this order.
- 4) Select T-03 with the "REW" and "FF" keys and press the "PLAY" key.
→ This shifts the operation mode to the shutdown voltage adjustment mode.
At this time, the display in which T-03 is flashing changes to the normal REC screen.
- 5) Measure the voltage between TL2716 (+) and TL2711 (-) using the digital multi-meter, and supply external power until the power voltage is adjusted to +2.80 VAC.
- 6) Press the "backlight compensation (▶/◀)" key. (The backlight compensation indicator changes from blue to yellow.)
→ This executes automatic adjustment.
At this time, with the "BATTERY" indication appearing only for an instant, the adjustment is complete.
- 7) Press the "CONTINUE" key on the adjustment remote control.

3. HSWP adjustment

[Procedure]

- 1) Play back the alignment tape in the video mode.
 - 2) Press the "CONTINUE" and "HSWP ADJ" keys on the adjustment remote control in this order.
- This executes the HSWP adjustment.

At this time when the adjustment is successful, the tape should stop automatically. If the adjustment is not possible, the tape will be ejected automatically, thereby terminating the adjustment mode.

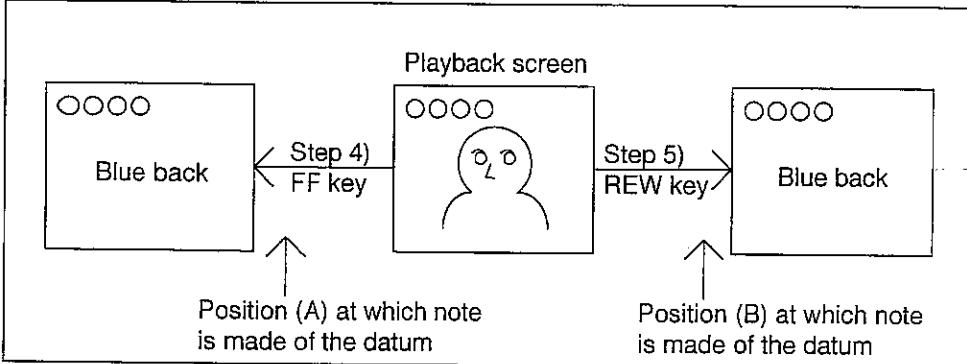

ADJUSTING THE ELECTROMAGNETIC CONVERSION CIRCUIT SYSTEM

Note: During the adjustment of the electromagnetic conversion circuit system, keep R3602 out of operation.

PLL VCO adjustment

[Procedure]

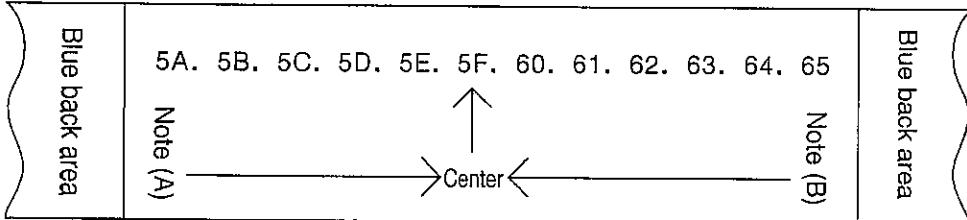

- 1) Play back the alignment tape (or a self-recorded tape).
- 2) Call the adjustment mode (V-ADJ).
- 3) Set the address to "2C," and call the data.
- 4) Using the FF key, vary the data that has been called until the playback image screen changes to the blue back screen. Then use the REW key to vary the data backward until the data point is found where the screen starts to switch from the blue back to the playback image. At this time, take note of the data obtained at this point.
- 5) As in the above step (4), vary the data that has been called - this time using the REW key - until the playback image screen changes to the blue back screen. Then use the FF key to vary the data backward until the data point is found where the screen starts to switch from the blue back to the playback image. At this time, take note of the data obtained at the point.

-) Calculate the data taken note of at the points (A) and (B) to find the center of these data, and shift to and determine the central data by using the FF or REW key.

Example:

If the data taken note of at the points (A) and (B) are 5A and 65, respectively:

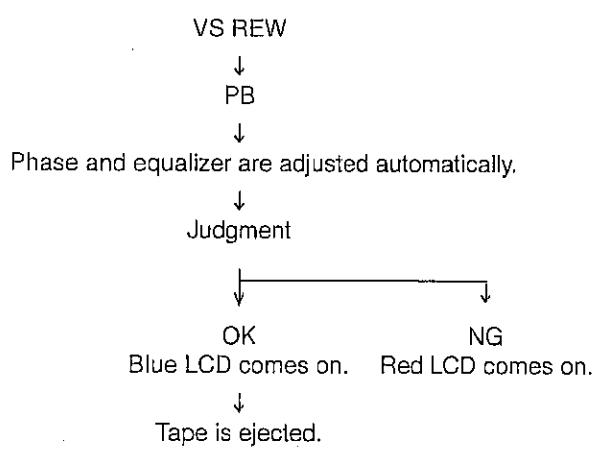

The central data is set to "5F".

- 1) During mechanism replacement
- 2) During E²PROM replacement (IC303 inside the head amplifier circuit board)

- 1) During circuit board (Main) replacement
- 2) During E²PROM replacement

Phase and equalizer adjustment → (Performed in the VCR mode)

- 1) Load a self-recorded tape into the deck.
- 2) Select and fix the TEST MODE 0F on the adjustment remote control, and the automatic adjustment will start (i.e., the following sequence is executed automatically).

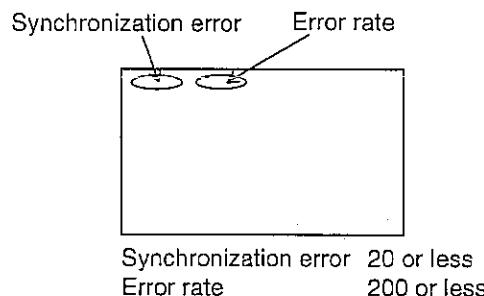

4) Error rate check

Select and fix the TEST MODE 0C on the adjustment remote control.

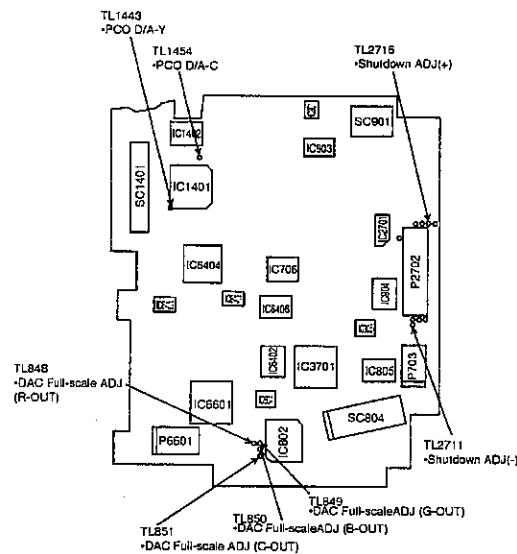

5) Manual adjustment method (video adjustment mode)

For phase, vary the data for the address 2B, and for equalizer, vary the data for the address 27, to set the error rate to the minimum.

Adjusting the video I/O circuit system

(CIRCUIT BOARD DIAGRAM B)

I/O filter adjustment

Mode]

EE mode for color bar input (video power side)

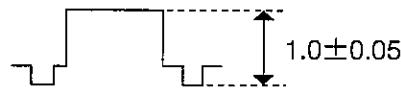

Procedure]

-) Call the adjustment mode (V-ADJ).
-) Set the address to "21" and call the data.
-) Set the data to "60."

PCO D/A-Y adjustment

Mode]

EE mode for any given video signal

1) During E²PROM replacement

Test point]

TL1443 (connected to oscilloscope)

Procedure]

-) Call the adjustment mode (V-ADJ).
-) Set the address to "22" and call the data.
(100% white signal is output.)
-) Vary the data with the FF and REW keys to set the signal appearing at TL1443 to $1.0 \text{ Vp-p} \pm 0.05$.
Data should be set within the range from 00 to 60.

PCO D/A-C adjustment

Mode]

No input

Test point]

TL1454

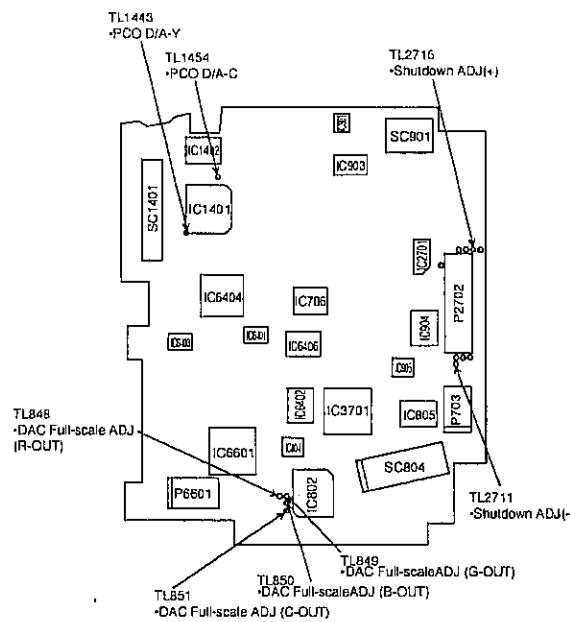

1) During E²PROM replacement

Procedure]

-) Call the adjustment mode (V-ADJ).
-) Set the address to "23" and call the data.
-) Vary the data with the FF and REW keys to set the signal appearing at TL1454 to $1.28 \text{ Vp-p} \pm 0.05$.
Data should be set within the range from 00 to 60.

Adjusting the LCD circuit * To make this adjustment, set the backlight switch to the "NORMAL" position.

(CIRCUIT BOARD DIAGRAM B)

1. VCO free-run ADJ

[Mode]

VCR AV input

[Address]

VCR ADJ 32

[Measuring point]

TL838 (HSY)

[Adjustment rating]

15.734 KHz (NTSC) \pm 100Hz

[Procedure]

- 1) Change the VCR ADJ address from 57 to FB.
- 2) Connect the oscilloscope to TL838 and adjust it to the specified rating with the VCR ADJ address 32.
(At this time, 6 VAC is output from TL838.)
- 3) Set the VCR ADJ address 57 to FF.
Note: Setting the address 57 to FC/FD turns off the LCD screen. However, disregard this and keep the data changed; otherwise, the screen will fail to be returned to.

1) During E²PROM replacement

VL-DC1U

DAC full-scale ADJ

[Mode]

VCR AV input

[Addresses]

VCR ADJ 3E (R/G)

VCR ADJ 3D (B/C)

[Measuring points]

TL848 (R OUT)

TL849 (G OUT)

TL850 (B OUT)

TL851 (C OUT)

[Adjustment rating]

1.0 Vp-p ± 15 mV

[Procedure]

Change the VCR ADJ addresses 47, 49 and 64 to FE, 7F and 7F, respectively. (At this time, remember to take note of the data before changing them.)

With the VCR ADJ address 3D, set the TL848/849 output voltage to the adjustment rating, and with the synchronizer, set the peak voltage also to the adjustment rating, in such a way that the both TPs' voltages will be averaged into the rated mean value.

With the VCR ADJ address 3D, set the TL850/851 output voltage to the adjustment rating, and with the synchronizer, set the peak voltage also to the adjustment rating. (Same as in Step (2) above)

Set the changed address data back to normal.

Note: Setting each address data back to normal leaves the LCD screen white. At this time, turning off and on the main power will restore the screen (the lithium battery should be removed).

. COM-Bias ADJ

[Mode]

VCR AV input

- 1) During E²PROM replacement
- 2) During circuit board (Main) replacement
- 3) During LCD replacement

[Address]

VCR ADJ 33

[Measuring point]

LCD panel display area

[Adjustment rating]

Minimum

[Procedure]

) Feed 40% white signal to the AV input jacks.

) Set the illumination meter (TOPCON IM-3) onto the LCD panel surface. (No external light is allowed to enter.)

) Set the output wave form ripple on the illumination meter to the minimum level.

Response time: 0.6 sec

[Remarks]

Make this adjustment after 5-minute or longer aging.

4. W/B ADJ

[Mode]

VCR AV input

[Address]

VCR ADJ 30 (R)

VCR ADJ 31 (B)

[Measuring point]

LCD panel display area

[Adjustment rating]

Based on the standard monitor

[Procedure]

- 1) Feed 40% white signal to the AV input jacks and the standard monitor.
- 2) Adjust the signal level with the VCR ADJ addresses 30 and 31 until it becomes the same as that of the standard monitor.

[Remarks]

Make this adjustment after 5-minute or longer aging.

- 1) During E²PROM replacement
- 2) During circuit board (Main) replacement
- 3) During LCD replacement

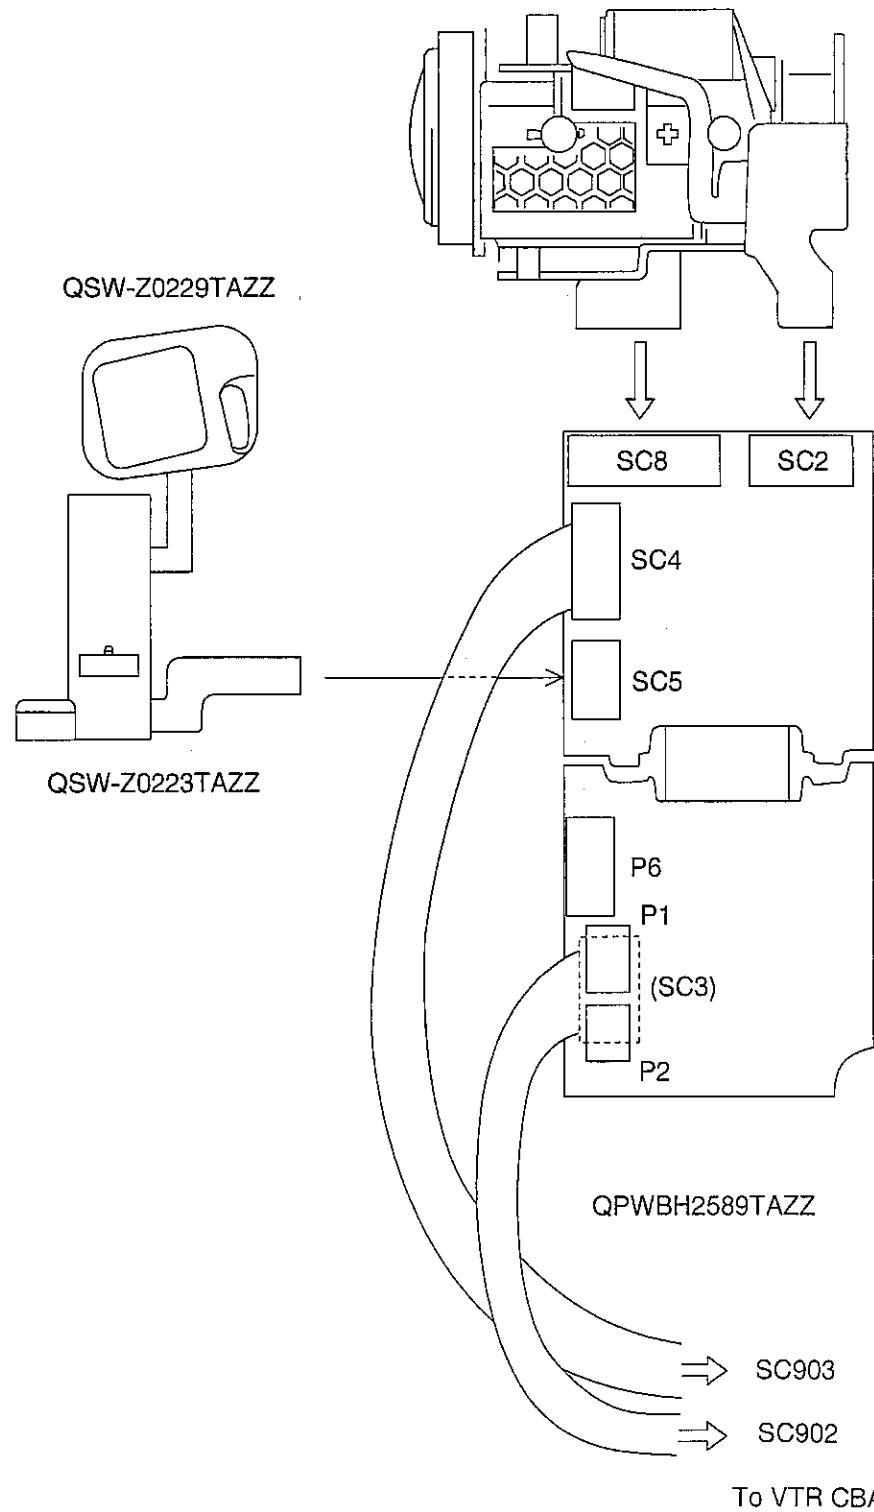

0-2. Camera Section Adjustments

0-2-1. Camera section service

1) Subjects, measuring instruments and jigs needed for camera section service and adjustments

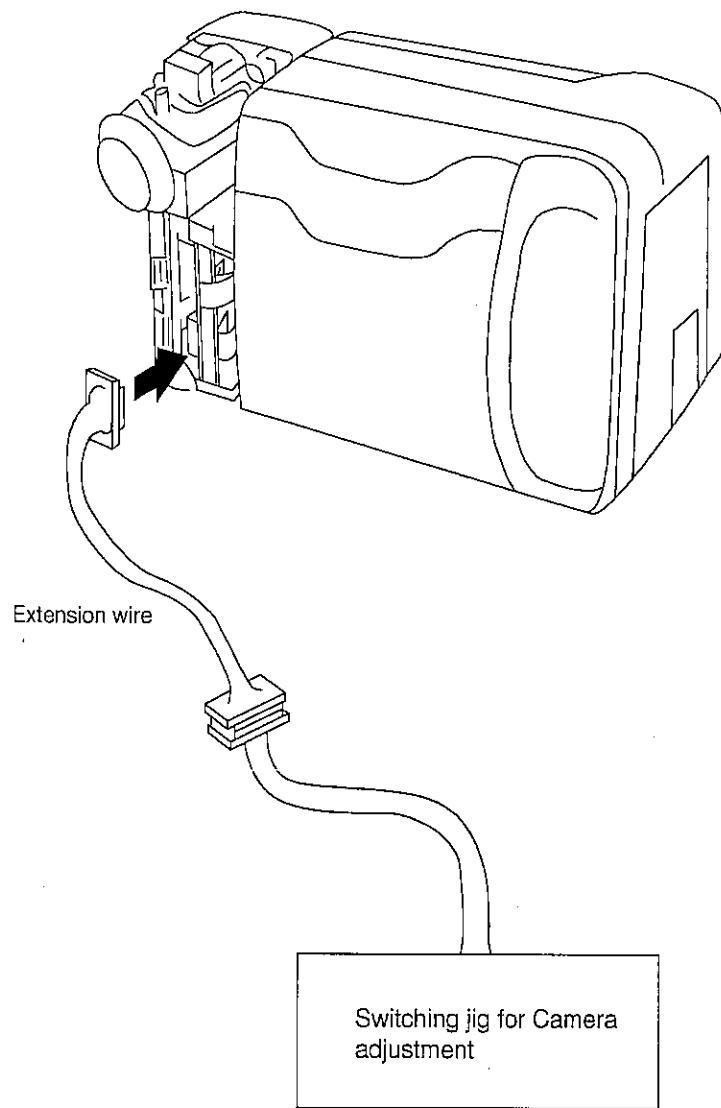

- Gray scale chart
- White chart
- Color bar chart
- Oscilloscope
- Digital voltmeter
- Vector scope
- Frequency counter
- Illumination meter
- Color temperature meter
- Color video monitor
- Video output cable
- AC adaptor
- Extension cables
- Switch jig for adjustment use
- Remote control unit for servicing
- DC power supplier
- Light box
- INF adjustment lens
- Halogen Light (2 pcs.)

2) Standard connections diagram at time of camera service

(3) Connections at the time of camera adjustment

When performing camera adjustments, remove the camera's front. Then connect connector P6 on the Camera CBA to the switch jig for adjustment use via a extension wire.

(4) Switch jig for camera section adjustments

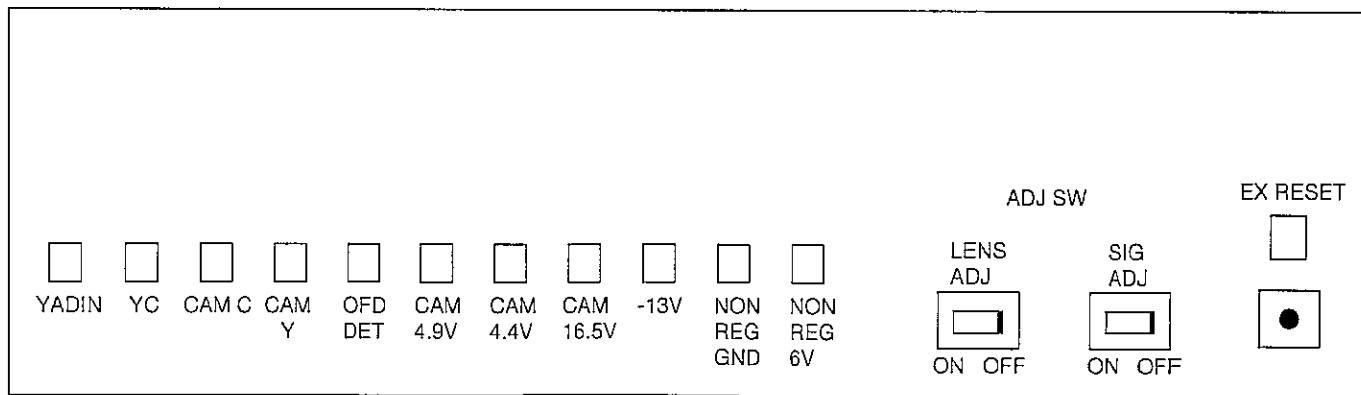

The jig is provided for switching for the purpose of waveform observation test point and camera signal system adjustments and zoom lens system auto focus adjustments during the camera adjustments. Note that some test points will be under different voltages from the markings. This is not a trouble, however.

CAM 4.4V TP ← Actually about 2.9V applied.

-13V TP ← Actually about -15V applied.

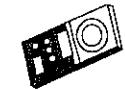

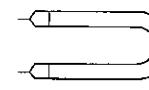

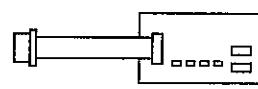

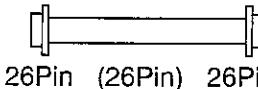

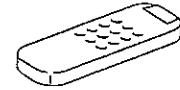

+16.5V TP ← Actually about 15V applied.

All of the switches on the jig remain OFF during use.

10-2-2. List of camera jigs and tools

Note: N indicates a new jig.

No.	Name of jig	Part code	Shape	Note
1	Gray scale chart (390 x 520mm)	JiGCHART-1		
2	Color bar chart (240 x 320mm)	JiGCHART-4		
3	Illumination meter (0 to 3000 lux)	JiGMETER-1		
4	Color temperature meter (1600 to 400000 degrees K)	JiGMETER-2		
5	Color temperature conversion filter (3200 degrees K → 6800 degrees K)	JiGOYA-LB165		
6	PC plate connector drawer	JiGTH-SS10		
7	Camera adjustment switch plate (QCNW-1220TAZZ)	QCNW-1220TAZZ		
8	Extension wire (camera adjustment switch plate ↔ P8)	QCNW-1494TAZZ	 26Pin (26Pin) 26Pin	N
9	Remote control unit for servicing	RRMCG0033TASA		

10-2-3. Adjusting the camera unit

(1) Preparations for adjustments and items to be checked

- 1) Set up the light box so that the entire pattern is evenly lit. Set the color temperature to 3200°K.
- 2) Use test patterns that are not dirty nor discolored.
- 3) If the electrical circuitry gets in trouble, be sure to pinpoint the trouble spot with a measuring instrument and repair or replace the defective part.

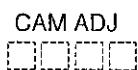

(2) Remote control for servicing RRMCG0033TASA

To adjust the camera section of this machine, the remote control for servicing (RRMCG0033TASA) is used. The adjustment is made in such a manner that the remote control writes necessary data by way of the microprocessor to the specific addresses on the E²PROM (the ROM on the lens unit).

1) To adjust the camera:

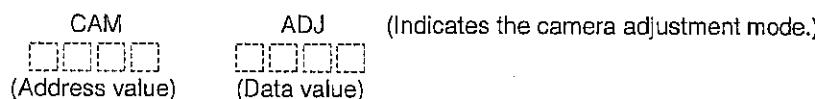

Press the "CONTINUE" key first and then the "CAM ADJ" key.

This will show

on the LCD screen, thereby having the camera unit ready for the adjustments.

2) Descriptions of the displays

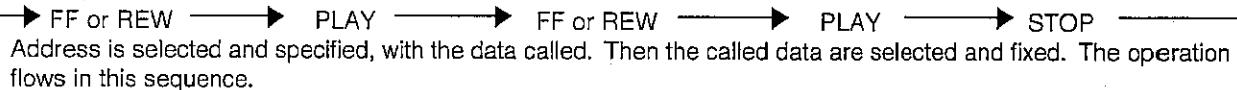

* The address values for this machine range from 0000 to 04FF and from 0F00 to 0FFF.

* The data include byte data (the last two digits are effective) and 2-byte data (the last three digits are effective).

3) Descriptions of the remote control keys

- "FF" key: Increases the address and data values.
- "REW" key: Decreases the address and data values.
- "PLAY" key: Specifies addresses and calls the data.
This key also fixes (i.e., writes to the E2PROM) the data values.
- "STOP" key: Clears the data to enable the selection of address.

4) Operation flow

5) When the adjustment is complete:

Press the "CONTINUE" key to let the "CAM ADJ" display disappear from the screen.

Note: Before terminating the adjustments, make sure that the adjustment mode is neither the auto-focus function adjustment mode nor the camera signal system adjustment mode (these modes are mentioned later).

• Camera unit adjustment modes

The camera unit is adjusted in two types of modes: the auto-focus function adjustment mode and the camera signal system adjustment mode.

(3) Auto-focus function adjustment mode

- The camera unit uses a microprocessor-controlled zoom lens.

The auto-focus circuit incorporated in this unit is designed to execute the image processing where the focusing action is done by taking advantage of the fact that the high-frequency components in the image signals increase as the focus intensifies. Moreover, to achieve high magnifying power with a small lens, the camera unit incorporates the inner focus system in which the focus is shifted by moving the master lens (rear lens) back and forth. This inner focus system is a full-range focus type by which the focus can be shifted from approximately 10 mm to the infinity. It should be noted, however, that since the closest subject distance at the telephoto end is fixed at 1.5 mm, subjects in a closer range than 1.5 mm at the telephoto end will be out of focus. For this reason, the unit is designed so that the zoom control is automatically shifted to the wide angle side until the position is found where the subject can be focused on.

In the auto-focusing system of this unit, the following constitute the important factors:

- Master lens position detection data
- Iris position detection data
- Zoom lens position detection data

These detection data are handled and stored by the microprocessor, lens by lens, into the E2PROM.

Therefore, in the following cases, the auto-focus function adjustment is required:

- When the lens has been replaced
- When the CCD has been replaced
- When the E²PROM (located on the lens unit)

1) Shifting to the auto-focus function adjustment mode

Set the data for the address "02FE" to "□□01."

This makes the screen fade temporarily in white and shifts to the auto-focus function adjustment mode.

- * When this adjustment mode has been shifted to, make the adjustments according to (5) Camera unit adjustment procedure.
- * In this adjustment mode, the lens can not be operated.

2) Shifting to the normal operation mode

Set the data for the address "02FE" to "□□FF."

This makes the screen fade temporarily in white and shifts to the normal operation mode.

Press the "CONTINUE" key, and the "CAM ADJ" display goes out of the screen, enabling the normal operation.

(4) Camera signal system adjustment mode

In the camera signal system adjustment mode, the automatic white balance is disabled to allow for the adjustment of the camera unit. At this time, the white balance mode is fixed at the INDOORS mode and the focus mode is switched to the manual focus mode.

1) Shifting to the camera signal system adjustment mode

Set the data for the address "02FE" to "□□00."

This shifts the mode to the auto-focus function adjustment mode.

- * When this adjustment mode has been shifted to, make the adjustments according to (5) Camera unit adjustment procedure.

2) Shifting to the normal operation mode

Set the data for the address "02FE" to "[] [] FF".

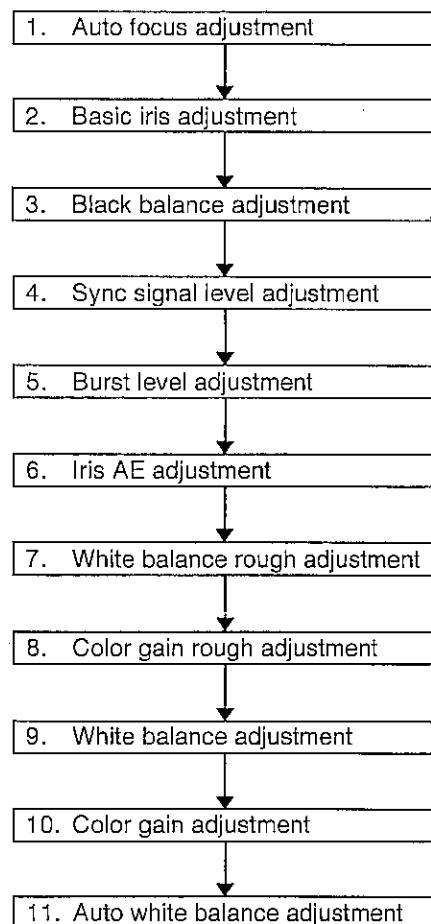

This shifts the mode to the normal operation mode.

Press the "CONTINUE" key, and the "CAM ADJ" display goes out of the screen, enabling the normal operation.

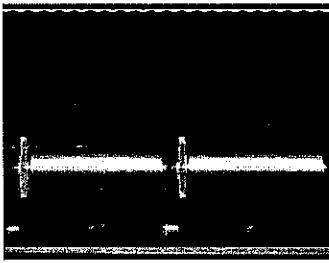

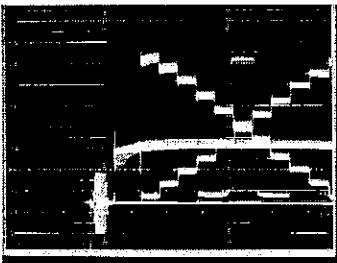

(5) Camera unit adjustment procedure

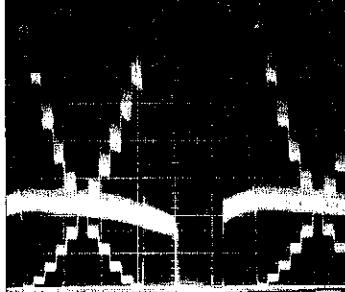

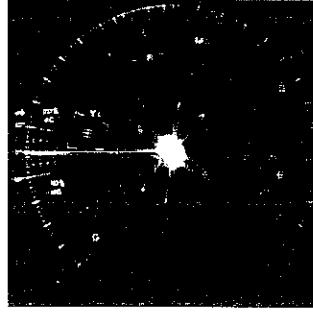

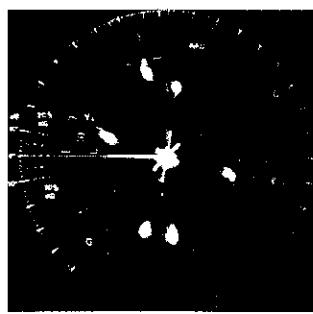

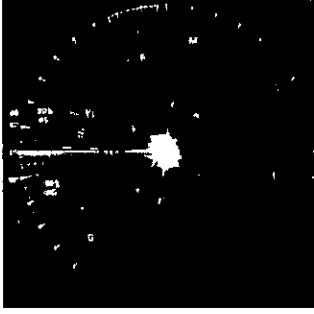

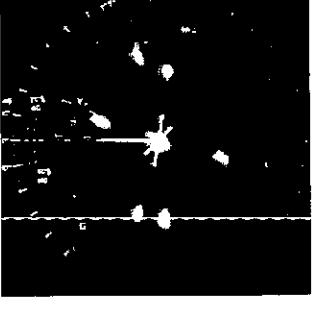

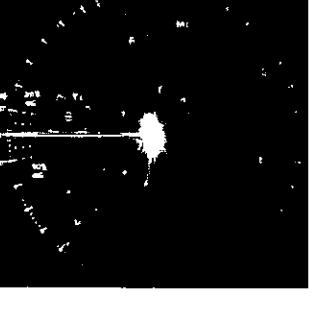

* The above 1. Auto-focus function adjustment and 2. Iris basic adjustment are performed in the auto-focus function adjustment mode, whereas the other adjustments are made in the camera signal system adjustment mode.

10-2-4. Adjustment procedures

Item	Adjustment procedure												
(1) Auto focus adjustment	<p>Set the unit to the auto-focus function adjustment mode and write data to the address "02FF" one after another. This executes the adjustments automatically. The items to be adjusted are as listed below. Every time an adjustment is made properly, the data "FF" is written to the address. After each adjustment, make sure that the adjustment has been made properly, and then go on to the next adjustment item.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th style="text-align: center;">Address</th><th style="text-align: center;">Data</th><th style="text-align: center;">Adjustment item</th></tr> </thead> <tbody> <tr> <td style="text-align: center;">02FF</td><td style="text-align: center;">000C</td><td>Linearity adjustment</td></tr> <tr> <td></td><td style="text-align: center;">0006</td><td>WIDE end focus ∞ position adjustment</td></tr> <tr> <td></td><td style="text-align: center;">0008</td><td>TELE end focus ∞ position adjustment</td></tr> </tbody> </table> <p>Note 1: To adjustment of ∞ position is executed by actually picking up the image of subject. For this adjustment use the subject with clear profile. Especially, if the adjustment of TELE end focus ∞ position is made without picking up the image of remote subject, adjustment failure may occur.</p> <p>Adjustment of WIDE end focus ∞ position: 3 m or more Adjustment of TELE end focus ∞ position: 50 m or more</p> <p>Note 2: In case of ∞ position adjustment the field depth is important to ensure the adjustment accuracy. If the field depth is high, the focus becomes too stable, which may cause incorrect adjustment of ∞ position. Therefore the adjustment must be made with low field depth (with iris opened). Iris can be released through the use of a high-speed shutter, in the following manner.</p> <ol style="list-style-type: none"> 1. Return to the normal operation mode. 2. Click the high-speed shutter in the normal operation mode until the iris is released. (See the instruction manual.) 3. Display "CMA ADJ" in the screen with the remote control for servicing. 4. Shift to the auto-focus function adjustment mode. 5. Make the ∞ position adjustments. 6. After the adjustments, return the high-speed shutter to the normal mode. 	Address	Data	Adjustment item	02FF	000C	Linearity adjustment		0006	WIDE end focus ∞ position adjustment		0008	TELE end focus ∞ position adjustment
Address	Data	Adjustment item											
02FF	000C	Linearity adjustment											
	0006	WIDE end focus ∞ position adjustment											
	0008	TELE end focus ∞ position adjustment											
(2) Iris basic adjustment	<p>This is for adjusting the operating point of the hole element installed in the iris meter of the lens.</p> <p>Set the unit to the auto-focus function adjustment mode and write data to the address "02FF" one after another. This executes the adjustments automatically. The items to be adjusted are as listed below. Every time an adjustment is made properly, the data "00FF" is written to the address.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th style="text-align: center;">Address</th><th style="text-align: center;">Data</th><th style="text-align: center;">Adjustment item</th></tr> </thead> <tbody> <tr> <td style="text-align: center;">02FF</td><td style="text-align: center;">0009</td><td>Hall offset adjustment</td></tr> <tr> <td></td><td style="text-align: center;">000A</td><td>Iris offset adjustment</td></tr> <tr> <td></td><td style="text-align: center;">000B</td><td>Iris close adjustment</td></tr> </tbody> </table>	Address	Data	Adjustment item	02FF	0009	Hall offset adjustment		000A	Iris offset adjustment		000B	Iris close adjustment
Address	Data	Adjustment item											
02FF	0009	Hall offset adjustment											
	000A	Iris offset adjustment											
	000B	Iris close adjustment											

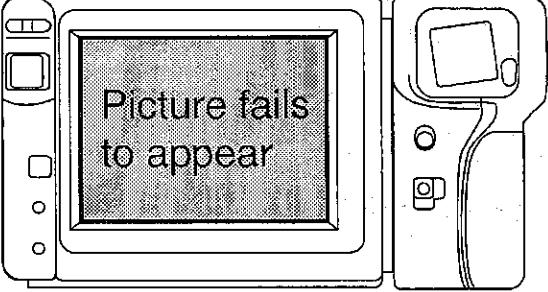

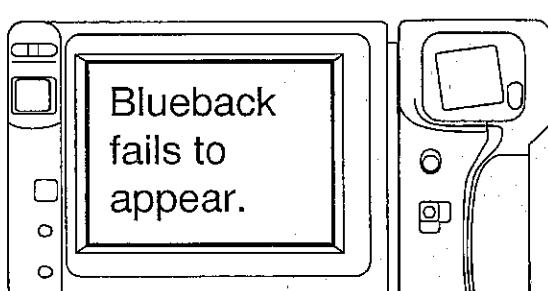

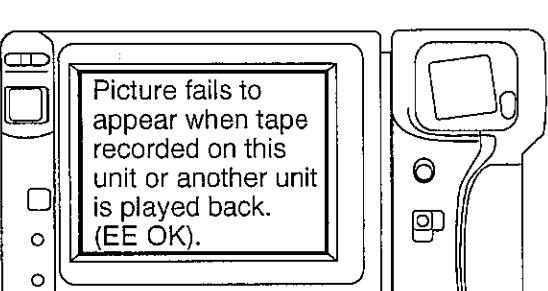

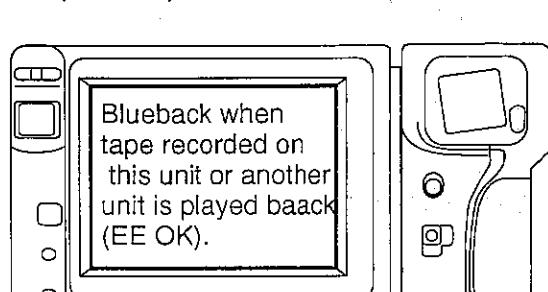

Item	Adjustment procedure														
(3) Black balance adjustment	<p>1) Prior to the adjustment, initialize the data for the addresses "01E4" thru "01E9." Write "□□FF" (the last two digits are effective) to all of these addresses.</p> <p>2) In the camera signal system adjustment mode (the data "□□00" is written to the address "02FE), write the data "□□01" to the address "02FF". This starts the adjustment automatically. When the adjustment is completed properly, the data "00FF" is written automatically.</p> <p>3) Calculate the data.</p> <table border="1" data-bbox="706 444 1254 668"> <thead> <tr> <th data-bbox="706 444 815 488">Address</th><th data-bbox="815 444 1254 488">Processing</th></tr> </thead> <tbody> <tr> <td data-bbox="706 488 815 522">01E4</td><td data-bbox="815 488 1254 522">Written data minus 08 (subtraction)</td></tr> <tr> <td data-bbox="706 522 815 556">01E5</td><td data-bbox="815 522 1254 556">Written data minus 05 (subtraction)</td></tr> <tr> <td data-bbox="706 556 815 589">01E6</td><td data-bbox="815 556 1254 589">Written data minus 17 (subtraction)</td></tr> <tr> <td data-bbox="706 589 815 623">01E7</td><td data-bbox="815 589 1254 623">Written data minus 08 (subtraction)</td></tr> <tr> <td data-bbox="706 623 815 657">01E8</td><td data-bbox="815 623 1254 657">Written data minus 08 (subtraction)</td></tr> <tr> <td data-bbox="706 657 815 690">01E9</td><td data-bbox="815 657 1254 690">Written data minus 17 (subtraction)</td></tr> </tbody> </table>	Address	Processing	01E4	Written data minus 08 (subtraction)	01E5	Written data minus 05 (subtraction)	01E6	Written data minus 17 (subtraction)	01E7	Written data minus 08 (subtraction)	01E8	Written data minus 08 (subtraction)	01E9	Written data minus 17 (subtraction)

22. PARTS LIST

PARTS REPLACEMENT

Parts marked with "▲" are important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

Les pieces marquées "▲" sont importantes pour maintenir la sécurité de l'appareil. Ne remplacer ces pieces que par des pieces dont le numéro est spécifié pour maintenir la sécurité et protéger le bon fonctionnement de l'appareil.

"HOW TO ORDER REPLACEMENT PARTS"

To have your order filled promptly and correctly, please furnish the following informations.

- | | |
|-----------------|----------------|
| 1. MODEL NUMBER | 2. REF. NO. |
| 3. PART NO. | 4. DESCRIPTION |
| 5. CODE | 6. QUANTITY |

in USA: Contact your nearest SHARP Parts Distributor.
For location of SHARP Parts Distributor,
Please call Toll-Free; 1-800-BE-SHARP

in CANADA: Contact SHARP Electronics of Canada Limited
Phone (416) 890-2100.
